About the Authors xxix

Part I Decision Making and Analytics: An Overview 1

Chapter 1 An Overview of Business Intelligence, Analytics, and Decision Support 2

- 1.1** Opening Vignette: Magpie Sensing Employs Analytics to Manage a Vaccine Supply Chain Effectively and Safely 3
- 1.2** Changing Business Environments and Computerized Decision Support 5
 - The Business Pressures–Responses–Support Model 5
- 1.3** Managerial Decision Making 7
 - The Nature of Managers' Work 7
 - The Decision-Making Process 8
- 1.4** Information Systems Support for Decision Making 9
- 1.5** An Early Framework for Computerized Decision Support 11
 - The Gorry and Scott-Morton Classical Framework 11
 - Computer Support for Structured Decisions 12
 - Computer Support for Unstructured Decisions 13
 - Computer Support for Semistructured Problems 13
- 1.6** The Concept of Decision Support Systems (DSS) 13
 - DSS as an Umbrella Term 13
 - Evolution of DSS into Business Intelligence 14
- 1.7** A Framework for Business Intelligence (BI) 14
 - Definitions of BI 14
 - A Brief History of BI 14
 - The Architecture of BI 15
 - Styles of BI 15
 - The Origins and Drivers of BI 16
 - A Multimedia Exercise in Business Intelligence 16
 - ▶ **APPLICATION CASE 1.1** Sabre Helps Its Clients Through Dashboards and Analytics 17
 - The DSS–BI Connection 18
- 1.8** Business Analytics Overview 19
 - Descriptive Analytics 20
 - ▶ **APPLICATION CASE 1.2** Eliminating Inefficiencies at Seattle Children's Hospital 21
 - ▶ **APPLICATION CASE 1.3** Analysis at the Speed of Thought 22
 - Predictive Analytics 22

- ▶ **APPLICATION CASE 1.4** *Moneyball: Analytics in Sports and Movies* 23
- ▶ **APPLICATION CASE 1.5** *Analyzing Athletic Injuries* 24
- Prescriptive Analytics 24
- ▶ **APPLICATION CASE 1.6** *Industrial and Commercial Bank of China (ICBC) Employs Models to Reconfigure Its Branch Network* 25
- Analytics Applied to Different Domains 26
- Analytics or Data Science? 26
- 1.9** Brief Introduction to Big Data Analytics 27
- What Is Big Data? 27
- ▶ **APPLICATION CASE 1.7** *Gilt Groupe's Flash Sales Streamlined by Big Data Analytics* 29
- 1.10** Plan of the Book 29
- Part I: Business Analytics: An Overview 29
- Part II: Descriptive Analytics 30
- Part III: Predictive Analytics 30
- Part IV: Prescriptive Analytics 31
- Part V: Big Data and Future Directions for Business Analytics 31
- 1.11** Resources, Links, and the Teradata University Network Connection 31
- Resources and Links 31
- Vendors, Products, and Demos 31
- Periodicals 31
- The Teradata University Network Connection 32
- The Book's Web Site 32
- Chapter Highlights* 32 • *Key Terms* 33
- Questions for Discussion* 33 • *Exercises* 33
- ▶ **END-OF-CHAPTER APPLICATION CASE** *Nationwide Insurance Used BI to Enhance Customer Service* 34
- References* 35

Chapter 2 Foundations and Technologies for Decision Making 37

- 2.1** Opening Vignette: Decision Modeling at HP Using Spreadsheets 38
- 2.2** Decision Making: Introduction and Definitions 40
- Characteristics of Decision Making 40
- A Working Definition of Decision Making 41
- Decision-Making Disciplines 41
- Decision Style and Decision Makers 41
- 2.3** Phases of the Decision-Making Process 42
- 2.4** Decision Making: The Intelligence Phase 44
- Problem (or Opportunity) Identification 45
- ▶ **APPLICATION CASE 2.1** *Making Elevators Go Faster!* 45
- Problem Classification 46
- Problem Decomposition 46
- Problem Ownership 46

