Brief Contents

Preface 19

PART I Conceptual Foundations of Accounting Information Systems 27

CHAPTER 1 Accounting Information Systems: An Overview 28

CHAPTER 2 Overview of Transaction Processing and Enterprise Resource Planning Systems 56

CHAPTER 3 Systems Documentation Techniques 84

PART II Data Analytics 117

CHAPTER 4 Relational Databases 118

CHAPTER 5 Introduction to Data Analytics in Accounting 162

CHAPTER 6 Transforming Data 188

CHAPTER 7 Data Analysis and Presentation 214

PART III Control of Accounting Information Systems 247

CHAPTER 8 Fraud and Errors 248

CHAPTER 9 Computer Fraud and Abuse Techniques 282

CHAPTER 10 Control and Accounting Information Systems 322

CHAPTER 11 Controls for Information Security 360

CHAPTER 12 Confidentiality and Privacy Controls 394

CHAPTER 13 Processing Integrity and Availability Controls 422

PART IV Accounting Information Systems Applications 451

CHAPTER 14 The Revenue Cycle: Sales to Cash Collections 452

CHAPTER 15 The Expenditure Cycle: Purchasing to Cash Disbursements 494

CHAPTER 16 The Production Cycle 532

CHAPTER 17 The Human Resources Management and Payroll Cycle 562

CHAPTER 18 General Ledger and Reporting System 592

PART V The REA Data Model 625

CHAPTER 19 Database Design Using the REA Data Model 626

CHAPTER 20 Implementing an REA Model in a Relational Database 660

CHAPTER 21 Special Topics in REA Modeling 684

PART VI The Systems Development Process 717

CHAPTER 22 Introduction to Systems Development and Systems Analysis 718

CHAPTER 23 AIS Development Strategies 754

CHAPTER 24 Systems Design, Implementation, and Operation 784

Glossary 812

Contents

Preface 19

PART I Conceptual Foundations of Accounting Information Systems 27

CHAPTER 1 Accounting Information Systems: An Overview 28

Introduction 29

Information Needs and Business Processes 31

Information Needs 32

Business Processes 33

Accounting Information Systems 36

How an AIS Can Add Value to an Organization 37

An AIS Can Use Artificial Intelligence and Data Analytics
to Improve Decision Making 38

The AIS and Blockchain 40

Cloud Computing, Virtualization, and the Internet of Things 44

The AIS and Corporate Strategy 44

The Role of the AIS in the Value Chain 45

Summary and Case Conclusion 46 ■ Key Terms 47

AIS IN ACTION: Chapter Quiz 47 ■ Discussion Questions 48 ■ Problems 49 ■

AIS IN ACTION SOLUTIONS: Quiz Key 54

CHAPTER 2 Overview of Transaction Processing and Enterprise Resource Planning Systems 56

Introduction 57

Transaction Processing: The Data Processing Cycle 58

Data Input 58

Data Storage 59

Data Processing 65

Information Output 65

Transaction Processing: Blockchain 67

Enterprise Resource Planning (ERP) Systems 68

Summary and Case Conclusion 71 ■ Key Terms 71

AIS IN ACTION: Chapter Quiz 71 ■ Discussion Questions 72 ■ Problems 73

CASE 2-1 Bar Harbor Blueberry Farm 79

CASE 2-2 SDC 80

AIS IN ACTION SOLUTIONS: Quiz Key 81

CHAPTER 3 Systems Documentation Techniques 84**Introduction 85****Business Process Diagrams 86****Flowcharts 89**

Types of Flowcharts 91

Program Flowcharts 94

Data Flow Diagrams 95

Subdividing the DFD 97

Summary and Case Conclusion 100 ■ Key Terms 100

AIS IN ACTION: Chapter Quiz 101 ■ Comprehensive Problem 102 ■

Discussion Questions 102 ■ Problems 102

CASE 3-1 Dub 5 107**AIS IN ACTION SOLUTIONS:** Quiz Key 108 ■ Comprehensive Problem Solution 110**PART II Data Analytics 117****CHAPTER 4 Relational Databases 118****Introduction 118****Databases and Files 119**

Using Data Warehouses for Data Analytics 121

The Advantages of Database Systems 121

The Importance of Good Data 122

Database Systems 122

Logical and Physical Views of Data 122

Schemas 123

The Data Dictionary 124

DBMS Languages 126

Relational Databases 126

Types of Attributes 127

Designing a Relational Database for S&S, Inc. 127

Basic Requirements of a Relational Database 129

Two Approaches to Database Design 131

Creating Relational Database Queries 131

Query 1 131

Query 2 134

Query 3 137

Query 4 137

Query 5 139

Database Systems and the Future of Accounting 140

Summary and Case Conclusion 142 ■ Key Terms 142

AIS IN ACTION: Chapter Quiz 142 ■ Comprehensive Problem 143 ■

Discussion Questions 144 ■ Problems 145

CASE 4-1 Research Project 153**AIS IN ACTION SOLUTIONS:** Quiz Key 154 ■ Comprehensive Problem Solution 155

Appendix: Data Normalization 158 ■ Summary 161

CHAPTER 5 Introduction to Data Analytics in Accounting 162**Introduction 163****Ask the Right Questions 165****Extract, Transform, and Load Relevant Data 165**

Extracting Data 166

Transforming Data 169

Loading Data 170

Apply Appropriate Data Analytic Techniques 171
Interpret and Share the Results with Stakeholders 172