- 2.5 Decision Making: The Design Phase 47
 - Models 47
 - Mathematical (Quantitative) Models 47
 - The Benefits of Models 47
 - Selection of a Principle of Choice 48
 - Normative Models 49
 - Suboptimization 49
 - Descriptive Models 50
 - Good Enough, or Satisficing 51
 - Developing (Generating) Alternatives 52
 - Measuring Outcomes 53
 - Risk 53
 - Scenarios 54
 - Possible Scenarios 54
 - Errors in Decision Making 54
- 2.6 Decision Making: The Choice Phase 55
- 2.7 Decision Making: The Implementation Phase 55
- 2.8 How Decisions Are Supported 56
 - Support for the Intelligence Phase 56
 - Support for the Design Phase 57
 - Support for the Choice Phase 58
 - Support for the Implementation Phase 58
- 2.9 Decision Support Systems: Capabilities 59
 - A DSS Application 59
- 2.10 DSS Classifications 61
 - The AIS SIGDSS Classification for DSS 61
 - Other DSS Categories 63
 - Custom-Made Systems Versus Ready-Made Systems 63
- 2.11 Components of Decision Support Systems 64
 - The Data Management Subsystem 65
 - The Model Management Subsystem 65
 - ▶ **APPLICATION CASE 2.2** Station Casinos Wins by Building Customer Relationships Using Its Data 66
 - ▶ **APPLICATION CASE 2.3** SNAP DSS Helps OneNet Make Telecommunications Rate Decisions 68
 - The User Interface Subsystem 68
 - The Knowledge-Based Management Subsystem 69
 - ▶ **APPLICATION CASE 2.4** From a Game Winner to a Doctor! 70
 - Chapter Highlights* 72 • *Key Terms* 73
 - Questions for Discussion* 73 • *Exercises* 74
 - ▶ **END-OF-CHAPTER APPLICATION CASE** Logistics Optimization in a Major Shipping Company (CSAV) 74
 - References* 75

Part II Descriptive Analytics 77

Chapter 3 Data Warehousing 78

- 3.1 Opening Vignette: Isle of Capri Casinos Is Winning with Enterprise Data Warehouse 79
- 3.2 Data Warehousing Definitions and Concepts 81
 - What Is a Data Warehouse? 81
 - A Historical Perspective to Data Warehousing 81
 - Characteristics of Data Warehousing 83
 - Data Marts 84
 - Operational Data Stores 84
 - Enterprise Data Warehouses (EDW) 85
 - Metadata 85
 - ▶ **APPLICATION CASE 3.1 A Better Data Plan: Well-Established TELCOs Leverage Data Warehousing and Analytics to Stay on Top in a Competitive Industry** 85
- 3.3 Data Warehousing Process Overview 87
 - ▶ **APPLICATION CASE 3.2 Data Warehousing Helps MultiCare Save More Lives** 88
- 3.4 Data Warehousing Architectures 90
 - Alternative Data Warehousing Architectures 93
 - Which Architecture Is the Best? 96
- 3.5 Data Integration and the Extraction, Transformation, and Load (ETL) Processes 97
 - Data Integration 98
 - ▶ **APPLICATION CASE 3.3 BP Lubricants Achieves BIGS Success** 98
 - Extraction, Transformation, and Load 100
- 3.6 Data Warehouse Development 102
 - ▶ **APPLICATION CASE 3.4 Things Go Better with Coke's Data Warehouse** 103
 - Data Warehouse Development Approaches 103
 - ▶ **APPLICATION CASE 3.5 Starwood Hotels & Resorts Manages Hotel Profitability with Data Warehousing** 106
 - Additional Data Warehouse Development Considerations 107
 - Representation of Data in Data Warehouse 108
 - Analysis of Data in the Data Warehouse 109
 - OLAP Versus OLTP 110
 - OLAP Operations 110
- 3.7 Data Warehousing Implementation Issues 113
 - ▶ **APPLICATION CASE 3.6 EDW Helps Connect State Agencies in Michigan** 115
 - Massive Data Warehouses and Scalability 116
- 3.8 Real-Time Data Warehousing 117
 - ▶ **APPLICATION CASE 3.7 Egg Plc Fries the Competition in Near Real Time** 118

- 3.9 Data Warehouse Administration, Security Issues, and Future Trends 121
 - The Future of Data Warehousing 123
- 3.10 Resources, Links, and the Teradata University Network Connection 126
 - Resources and Links 126
 - Cases 126
 - Vendors, Products, and Demos 127
 - Periodicals 127
 - Additional References 127
 - The Teradata University Network (TUN) Connection 127
 - Chapter Highlights* 128 • *Key Terms* 128
 - Questions for Discussion* 128 • *Exercises* 129
 - ▶ **END-OF-CHAPTER APPLICATION CASE** Continental Airlines Flies High with Its Real-Time Data Warehouse 131
 - References* 132

Chapter 4 Business Reporting, Visual Analytics, and Business Performance Management 135

- 4.1 Opening Vignette:Self-Service Reporting Environment Saves Millions for Corporate Customers 136
- 4.2 Business Reporting Definitions and Concepts 139
 - What Is a Business Report? 140
 - ▶ **APPLICATION CASE 4.1** Delta Lloyd Group Ensures Accuracy and Efficiency in Financial Reporting 141
 - Components of the Business Reporting System 143
 - ▶ **APPLICATION CASE 4.2** Flood of Paper Ends at FEMA 144
- 4.3 Data and Information Visualization 145
 - ▶ **APPLICATION CASE 4.3** Tableau Saves Blastrac Thousands of Dollars with Simplified Information Sharing 146
 - A Brief History of Data Visualization 147
 - ▶ **APPLICATION CASE 4.4** TIBCO Spotfire Provides Dana-Farber Cancer Institute with Unprecedented Insight into Cancer Vaccine Clinical Trials 149
- 4.4 Different Types of Charts and Graphs 150
 - Basic Charts and Graphs 150
 - Specialized Charts and Graphs 151
- 4.5 The Emergence of Data Visualization and Visual Analytics 154
 - Visual Analytics 156
 - High-Powered Visual Analytics Environments 158
- 4.6 Performance Dashboards 160
 - ▶ **APPLICATION CASE 4.5** Dallas Cowboys Score Big with Tableau and Teknion 161

Dashboard Design	162
▶ APPLICATION CASE 4.6 Saudi Telecom Company Excels with Information Visualization	163
What to Look For in a Dashboard	164
Best Practices in Dashboard Design	165
Benchmark Key Performance Indicators with Industry Standards	165
Wrap the Dashboard Metrics with Contextual Metadata	165
Validate the Dashboard Design by a Usability Specialist	165
Prioritize and Rank Alerts/Exceptions Streamed to the Dashboard	165
Enrich Dashboard with Business Users' Comments	165
Present Information in Three Different Levels	166
Pick the Right Visual Construct Using Dashboard Design Principles	166
Provide for Guided Analytics	166
4.7 Business Performance Management	166
Closed-Loop BPM Cycle	167
▶ APPLICATION CASE 4.7 IBM Cognos Express Helps Mace for Faster and Better Business Reporting	169
4.8 Performance Measurement	170
Key Performance Indicator (KPI)	171
Performance Measurement System	172
4.9 Balanced Scorecards	172
The Four Perspectives	173
The Meaning of Balance in BSC	174
Dashboards Versus Scorecards	174
4.10 Six Sigma as a Performance Measurement System	175
The DMAIC Performance Model	176
Balanced Scorecard Versus Six Sigma	176
Effective Performance Measurement	177
▶ APPLICATION CASE 4.8 <i>Expedia.com's</i> Customer Satisfaction Scorecard	178
<i>Chapter Highlights</i>	179
• <i>Key Terms</i>	180
<i>Questions for Discussion</i>	181
• <i>Exercises</i>	181
▶ END-OF-CHAPTER APPLICATION CASE Smart Business Reporting Helps Healthcare Providers Deliver Better Care	182
<i>References</i>	184

Part III Predictive Analytics 185

Chapter 5 Data Mining 186

5.1 Opening Vignette: Cabela's Reels in More Customers with Advanced Analytics and Data Mining	187
5.2 Data Mining Concepts and Applications	189
▶ APPLICATION CASE 5.1 Smarter Insurance: Infinity P&C Improves Customer Service and Combats Fraud with Predictive Analytics	191