Interpreting Results 172

Sharing Results 173

Additional Data Analytics Considerations 174

Automation 174

Data Analytics Is Not Always the Right Tool 176

Summary and Case Conclusion 176 ■ Key Terms 176

AIS IN ACTION: Chapter Quiz 177 ■ Discussion Questions 178 ■ Problems 178

CASE 5-1 Robotic Process Automation—Wood’s Amazing Woods Inc. 183

AIS IN ACTION SOLUTIONS: Quiz Key 185

CHAPTER 6 Transforming Data 188

Introduction 189

Attributes of High-Quality Data 190

Data Structuring 191

Aggregate Data 191

Data Joining 192

Data Pivoting 192

Data Standardization 193

Data Parsing and Data Concatenation 193

Cryptic Data Values 195

Misfielded Data Values 196

Data Formatting and Data Consistency 196

Data Cleaning 198

Data De-Duplication 198

Data Filtering 198

Data Contradiction Errors 199

Data Threshold Violations 199

Violated Attribute Dependencies 200

Data Entry Errors 200

Data Validation 200

Visual Inspection 201

Basic Statistical Tests 201

Audit a Sample 201

Advanced Testing Techniques 202

Summary and Case Conclusion 202 ■ Key Terms 202

AIS IN ACTION: Chapter Quiz 203 ■ Discussion Questions 204 ■ Problems 204

CASE 6-1 Hotel Data Cleaning Case 209

AIS IN ACTION SOLUTIONS: Quiz Key 210

CHAPTER 7 Data Analysis and Presentation 214

Introduction 215

Data Analysis 215

Descriptive Analytics 215

Diagnostic Analytics 217

Predictive Analytics 219

Prescriptive Analytics 220

Common Problems with Data Analytics 220

Data Presentation 222

Choosing the Right Visualization 222

Designing High-Quality Visualizations 225

Summary and Case Conclusion 235 ■ Key Terms 235

 AIS IN ACTION: Chapter Quiz	236	■ Discussion Questions	237	■ Problems	237
 CASE 7-1 Analyzing Gamified Training	241				
 CASE 7-1 Appendix	242				
 ANALYTICS MINDSET Gamification	243				
 AIS IN ACTION SOLUTIONS: Quiz Key	244				

PART III Control of Accounting Information Systems 247

CHAPTER 8 Fraud and Errors 248

Introduction 249

AIS Threats 249

Natural and Political Disasters 249

Software Errors and Equipment Malfunctions 251

Unintentional Errors 251

Intentional Acts 252

Introduction to Fraud 253

Misappropriation of Assets 254

Fraudulent Financial Reporting 255

SAS No. 99 (AU-C Section 240): The Auditor's Responsibility to Detect Fraud 255

Who Perpetrates Fraud and Why 256

The Fraud Triangle 256

Computer Fraud 261

The Rise in Computer Fraud 261

Computer Fraud Classifications 262

Preventing and Detecting Fraud and Abuse 264

Using Data Analytics to Prevent and Detect Fraud 266

Summary and Case Conclusion 268 ■ Key Terms 269

AIS IN ACTION: Chapter Quiz 269 ■ Discussion Questions 270 ■ Problems 271

CASE 8-1 David L. Miller: Portrait of a White-Collar Criminal 276

CASE 8-2 Heirloom Photo Plans 277

AIS IN ACTION SOLUTIONS: Quiz Key 279

CHAPTER 9 Computer Fraud and Abuse Techniques 282

Introduction 282

Computer Attacks and Abuse 283

Social Engineering 292

Malware 296

Summary and Case Conclusion 305 ■ Key Terms 306

AIS IN ACTION: Chapter Quiz 306 ■ Discussion Questions 307 ■ Problems 308

CASE 9-1 Shadowcrew 318

AIS IN ACTION SOLUTIONS: Quiz Key 319

CHAPTER 10 Control and Accounting Information Systems 322

Introduction 323

Why Threats to Accounting Information Systems Are Increasing 323

Overview of Control Concepts 324

The Foreign Corrupt Practices and Sarbanes–Oxley Acts 325

Control Frameworks 326

COBIT Framework 326

COSO'S Internal Control Framework 328

The Control Environment 330

Management's Philosophy, Operating Style, and Risk Appetite 331

Commitment to Integrity, Ethical Values, and Competence 331

Internal Control Oversight by the Board of Directors 332

- Organizational Structure 332
- Methods of Assigning Authority and Responsibility 332
- Human Resources Standards That Attract, Develop, and Retain Competent Individuals 333
- External Influences 334

Risk Assessment and Risk Response 335

- Estimate Likelihood and Impact 335
- Identify Controls 335
- Estimate Costs and Benefits 335
- Determine Cost/Benefit Effectiveness 336
- Implement Control or Accept, Share, or Avoid the Risk 337

Control Activities 337

- Proper Authorization of Transactions and Activities 337
- Segregation of Duties 338
- Project Development and Acquisition Controls 341
- Change Management Controls 342
- Design and Use of Documents and Records 342
- Safeguard Assets, Records, and Data 342
- Independent Checks on Performance 343

Communicate Information and Monitor Control

Processes 344

- Information and Communication 344
- Monitoring 345

Summary and Case Conclusion 347 ■ Key Terms 348

AIS IN ACTION: Chapter Quiz 348 ■ Discussion Questions 350 ■ Problems 350

CASE 10-1 The Greater Providence Deposit & Trust Embezzlement 356

AIS IN ACTION SOLUTIONS: Quiz Key 357

CHAPTER 11 Controls for Information Security 360

Introduction 361

Three Fundamental Information Security Concepts 362

1. Security Is a Management Issue, Not Just a Technology Issue 362
2. People: The Critical Factor 364
3. The Time-Based Model of Information Security 365

Protecting Information Resources 367

- Physical Security: Access Controls 367
- Process: User Access Controls 368
- IT Solutions: Antimalware Controls 372
- IT Solutions: Network Access Controls 372
- IT Solutions: Device and Software Hardening Controls 377
- IT Solutions: Encryption 379

Detecting Attacks 379

- Log Analysis 379
- Intrusion Detection Systems 380
- Honeypots 380
- Continuous Monitoring 380

Responding to Attacks 381

- Computer Incident Response Team (CIRT) 381
- Chief Information Security Officer (CISO) 381

Monitor and Revise Security Solutions 382

- Penetration Testing 382
- Change Controls and Change Management 382

Security Implications of Virtualization, Cloud Computing, and the Internet of Things 383

Summary and Case Conclusion 384 ■ Key Terms 384

AIS IN ACTION: Chapter Quiz 385 ■ Discussion Questions 386 ■ Problems 386
CASE 11-1 Assessing Change Control and Change Management 391
CASE 11-2 Research Project 391
AIS IN ACTION SOLUTIONS: Quiz Key 391

CHAPTER 12 Confidentiality and Privacy Controls 394

Introduction 395

Protecting Confidentiality and Privacy 395

Identify and Classify Information to Be Protected 396
 Protecting Sensitive Information with Encryption 396
 Controlling Access to Sensitive Information 396
 Training 398

Privacy Regulations and Generally Accepted Privacy Principles 398

The EU's GDPR and U.S. Laws 398
 Generally Accepted Privacy Principles 399

Encryption 402

Factors That Influence Encryption Strength 403
 Types of Encryption Systems 403
 Virtual Private Networks (VPNs) 405

Hashing 406

Digital Signatures 407
 Digital Certificates and Public Key Infrastructure 408
 Blockchain 409

Summary and Case Conclusion 412 ■ Key Terms 412

AIS IN ACTION: Chapter Quiz 412 ■ Discussion Questions 414 ■ Problems 414

CASE 12-1 Protecting Privacy of Tax Returns 418

CASE 12-2 Generally Accepted Privacy Principles 419

AIS IN ACTION SOLUTIONS: Quiz Key 419

CHAPTER 13 Processing Integrity and Availability Controls 422

Introduction 422

Processing Integrity 423

Input Controls 423
 Processing Controls 425
 Output Controls 426
 Illustrative Example: Credit Sales Processing 427
 Processing Integrity Controls in Spreadsheets 429

Availability 429

Minimizing Risk of System Downtime 429
 Recovery and Resumption of Normal Operations 430

Summary and Case Conclusion 435 ■ Key Terms 436

AIS IN ACTION: Chapter Quiz 436 ■ Discussion Questions 437 ■ Problems 438

CASE 13-1 Ensuring Systems Availability 447

CASE 13-2 Ensuring Process Integrity in Spreadsheets 447

AIS IN ACTION SOLUTIONS: Quiz Key 448

PART IV Accounting Information Systems Applications 451

CHAPTER 14 The Revenue Cycle: Sales to Cash Collections 452

Introduction 454

Revenue Cycle Information System 456

Process 456
 Threats and Controls 456

Sales Order Entry 459

- Taking Customer Orders 460
- Credit Approval 462
- Checking Inventory Availability 464
- Responding to Customer Inquiries 465

Shipping 467

- Pick and Pack the Order 467
- Ship the Order 469

Billing 471

- Invoicing 472
- Maintain Accounts Receivable 474

Cash Collections 477

- Process 477
- Threats and Controls 478

Summary and Case Conclusion 480 ■ Key Terms 481

AIS IN ACTION: Chapter Quiz 481 ■ Discussion Questions 482 ■ Problems 482

CASE 14-1 Research Project: The Use of RFID in Retail 491

AIS IN ACTION SOLUTIONS: Quiz Key 491

CHAPTER 15 The Expenditure Cycle: Purchasing to Cash Disbursements 494

Introduction 495**Expenditure Cycle Information System 496**

- Process 496
- Threats and Controls 499

Ordering Materials, Supplies, and Services 503

- Identifying What, When, and How Much to Purchase 503
- Choosing Suppliers 505

Receiving 509

- Process 510
- Threats and Controls 511

Approving Supplier Invoices 512

- Process 512
- Threats and Controls 515

Cash Disbursements 515

- Process 515
- Threats and Controls 515

Summary and Case Conclusion 518 ■ Key Terms 519

AIS IN ACTION: Chapter Quiz 519 ■ Discussion Questions 520 ■ Problems 520

CASE 15-1 Group Case Analysis: School District Expenditure Fraud 529

CASE 15-2 Anatomy of a Multi-Million Dollar Embezzlement at ING Bank 529

AIS IN ACTION SOLUTIONS: Quiz Key 530

CHAPTER 16 The Production Cycle 532

Introduction 533**Production Cycle Information System 535**

- Process 536
- Threats and Controls 536

Product Design 537

- Process 537
- Threats and Controls 539

Planning and Scheduling 539

- Production Planning Methods 539

Key Documents and Forms 539

Threats and Controls 543

Production Operations 544

Threats and Controls 544

Cost Accounting 546

Process 546

Threats and Controls 547

Summary and Case Conclusion 552 ■ Key Terms 553

AIS IN ACTION: Chapter Quiz 553 ■ Discussion Questions 554 ■ Problems 555

CASE 16-1 The Accountant and CIM 559

AIS IN ACTION SOLUTIONS: Quiz Key 559

CHAPTER 17 The Human Resources Management and Payroll Cycle 562

Introduction 563

HRM/Payroll Cycle Information System 564

Overview of HRM Process and Information Needs 564

Threats and Controls 566

Payroll Cycle Activities 569

Update Payroll Master Database 570

Validate Time and Attendance Data 571

Prepare Payroll 573

Disburse Payroll 577

Calculate and Disburse Employer-Paid Benefits, Taxes, and Voluntary Employee Deductions 579

Outsourcing Options: Payroll Service Bureaus and Professional Employer Organizations 579