- Definitions, Characteristics, and Benefits 192
 - ▶ **APPLICATION CASE 5.2** Harnessing Analytics to Combat Crime: Predictive Analytics Helps Memphis Police Department Pinpoint Crime and Focus Police Resources 196
- How Data Mining Works 197
- Data Mining Versus Statistics 200
- 5.3** Data Mining Applications 201
 - ▶ **APPLICATION CASE 5.3** A Mine on Terrorist Funding 203
- 5.4** Data Mining Process 204
 - Step 1: Business Understanding 205
 - Step 2: Data Understanding 205
 - Step 3: Data Preparation 206
 - Step 4: Model Building 208
 - ▶ **APPLICATION CASE 5.4** Data Mining in Cancer Research 210
 - Step 5: Testing and Evaluation 211
 - Step 6: Deployment 211
 - Other Data Mining Standardized Processes and Methodologies 212
- 5.5** Data Mining Methods 214
 - Classification 214
 - Estimating the True Accuracy of Classification Models 215
 - Cluster Analysis for Data Mining 220
 - ▶ **APPLICATION CASE 5.5** 2degrees Gets a 1275 Percent Boost in Churn Identification 221
 - Association Rule Mining 224
- 5.6** Data Mining Software Tools 228
 - ▶ **APPLICATION CASE 5.6** Data Mining Goes to Hollywood: Predicting Financial Success of Movies 231
- 5.7** Data Mining Privacy Issues, Myths, and Blunders 234
 - Data Mining and Privacy Issues 234
 - ▶ **APPLICATION CASE 5.7** Predicting Customer Buying Patterns—The Target Story 235
 - Data Mining Myths and Blunders 236
 - Chapter Highlights* 237 • *Key Terms* 238
 - Questions for Discussion* 238 • *Exercises* 239
 - ▶ **END-OF-CHAPTER APPLICATION CASE** Macys.com Enhances Its Customers' Shopping Experience with Analytics 241
 - References* 241

Chapter 6 Techniques for Predictive Modeling 243

- 6.1** Opening Vignette: Predictive Modeling Helps Better Understand and Manage Complex Medical Procedures 244
- 6.2** Basic Concepts of Neural Networks 247
 - Biological and Artificial Neural Networks 248
 - ▶ **APPLICATION CASE 6.1** Neural Networks Are Helping to Save Lives in the Mining Industry 250
 - Elements of ANN 251

- Network Information Processing 252
- Neural Network Architectures 254
 - ▶ **APPLICATION CASE 6.2** Predictive Modeling Is Powering the Power Generators 256
- 6.3 Developing Neural Network–Based Systems 258
 - The General ANN Learning Process 259
 - Backpropagation 260
- 6.4 Illuminating the Black Box of ANN with Sensitivity Analysis 262
 - ▶ **APPLICATION CASE 6.3** Sensitivity Analysis Reveals Injury Severity Factors in Traffic Accidents 264
- 6.5 Support Vector Machines 265
 - ▶ **APPLICATION CASE 6.4** Managing Student Retention with Predictive Modeling 266
 - Mathematical Formulation of SVMs 270
 - Primal Form 271
 - Dual Form 271
 - Soft Margin 271
 - Nonlinear Classification 272
 - Kernel Trick 272
- 6.6 A Process-Based Approach to the Use of SVM 273
 - Support Vector Machines Versus Artificial Neural Networks 274
- 6.7 Nearest Neighbor Method for Prediction 275
 - Similarity Measure: The Distance Metric 276
 - Parameter Selection 277
 - ▶ **APPLICATION CASE 6.5** Efficient Image Recognition and Categorization with *k*NN 278
 - Chapter Highlights* 280 • *Key Terms* 280
 - Questions for Discussion* 281 • *Exercises* 281
 - ▶ **END-OF-CHAPTER APPLICATION CASE** Coors Improves Beer Flavors with Neural Networks 284
 - References* 285

Chapter 7 Text Analytics, Text Mining, and Sentiment Analysis 288

- 7.1 Opening Vignette: Machine Versus Men on *Jeopardy!*: The Story of Watson 289
- 7.2 Text Analytics and Text Mining Concepts and Definitions 291
 - ▶ **APPLICATION CASE 7.1** Text Mining for Patent Analysis 295
- 7.3 Natural Language Processing 296
 - ▶ **APPLICATION CASE 7.2** Text Mining Improves Hong Kong Government’s Ability to Anticipate and Address Public Complaints 298
- 7.4 Text Mining Applications 300
 - Marketing Applications 301
 - Security Applications 301
 - ▶ **APPLICATION CASE 7.3** Mining for Lies 302
 - Biomedical Applications 304