Summary and Case Conclusion 580 ■ Key Terms 581

AIS IN ACTION: Chapter Quiz 581 ■ Discussion Questions 582 ■ Problems 583

CASE 17-1 Excel Project: Sorting and Grouping Data 589

AIS IN ACTION SOLUTIONS: Quiz Key 589

CHAPTER 18 General Ledger and Reporting System 592

Introduction 593

General Ledger and Reporting System 594

Process 595

Threats and Controls 595

Update General Ledger 597

Process 597

Threats and Controls 598

Post Adjusting Entries 600

Process 601

Threats and Controls 602

Prepare Financial Statements 602

Process 602

Threats and Controls 609

Produce Managerial Reports 610

Process 610

Threats and Controls 610

Summary and Case Conclusion 614 ■ Key Terms 614

AIS IN ACTION: Chapter Quiz 615 ■ Discussion Questions 616 ■ Problems 616

CASE 18-1 Exploring iXBRL Viewers 621

CASE 18-2 Evaluating a General Ledger Package 621

AIS IN ACTION SOLUTIONS: Quiz Key 622

PART V The REA Data Model 625

CHAPTER 19 Database Design Using the REA Data Model 626

Introduction 626

Database Design Process 627

Entity-Relationship Diagrams 628

The REA Data Model 629

Three Basic Types of Entities 630

Structuring Relationships: The Basic REA Template 630

Developing an REA Diagram 633

Step 1: Identify Relevant Events 633

Step 2: Identify Resources and Agents 635

Step 3: Determine Cardinalities of Relationships 636

What an REA Diagram Reveals About an Organization 640

Business Meaning of Cardinalities 640

Uniqueness of REA Diagrams 641

Summary and Case Conclusion 642 ■ Key Terms 643

AIS IN ACTION: Chapter Quiz 643 ■ Comprehensive Problem 646 ■

Discussion Questions 646 ■ Problems 647

CASE 19-1 REA Data Modeling Extension 651

AIS IN ACTION SOLUTIONS: Quiz Key 652 ■ Comprehensive Problem Solution 656

CHAPTER 20 Implementing an REA Model in a Relational Database 660

Introduction 661

Integrating REA Diagrams Across Cycles 661

Merging Redundant Resource Entities 664

Merging Redundant Event Entities 665

Validating the Accuracy of Integrated REA Diagrams 666

Implementing an REA Diagram in a Relational Database 666

Step 1: Create Tables for Each Distinct Entity and M:N Relationship 666

Step 2: Assign Attributes to Each Table 668

Step 3: Use Foreign Keys to Implement 1:1 and 1:N Relationships 669

Completeness Check 670

Using REA Diagrams to Retrieve Information from a Database 671

Creating Journals and Ledgers 671

Generating Financial Statements 672

Creating Managerial Reports 673

Summary and Case Conclusion 673 ■ Key Term 674

AIS IN ACTION: Chapter Quiz 674 ■ Comprehensive Problem 675 ■

Discussion Questions 675 ■ Problems 676

CASE 20-1 Practical Database Design 678

AIS IN ACTION SOLUTIONS: Quiz Key 679 ■ Comprehensive Problem Solution 681

CHAPTER 21 Special Topics in REA Modeling 684

Introduction 685

Additional Revenue and Expenditure Cycle Modeling Topics 685

Additional Revenue Cycle Events and Attribute Placement 685

Additional Expenditure Cycle Events and Attribute Placement 687

Sale of Services 690

Acquisition of Intangible Services 690

Digital Assets 691

Rental Transactions 691

Additional REA Features 693

- Employee Roles 693
- M:N Agent–Event Relationships 693
- Locations 693
- Relationships Between Resources and Agents 693

Production Cycle REA Model 694

- Additional Entities—Intellectual Property 694
- Production Cycle Events 696
- New REA Feature 696

Combined HR/Payroll Data Model 697

- HR Cycle Entities 697
- Tracking Employees' Time 698

Financing Activities Data Model 699

Summary and Case Conclusion 700

AI IN ACTION: Chapter Quiz 703 ■ Discussion Questions 704 ■ Problems 705

CASE 21-1 Practical Database Assignment 710

AI IN ACTION SOLUTIONS: Quiz Key 710

Appendix: Extending the REA Model to Include Information About Policies 714

PART VI The Systems Development Process 717

CHAPTER 22 Introduction to Systems Development and Systems Analysis 718

Introduction 719**Systems Development 721**

- The Systems Development Life Cycle 721
- The Players 722

Planning Systems Development 723

- Planning Techniques 725

Feasibility Analysis 725

- Capital Budgeting: Calculating Economic Feasibility 726

Behavioral Aspects of Change 727

- Why Behavioral Problems Occur 728
- How People Resist Change 728
- Preventing Behavioral Problems 729

Systems Analysis 730

- Initial Investigation 730
- Systems Survey 732
- Feasibility Study 733
- Information Needs and Systems Requirements 733
- Systems Analysis Report 735

Summary and Case Conclusion 736 ■ Key Terms 737

AI IN ACTION: Chapter Quiz 738 ■ Comprehensive Problem 739 ■

Discussion Questions 739 ■ Problems 740

CASE 22-1 Audio Visual Corporation 749

AI IN ACTION SOLUTIONS: Quiz Key 750 ■ Comprehensive Problem Solution 752

CHAPTER 23 AIS Development Strategies 754

Introduction 755**Purchasing Software 755**

- Selecting a Vendor 756

Acquiring Hardware and Software 756

Evaluating Proposals and Selecting a System 757

Development by In-House Information Systems Departments 759

End-User-Developed Software 759

Advantages and Disadvantages of End-User Computing 760

Managing and Controlling End-User Computing 761

Outsourcing the System 762

Advantages and Disadvantages of Outsourcing 762

Methods for Improving Systems Development 763

Business Process Management 764

Prototyping 765

Agile Methodologies 767

Computer-Aided Software Engineering 770

Summary and Case Conclusion 771 ■ Key Terms 771

AIS IN ACTION: Chapter Quiz 772 ■ Comprehensive Problem 773 ■

Discussion Questions 773 ■ Problems 774

CASE 23-1 Wong Engineering Corp. 778

AIS IN ACTION SOLUTIONS: Quiz Key 779 ■ Comprehensive Problem Solution 782

CHAPTER 24 Systems Design, Implementation, and Operation 784

Introduction 785

Conceptual Systems Design 785

Evaluate Design Alternatives 785

Prepare Design Specifications and Reports 787

Physical Systems Design 787

Output Design 788

File and Database Design 788

Input Design 789

Program Design 790

Procedures and Controls Design 791

Systems Implementation 792

Implementation Planning and Site Preparation 792

Selecting and Training Personnel 793

Complete Documentation 794

Testing the System 794

Systems Conversion 795

Operation and Maintenance 796

Summary and Case Conclusion 797 ■ Key Terms 798

AIS IN ACTION: Chapter Quiz 798 ■ Comprehensive Problem 799 ■

Discussion Questions 800 ■ Problems 801

CASE 24-1 Citizen's Gas Company 807

AIS IN ACTION SOLUTIONS: Quiz Key 807 ■ Comprehensive Problem Solution 809

Preface

New to This Edition

INTRODUCING TWO NEW CO-AUTHORS

Scott L. Summers and David A. Wood, both from Brigham Young University, joined as new co-authors. Scott and David created the new section on data analytics (Part II), consisting of four chapters. The first chapter is an update of Chapter 4 that discusses relational databases not only as the basis for transaction processing systems, but also as one of the sources of Big Data and Analytics. The next three chapters (Chapters 5–7) discuss the Extract, Transfer, and Load (ETL) process and various data analytic techniques. This new content covers an extremely important topic that affects all aspects of designing, using, managing, and auditing an AIS.