- Academic Applications 305
 - ▶ **APPLICATION CASE 7.4** Text Mining and Sentiment Analysis Help Improve Customer Service Performance 306
- 7.5 Text Mining Process 307
 - Task 1: Establish the Corpus 308
 - Task 2: Create the Term–Document Matrix 309
 - Task 3: Extract the Knowledge 312
 - ▶ **APPLICATION CASE 7.5** Research Literature Survey with Text Mining 314
- 7.6 Text Mining Tools 317
 - Commercial Software Tools 317
 - Free Software Tools 317
 - ▶ **APPLICATION CASE 7.6** A Potpourri of Text Mining Case Synopses 318
- 7.7 Sentiment Analysis Overview 319
 - ▶ **APPLICATION CASE 7.7** Whirlpool Achieves Customer Loyalty and Product Success with Text Analytics 321
- 7.8 Sentiment Analysis Applications 323
- 7.9 Sentiment Analysis Process 325
 - Methods for Polarity Identification 326
 - Using a Lexicon 327
 - Using a Collection of Training Documents 328
 - Identifying Semantic Orientation of Sentences and Phrases 328
 - Identifying Semantic Orientation of Document 328
- 7.10 Sentiment Analysis and Speech Analytics 329
 - How Is It Done? 329
 - ▶ **APPLICATION CASE 7.8** Cutting Through the Confusion: Blue Cross Blue Shield of North Carolina Uses Nexidia’s Speech Analytics to Ease Member Experience in Healthcare 331
 - Chapter Highlights* 333 • *Key Terms* 333
 - Questions for Discussion* 334 • *Exercises* 334
 - ▶ **END-OF-CHAPTER APPLICATION CASE** BBVA Seamlessly Monitors and Improves Its Online Reputation 335
 - References* 336

Chapter 8 Web Analytics, Web Mining, and Social Analytics 338

- 8.1 Opening Vignette: Security First Insurance Deepens Connection with Policyholders 339
- 8.2 Web Mining Overview 341
- 8.3 Web Content and Web Structure Mining 344
 - ▶ **APPLICATION CASE 8.1** Identifying Extremist Groups with Web Link and Content Analysis 346
- 8.4 Search Engines 347
 - Anatomy of a Search Engine 347
 - 1. Development Cycle 348
 - Web Crawler 348
 - Document Indexer 348

- 2. Response Cycle 349
 - Query Analyzer 349
 - Document Matcher/Ranker 349
 - How Does Google Do It? 351
 - ▶ **APPLICATION CASE 8.2** IGN Increases Search Traffic by 1500 Percent 353
- 8.5 Search Engine Optimization 354
 - Methods for Search Engine Optimization 355
 - ▶ **APPLICATION CASE 8.3** Understanding Why Customers Abandon Shopping Carts Results in \$10 Million Sales Increase 357
- 8.6 Web Usage Mining (Web Analytics) 358
 - Web Analytics Technologies 359
 - ▶ **APPLICATION CASE 8.4** Allegro Boosts Online Click-Through Rates by 500 Percent with Web Analysis 360
 - Web Analytics Metrics 362
 - Web Site Usability 362
 - Traffic Sources 363
 - Visitor Profiles 364
 - Conversion Statistics 364
- 8.7 Web Analytics Maturity Model and Web Analytics Tools 366
 - Web Analytics Tools 368
 - Putting It All Together—A Web Site Optimization Ecosystem 370
 - A Framework for Voice of the Customer Strategy 372
- 8.8 Social Analytics and Social Network Analysis 373
 - Social Network Analysis 374
 - Social Network Analysis Metrics 375
 - ▶ **APPLICATION CASE 8.5** Social Network Analysis Helps Telecommunication Firms 375
 - Connections 376
 - Distributions 376
 - Segmentation 377
- 8.9 Social Media Definitions and Concepts 377
 - How Do People Use Social Media? 378
 - ▶ **APPLICATION CASE 8.6** Measuring the Impact of Social Media at Lollapalooza 379
- 8.10 Social Media Analytics 380
 - Measuring the Social Media Impact 381
 - Best Practices in Social Media Analytics 381
 - ▶ **APPLICATION CASE 8.7** eHarmony Uses Social Media to Help Take the Mystery Out of Online Dating 383
 - Social Media Analytics Tools and Vendors 384
 - Chapter Highlights* 386 • *Key Terms* 387
 - Questions for Discussion* 387 • *Exercises* 388
 - ▶ **END-OF-CHAPTER APPLICATION CASE** Keeping Students on Track with Web and Predictive Analytics 388
 - References* 390