ENHANCEMENTS IN THE FIFTEENTH EDITION

We made extensive revisions to the content of the material to incorporate recent developments while retaining the features that have made prior editions easy to use. Every chapter has been revised to include up-to-date examples of important concepts. Specific changes include the following:

1. Introduced several new topics in Chapter 1. The chapter discusses how an AIS can use artificial intelligence and data analytics to improve decision making, how the AIS is affected by blockchain technology, and the use of cloud computing, virtualization, and the internet of things.
2. Shortened and simplified the discussion of computer fraud and abuse techniques by eliminating many of the less frequently used techniques.
3. Simplified the discussion of control and the AIS by using the COSO Internal Control framework instead of the COSO Enterprise Risk Management framework as the structure for discussing controls.
4. Updated the discussion of information security countermeasures.
5. Updated the discussion of transaction processing and encryption to include blockchain technology.
6. Updated the discussion of privacy to include the EU's General Data Privacy Regulation (GDPR).
7. Updated the end-of-chapter discussion questions and problems, including Excel exercises that are based on articles from the *Journal of Accountancy* so that students can develop the specific skills used by practitioners. Most chapters also include a problem that consists of multiple-choice questions we have used in our exams to provide students with an additional chance to check how well they understand the chapter material.
8. Moved the topic of auditing (Chapter 11 in the fourteenth edition) to a web-only appendix because most of that material is covered in other courses.

Solving Learning and Teaching Challenges

STRUCTURED LEARNING

KEY LEARNING OBJECTIVES When you finish reading this text, you should understand the following key concepts:

- Basic activities performed in major business cycles.
- What data needs to be collected to enable managers to plan, evaluate, and control an organization's business activities.
- How to extract, transfer, and load (ETL) data from both the organization's AIS and other sources into a common repository that can be used for data analytics.
- How IT developments can improve the efficiency and effectiveness of business processes.
- How to design an AIS to provide the information needed to make key decisions in each business cycle.
- Risk of fraud and motives and techniques used to perpetrate fraud.
- COSO's models (Internal Control and ERM) for internal control and risk management as well as specific controls used to achieve these objectives.
- Control Objectives for Information and Related Technology (COBIT) framework for the effective governance and control of information systems and how IT affects the implementation of internal controls.
- AICPA's Trust Services framework for ensuring systems reliability by developing procedures to protect the confidentiality of proprietary information, maintain the privacy of personally identifying information collected from customers, assure the availability of information resources, and provide for information processing integrity.
- Fundamentals of information security.
- Fundamental concepts of database technology and data modeling and their effect on an AIS.
- Tools for documenting AIS work, such as REA diagrams, business processing diagrams, data flow diagrams, and flowcharts.
- Basic steps in the system development process to design and improve an AIS.

FEATURES TO FACILITATE LEARNING To help students understand these concepts, the text includes the following features:

1. **Each chapter begins with an integrated case that introduces key chapter concepts and topics and identifies several key issues or problems that students should be able to solve after mastering the material presented in that chapter.** The case is referenced throughout the chapter, and the chapter summary presents solutions to the problems and issues raised in the case.
2. **Focus boxes and real-world examples** to help students understand how companies use the latest IT developments to improve their AIS.
3. **Hands-on Excel exercises in many chapters** to help students hone their computer skills. Many of these exercises are based on "how-to" tutorials that appeared in recent issues of the *Journal of Accountancy*. Some of those articles discuss older versions of Excel, thereby giving students practice in developing the important life-long learning skill of adapting older instructions to updated versions of software.
4. **Numerous discussion questions and problems in every chapter** provide additional opportunities for students to demonstrate mastery of key concepts. Many problems were developed from reports in current periodicals. Other problems were selected from various professional examinations, including the CPA, CMA, CIA, and SMAC exams. One problem in every chapter consists of a set of multiple-choice questions to provide practice in answering exam-style questions. One or more problems where students are asked to match terms with their definitions to help students learn the terminology introduced in that chapter. **Each chapter also has one or more cases** that require more extensive exploration of specific topics.

5. **Quizzes** at the end of each chapter enable students to self-assess their understanding of the material. We also provide detailed explanations about the correct answer to each quiz question.
6. A number of chapters have a **comprehensive problem** in the AIS in Action section at the end of the chapter with the solution to the problem provided after quiz question solutions and explanations at the very end of the chapter.
7. **Extensive use of full-color graphics.** The text contains hundreds of figures, diagrams, flowcharts, and tables that illustrate chapter concepts, and color is used to highlight key points.
8. Definitions of key terms are repeated in the **glossary margins** in each chapter. In addition, a **comprehensive glossary** located at the back of the book makes it easy to look up the definition of the various technical terms used in the text.

CONTENT AND ORGANIZATION

Part I: Conceptual Foundations of Accounting Information Systems Part I consists of three chapters that present the underlying concepts fundamental to an understanding of AIS.

Chapter 1 introduces basic terminology and provides an overview of AIS topics. It discusses how an AIS can add value to an organization and how it can be used to help organizations implement corporate strategy. It also discusses the types of information companies need to successfully operate and introduces the basic business processes that produce that information. It concludes by describing the role of the AIS in an organization's value chain. It also introduces several new topics in the text: artificial intelligence, data analytics, blockchain, virtualization, cloud computing, and the Internet of Things.

Chapter 2 introduces transaction processing in automated systems and presents basic information about input/output, processing, and data storage concepts as well as the wide range of data that must be collected by the AIS. This information helps students understand what an AIS does; throughout the remainder of the book, we discuss advances in IT and how it affects the manner in which those functions are performed. The chapter discusses the impact of blockchain on transaction processing. Chapter 2 also introduces Enterprise Resource Planning (ERP) systems and their importance and uses in modern business.

Chapter 3 covers three of the most important tools and techniques used to understand, evaluate, design, and document information systems: business process diagrams, flowcharts, and data flow diagrams. Students will learn how to read, critique, and create systems documentation using these tools.

Part II: Data Analytics Part II consists of four chapters about relational databases, the ETL process, and various data analytics techniques.

Chapter 4 describes the principles of relational database design and how to use SQL to analyze the data. It also discusses how an organization's relational database used for transaction processing provides one important source of data for advanced data analytics.