Part IV Prescriptive Analytics 391

Chapter 9 Model-Based Decision Making: Optimization and Multi-Criteria Systems 392

- 9.1 Opening Vignette: Midwest ISO Saves Billions by Better Planning of Power Plant Operations and Capacity Planning 393
- 9.2 Decision Support Systems Modeling 394
 - ▶ **APPLICATION CASE 9.1** Optimal Transport for ExxonMobil Downstream Through a DSS 395
 - Current Modeling Issues 396
 - ▶ **APPLICATION CASE 9.2** Forecasting/Predictive Analytics Proves to Be a Good Gamble for Harrah's Cherokee Casino and Hotel 397
- 9.3 Structure of Mathematical Models for Decision Support 399
 - The Components of Decision Support Mathematical Models 399
 - The Structure of Mathematical Models 401
- 9.4 Certainty, Uncertainty, and Risk 401
 - Decision Making Under Certainty 402
 - Decision Making Under Uncertainty 402
 - Decision Making Under Risk (Risk Analysis) 402
 - ▶ **APPLICATION CASE 9.3** American Airlines Uses Should-Cost Modeling to Assess the Uncertainty of Bids for Shipment Routes 403
- 9.5 Decision Modeling with Spreadsheets 404
 - ▶ **APPLICATION CASE 9.4** Showcase Scheduling at Fred Astaire East Side Dance Studio 404
- 9.6 Mathematical Programming Optimization 407
 - ▶ **APPLICATION CASE 9.5** Spreadsheet Model Helps Assign Medical Residents 407
 - Mathematical Programming 408
 - Linear Programming 408
 - Modeling in LP: An Example 409
 - Implementation 414
- 9.7 Multiple Goals, Sensitivity Analysis, What-If Analysis, and Goal Seeking 416
 - Multiple Goals 416
 - Sensitivity Analysis 417
 - What-If Analysis 418
 - Goal Seeking 418
- 9.8 Decision Analysis with Decision Tables and Decision Trees 420
 - Decision Tables 420
 - Decision Trees 422
- 9.9 Multi-Criteria Decision Making With Pairwise Comparisons 423
 - The Analytic Hierarchy Process 423

- ▶ **APPLICATION CASE 9.6** U.S. HUD Saves the House by Using AHP for Selecting IT Projects 423
- Tutorial on Applying Analytic Hierarchy Process Using Web-HIPRE 425
 - Chapter Highlights* 429 • *Key Terms* 430
 - Questions for Discussion* 430 • *Exercises* 430
- ▶ **END-OF-CHAPTER APPLICATION CASE** Pre-Positioning of Emergency Items for CARE International 433
- References* 434

Chapter 10 Modeling and Analysis: Heuristic Search Methods and Simulation 435

- 10.1 Opening Vignette: System Dynamics Allows Fluor Corporation to Better Plan for Project and Change Management 436
- 10.2 Problem-Solving Search Methods 437
 - Analytical Techniques 438
 - Algorithms 438
 - Blind Searching 439
 - Heuristic Searching 439
 - ▶ **APPLICATION CASE 10.1** Chilean Government Uses Heuristics to Make Decisions on School Lunch Providers 439
- 10.3 Genetic Algorithms and Developing GA Applications 441
 - Example: The Vector Game 441
 - Terminology of Genetic Algorithms 443
 - How Do Genetic Algorithms Work? 443
 - Limitations of Genetic Algorithms 445
 - Genetic Algorithm Applications 445
- 10.4 Simulation 446
 - ▶ **APPLICATION CASE 10.2** Improving Maintenance Decision Making in the Finnish Air Force Through Simulation 446
 - ▶ **APPLICATION CASE 10.3** Simulating Effects of Hepatitis B Interventions 447
 - Major Characteristics of Simulation 448
 - Advantages of Simulation 449
 - Disadvantages of Simulation 450
 - The Methodology of Simulation 450
 - Simulation Types 451
 - Monte Carlo Simulation 452
 - Discrete Event Simulation 453
- 10.5 Visual Interactive Simulation 453
 - Conventional Simulation Inadequacies 453
 - Visual Interactive Simulation 453
 - Visual Interactive Models and DSS 454