Chapter 5 introduces the topic of data analysis and begins by stressing the importance of formulating and asking the right questions to obtain useful insights. It then explains the basic steps of extracting, transforming, and loading (ETL) data to be used for analytics. Next, it discusses how to choose appropriate analytic techniques and how to interpret and share the results. A discussion about the potential for automating analytics and a word of caution about the limits of what analytics can and cannot do concludes the chapter.

Chapter 6 delves into more detail about the different steps in the ETL process, focusing on how to transform data. It begins by describing the attributes that make data useful for analytics and then discusses techniques for structuring data, standardizing data being consolidated from multiple sources, cleaning data, and validating data.

Chapter 7 discusses the differences between descriptive, diagnostic, predictive, and prescriptive analytic techniques. It also describes how to choose the right visualization tools to aid in analysis and presents best practices for designing high-quality visualizations.

Part III: Control of Accounting Information Systems The six chapters in Part III focus on threats to the reliability of the AIS and applicable controls for addressing and mitigating the risks associated with those threats.

Chapter 8 introduces students to the different kinds of threats faced by information systems, primarily focusing on the threats of fraud and errors. The chapter describes the different types of fraud and explains how fraud is perpetrated, who perpetrates it, and why it occurs.

Chapter 9 discusses computer fraud and abuse techniques. Three major types of computer fraud are discussed: computer attacks and abuse, social engineering, and malware. The chapter explains the dozens of ways computer fraud and abuse can be perpetrated.

Chapter 10 uses the COSO Internal Control framework, to discuss the basic concepts of internal control. It introduces the expanded enterprise risk management (COSO-ERM) model and compares it with the COSO Internal Control framework. It also introduces the COBIT framework which applies those concepts to IT, thereby providing a foundation for effective governance and control of information systems.

Chapter 11 focuses on information security. It introduces the fundamental concepts of defense-in-depth and the time-based approach to security. The chapter provides a broad survey of a variety of security topics, including access controls, firewalls, encryption, and incident detection and response.

Chapter 12 discusses the many specific computer controls used in business organizations to achieve the objectives of ensuring privacy and confidentiality and discusses the implications of new regulations such as the EU's General Data Privacy Regulation (GDPR) and similar laws enacted by California and other states. The chapter also provides a detailed discussion of block-chain technology.

Chapter 13 addresses the controls necessary to achieve the objectives of accurate processing of information and ensuring that information is available to managers whenever and wherever they need it. It also discusses how virtualization and cloud technology are changing the methods used for backup and recovery.

Part IV: Accounting Information Systems Applications Part IV focuses on how a company's AIS provides critical support for its fundamental business processes. Most large and many medium-sized organizations use enterprise resource planning (ERP) systems to collect, process, and store data about their business processes as well as to provide information reports designed to enable managers and external parties to assess the organization's efficiency and effectiveness. To make it easier to understand how an ERP system functions, Part III consists of five chapters, each focusing on a particular business process.

Chapter 14 covers the revenue cycle (also referred to as the sales-to-cash business process), describing all the activities involved in taking customer orders, fulfilling those orders, and collecting cash.

Chapter 15 examines the expenditure cycle (also referred to as the purchase-to-pay business process), describing all the activities involved in ordering, receiving, and paying for merchandise, supplies, and services.

Chapter 16 reviews the production (manufacturing) cycle, with a special focus on the implications of recent cost accounting developments, such as activity-based costing, for the design of the production cycle information system.

Chapter 17 explains the human resources management/payroll cycle, focusing primarily on the activities involved in processing payroll.

Chapter 18 explores the general ledger and reporting activities in an organization, discussing topics such as XBRL, the balanced scorecard, and the switch from GAAP to IFRS.

Each of these five chapters explains the three basic functions performed by the AIS: efficient transaction processing, provision of adequate internal controls to safeguard assets (including data), and preparation of information useful for effective decision making.

Part V: The REA Data Model Part V consists of three chapters that focus on the REA data model, which provides a conceptual tool for designing and understanding the database underlying an AIS.

Chapter 19 introduces the REA data model and how it can be used to design an AIS database. The chapter focuses on modeling the revenue and expenditure cycles. It also demonstrates how the REA model can be used to develop an AIS that can not only generate traditional financial statements and reports but can also more fully meet the information needs of management.

Chapter 20 explains how to implement an REA data model in a relational database system. It also shows how to query a relational database to produce various financial statements and management reports.

Chapter 21 explains how to develop REA data models of the production, HR/payroll, and financing cycles. It also discusses a number of advanced modeling issues such as the acquisition and sale of intangible products and services and rental transactions.

Part VI: The Systems Development Process Part VI consists of three chapters that cover various aspects of the systems development process.

Chapter 22 introduces the systems development life cycle and discusses the introductory steps of this process (systems analysis, feasibility, and planning). Particular emphasis is placed on the behavioral ramifications of change.

Chapter 23 discusses an organization's many options for acquiring or developing an AIS (e.g., purchasing software, writing software, end-user-developed software, and outsourcing) and for speeding up or improving the development process (business process management, prototyping, agile methodologies, and computer-assisted software engineering).

Chapter 24 covers the remaining stages of the systems development life cycle (conceptual design, physical design, implementation, and operation and maintenance) and emphasizes the interrelationships among the phases.

TECHNOLOGY-REINFORCED LEARNING

Revel™

Educational Technology Designed for the Way Today's Students Read, Think, and Learn When students are engaged deeply, they learn more effectively and perform better in their courses. This simple fact inspired the creation of Revel: an interactive learning environment designed for the way today's students read, think, and learn.

Revel enlivens course content with media interactives and assessments—integrated directly within the authors' narrative—that provide opportunities for students to read, practice, and study in one continuous experience. This immersive educational technology replaces the print textbook and is designed to measurably boost students' understanding, retention, and preparedness. Learn more about Revel <http://www.pearsonhighered.com/revel/>

EXCEL HOMEWORK PROBLEMS Accountants need to become proficient with Excel because it is a useful tool for tasks related to every business process. That is why each of the chapters in the business process section contains several homework problems designed to teach new Excel skills in a context related to one of the business processes discussed in the chapter.

As with any software, Microsoft regularly releases updates to Microsoft Office, but not everyone always immediately switches. During your career you will periodically move to a newer version of Excel. When you do, you will find that sometimes you need to make only minor changes to existing spreadsheets, but other times you may have to make more significant changes because the newer version of Excel now incorporates different features and functions.

So how do you keep abreast of changes? And how can you learn new Excel skills “on the job” to simplify tasks that you now find yourself doing repeatedly? You could pay to take a course, but that can be costly, time-consuming and not always timely. Alternatively, you can develop life-long learning skills to continuously update your knowledge. One important way to do this is to begin now to save copies of two types of articles that regularly appear in the *Journal of Accountancy*. The first is the monthly column, “Technology Q&A,” which often contains answers to questions about how do you do something in a newer version of Excel that you know how to do in an older version. The second type of article is a complete tutorial about a powerful way to use one or more Excel functions to automate a recurring task. Often, this second type of article has an online spreadsheet file that you can download and use to follow along with the example and thereby teach yourself a new skill.

The *Journal of Accountancy* website maintains an archive of these articles that you can search to see if there is one that addresses a task that is new for you. Even if the article explains how to do something (such as create a pivot table) in an older version of Excel, in most cases you will find that many of the steps have not changed. For those that have, if you read the old way to do it as described in the article, you can then use Excel's built-in help feature to see how to do the same task in the newer version that you are now using.

The ability to learn how to use new versions of software on your own is an important lifelong learning skill. Indeed, recruiters are looking for evidence that a job candidate not only has acquired a body of knowledge but also knows how to research and learn new versions of existing software tools. The various Excel homework problems in this text help you learn how to do this.

From the Authors

TO THE INSTRUCTOR

This book is intended for use in a one-semester course in accounting information systems at either the undergraduate or graduate level. Introductory financial and managerial accounting courses are suggested prerequisites, and an introductory information systems course that covers a computer language or software package is helpful, but not necessary.

The book can also be used as the main text in graduate or advanced undergraduate management information systems courses.

The topics covered in this text provide information systems students with a solid understanding of transaction processing systems that they can then build on as they pursue more in-depth study of specific topics such as databases, data analytics, networks, systems analysis and design, cloud computing, virtualization, blockchain, artificial intelligence, Internet of Things, computer security, and information system controls.

TO THE STUDENT

As in previous editions, the fifteenth edition of *Accounting Information Systems* is designed to prepare you for a successful accounting career whether you enter public practice, industry, or government. All of you will be users of accounting information systems. In addition to being users, some of you will become managers. Others will become internal and external auditors, and some of you will become consultants. Regardless of your role, you will need to understand how accounting information systems work in order to effectively measure how cost-effectively they perform, to assess their reliability and that of the information produced, or to lead the redesign and implementation of new and better systems. Mastering the material presented in this text will give you the foundational knowledge you need to excel at all those tasks.

This text discusses important new IT developments, such as blockchain and data analytics, because such developments affect business processes and often cause organizations to redesign their accounting systems to take advantage of new capabilities. The focus, however, is not on IT for the sake of IT, but on how IT affects business processes and controls. Indeed, new IT developments not only bring new capabilities, but also often create new threats and affect the overall level of risk. This text will help you understand these issues so that you can properly determine how to modify accounting systems controls to effectively address those new threats and accurately assess the adequacy of controls in those redesigned systems. We also discuss the effect of recent regulatory developments, such as the EU's General Data Privacy Regulation (GDPR) and similar legislation in California and other states, on the design and operation of accounting systems.

In addition to technology- and regulatory-driven changes, companies are responding to the increasingly competitive business environment by reexamining every internal activity to reap the most value at the least cost. As a result, accountants are asked to do more than simply report the results of past activities. They must take a more proactive role in both providing and interpreting financial and nonfinancial information about the organization's

activities. Therefore, throughout this text, we discuss how accountants can improve the design and functioning of the accounting information system (AIS) so that it truly adds value to the organization by providing management with the information needed to effectively run an organization.

Acknowledgments

We wish to express our appreciation to all supplements authors for preparing the various supplements that accompany this edition. We thank Martha M. Eining of the University of Utah and Carol F. Venable of San Diego State University for preparing the comprehensive cases included on our website. We are also grateful to Iris Vessey for her contributions to the problem material. We thank Bill Heninger of Brigham Young University for allowing us to use portions of his database normalization tutorial to create the appendix to Chapter 4.

Perhaps most importantly, we are indebted to the numerous faculty members throughout the world who have adopted the earlier editions of this book and who have been generous with their suggestions for improvement. We are especially grateful to the following faculty who participated in reviewing the fifteenth edition throughout various stages of the revision process:

A. Faye Borthick, *Georgia State University*
Gerald Childs, *Waukesha County Technical College*
Steven Johnson, *Minnesota State University, Mankato*
Stanley X Lewis, *Troy University*
Andrew B. Nyaboga, *William Paterson University*
Magdy Roufaiel, *Empire State College*
Milton Shen, *University of Alabama - Huntsville*
Jennifer Tseng, *Mission College*
Thomas L. Zeller, *Loyola University Chicago*

We are grateful for permission received from four professional accounting organizations to use problems and unofficial solutions from their past professional examinations in this book. Thanks are extended to the American Institute of Certified Public Accountants for use of CPA Examination materials, to the Institute of Certified Management Accountants for use of CMA Examination materials, to the Institute of Internal Auditors for use of CIA Examination materials, and to the Society of Management Accountants of Canada for use of SMAC Examination materials. We also wish to thank Netsuite, Inc., for providing permission to use screenshots of their software throughout the text.

Of course, any errors in this book remain our responsibility. We welcome your comments and suggestions for further improvement.

Finally, we want to thank our wives and families for their love, support, and encouragement. We also want to thank God for giving us the ability to start and complete this book.

Accounting Information Systems: An Overview

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Distinguish data from information, discuss the characteristics of useful information, and explain how to determine the value of information.
2. Explain the decisions an organization makes, the information needed to make them, and the major business processes present in most companies.
3. Explain how an accounting information system (AIS) adds value to an organization, how it affects and is affected by corporate strategy, and its role in a value chain.

INTEGRATIVE CASE

S&S

After working for years as a regional manager for a retail organization, Scott Parry opened his own business with Susan Gonzalez, one of his district managers, as his partner. They formed S&S to sell appliances and consumer electronics. Scott and Susan pursued a “clicks and bricks” strategy by renting a building in a busy part of town and adding an electronic storefront.

Scott and Susan invested enough money to see them through the first six months. They will hire 15 employees within the next two weeks—three to stock the shelves, four sales representatives, six checkout clerks, and two to develop and maintain the electronic storefront.

Scott and Susan will host S&S’s grand opening in five weeks. To meet that deadline, they have to address the following important issues:

1. What decisions do they need to make to be successful and profitable? For example:
 - a. How should they price products to be competitive yet earn a profit?
 - b. Should they extend credit, and, if so, on what terms? How can they accurately track what customers owe and pay?
 - c. How should they hire, train, and supervise employees? What compensation and benefits package should they offer? How should they process payroll?
 - d. How can they track cash inflows and outflows to avoid a cash squeeze?
 - e. What is the appropriate product mix? What inventory quantities should they carry, given their limited showroom space?

Ndu/123RF

2. What information do Scott and Susan need to make those decisions?
 - a. What information do the external entities they interact with need?
 - b. What information do management and other employees need?
 - c. How can they gather, store, and disseminate that information?
3. What business processes are needed, and how should they be carried out?
4. What functionality should be provided on the website?

Although Scott and Susan could use an educated guess or “gut feeling” to make these decisions, they know they can make better decisions if they obtain additional information. A well-designed AIS can solve these issues and provide the information they need to make any remaining decisions.

Introduction

We begin this chapter by explaining important terms and discussing the kinds of information organizations need and the business processes used to produce that information. We continue with an exploration of what an accounting information system (AIS) is, how an AIS adds value to an organization, how an AIS and corporate strategy affect each other, and the role of the AIS in the value chain.

A **system** is a set of detailed methods, procedures, and routines that carry out specific activities, perform a duty, achieve goals or objectives, or solve one or more problems. Most systems are composed of smaller subsystems that support the larger system. For example, a college of business is a system composed of various departments, each of which is a subsystem. Moreover, the college itself is a subsystem of the university.

Each subsystem is designed to achieve one or more organizational goals. Changes in subsystems cannot be made without considering the effect on other subsystems and on the system as a whole. **Goal conflict** occurs when a subsystem’s goals are inconsistent with the goals of another subsystem or with the system as a whole. **Goal congruence** occurs when a subsystem achieves its goals while contributing to the organization’s overall goal. The larger the organization and the more complicated the system, the more difficult it is to achieve goal congruence.

Data are facts that are collected, recorded, stored, and processed by an information system. Businesses need to collect several kinds of data such as the activities that take place, the resources affected by the activities, and the people who participate in the activity. For example, the business needs to collect data about a sale (date, total amount), the resource sold (good or service, quantity sold, unit price), and the people who participated (customer, salesperson).

Information is data that have been organized and processed to provide meaning and context that can improve the decision-making process. As a rule, users make better decisions as the quantity and quality of information increase. Table 1-1 presents 14 characteristics that make information useful and meaningful.

system - Detailed methods, procedures, and routines that carry out activities, perform a duty, achieve goals or objectives, or solve problems.

goal conflict - When a subsystem’s goals are inconsistent with the goals of another subsystem or the system as a whole.

goal congruence - When a subsystem achieves its goals while contributing to the organization’s overall goal.

data - Facts that are collected, recorded, stored, and processed by an information system.

information - Data that have been organized and processed to provide meaning and improve decision making.

TABLE 1-1 Characteristics of Useful Information

Access restricted	Able to limit access to authorized parties
Accurate	Correct; free of error; accurately represents events and activities
Available	Available to users when needed; in a format that can be easily and quickly used
Reputable	Perceived as true and credible due to highly regarded source or content
Complete	Does not omit aspects of events or activities; of enough breadth and depth
Concise	Clear, succinct; appropriate volume presented briefly but comprehensively
Consistent	Presented in same format over time
Current	Includes event and activity data up to the present date and time
Objective	Unbiased; unprejudiced; impartial
Relevant	Reduces uncertainty; improves decision making; applicable and helpful
Timely	Provided in time for decision makers to make decisions
Useable	Easy to use for different tasks; human and machine readable
Understandable	Presented in a useful and intelligible format; easily comprehended and interpreted
Verifiable	Same information produced by two independent, knowledgeable people

machine-readable - Data in a format that can be processed by a computer.

Data is most useful when it is in a **machine-readable** format that can be read and processed by a computer. This processing may involve data collection, recording, storage, updating, and data dissemination. For example, public companies are now required to code their financial statements using XBRL (eXtensible Business Reporting Language)—a programming language designed specifically to facilitate the communication of financial and other business information. Without XBRL, electronic documents are digital versions of paper reports. Humans can read the data, but computers cannot automatically process the data until a person manually enters it in the appropriate format. XBRL changes that by encoding information about what a particular data item means so that other computer programs can understand what to do with it. XBRL is discussed more fully in Chapter 16.

Using machine readable formats like XBRL improves many of the other 14 characteristics that make information useful. For example, XBRL improves:

- Reliability by reducing human error and using standard taxonomies.
- Relevance by assigning relevant meaning to data so it can be compared to similar data from other organizations.
- Accessibility by enabling the automatic importing of data into decision models and other computer systems.
- Understandability and usability by making the data readable to both humans and computers.
- Timeliness by reducing the time needed to import, produce, and distribute information.

Machine readable data also facilitates newer technologies such as artificial intelligence and data analytics, which are discussed later in the chapter.

However, there are limits to the amount of information the human mind can absorb and process. **Information overload** occurs when those limits are passed, resulting in a decline in decision-making quality and an increase in the cost of providing that information. Information system designers use **information technology (IT)** to help decision makers more effectively filter and condense information. For example, Walmart has invested heavily in IT so that every day it can collect and process almost 50 petabytes of transaction data and mine more than 200 internal and external databases to produce valuable information.

The **value of information** is the benefit produced by the information minus the cost of producing it. Benefits of information include reduced uncertainty, improved decisions, and improved ability to plan and schedule activities. The costs include the time and resources spent to produce and distribute the information. Information costs and benefits can

information overload - Exceeding the amount of information a human mind can absorb and process, resulting in a decline in decision-making quality and an increase in the cost of providing information.

information technology (IT) - The computers and other electronic devices used to store, retrieve, transmit, and manipulate data.

value of information - The benefit provided by information minus the cost of producing it.