Glossary 634

Index 648

PREFACE

Analytics has become the technology driver of this decade. Companies such as IBM, Oracle, Microsoft, and others are creating new organizational units focused on analytics that help businesses become more effective and efficient in their operations. Decision makers are using more computerized tools to support their work. Even consumers are using analytics tools directly or indirectly to make decisions on routine activities such as shopping, healthcare, and entertainment. The field of decision support systems (DSS)/business intelligence (BI) is evolving rapidly to become more focused on innovative applications of data streams that were not even captured some time back, much less analyzed in any significant way. New applications turn up daily in healthcare, sports, entertainment, supply chain management, utilities, and virtually every industry imaginable.

The theme of this revised edition is BI and analytics for enterprise decision support. In addition to traditional decision support applications, this edition expands the reader's understanding of the various types of analytics by providing examples, products, services, and exercises by discussing Web-related issues throughout the text. We highlight Web intelligence/Web analytics, which parallel BI/business analytics (BA) for e-commerce and other Web applications. The book is supported by a Web site (pearsonhighered.com/sharda) and also by an independent site at dssbibook.com. We will also provide links to software tutorials through a special section of the Web site.

The purpose of this book is to introduce the reader to these technologies that are generally called *analytics* but have been known by other names. The core technology consists of DSS, BI, and various decision-making techniques. We use these terms interchangeably. This book presents the fundamentals of the techniques and the manner in which these systems are constructed and used. We follow an EEE approach to introducing these topics: **Exposure**, **Experience**, and **Explore**. The book primarily provides **exposure** to various analytics techniques and their applications. The idea is that a student will be inspired to learn from how other organizations have employed analytics to make decisions or to gain a competitive edge. We believe that such **exposure** to what is being done with analytics and how it can be achieved is the key component of learning about analytics. In describing the techniques, we also introduce specific software tools that can be used for developing such applications. The book is not limited to any one software tool, so the students can **experience** these techniques using any number of available software tools. Specific suggestions are given in each chapter, but the student and the professor are able to use this book with many different software tools. Our book's companion Web site will include specific software guides, but students can gain **experience** with these techniques in many different ways. Finally, we hope that this **exposure** and **experience** enable and motivate readers to **explore** the potential of these techniques in their own domain. To facilitate such **exploration**, we include exercises that direct them to Teradata University Network and other sites as well that include team-oriented exercises where appropriate. We will also highlight new and innovative applications that we learn about on the book's companion Web sites.

Most of the specific improvements made in this tenth edition concentrate on three areas: reorganization, content update, and a sharper focus. Despite the many changes, we have preserved the comprehensiveness and user friendliness that have made the text a market leader. We have also reduced the book's size by eliminating older and redundant material and by combining material that was not used by a majority of professors. At the same time, we have kept several of the classical references intact. Finally, we present accurate and updated material that is not available in any other text. We next describe the changes in the tenth edition.

WHAT'S NEW IN THE TENTH EDITION?

With the goal of improving the text, this edition marks a major reorganization of the text to reflect the focus on analytics. The last two editions transformed the book from the traditional DSS to BI and fostered a tight linkage with the Teradata University Network (TUN). This edition is now organized around three major types of analytics. The new edition has many timely additions, and the dated content has been deleted. The following major specific changes have been made:

- ***New organization.*** The book is now organized around three types of analytics: descriptive, predictive, and prescriptive, a classification promoted by INFORMS. After introducing the topics of DSS/BI and analytics in Chapter 1 and covering the foundations of decision making and decision support in Chapter 2, the book begins with an overview of data warehousing and data foundations in Chapter 3. This part then covers descriptive or reporting analytics, specifically, visualization and business performance measurement. Chapters 5–8 cover predictive analytics. Chapters 9–12 cover prescriptive and decision analytics as well as other decision support systems topics. Some of the coverage from Chapter 3–4 in previous editions will now be found in the new Chapters 9 and 10. Chapter 11 covers expert systems as well as the new rule-based systems that are commonly built for implementing analytics. Chapter 12 combines two topics that were key chapters in earlier editions—knowledge management and collaborative systems. Chapter 13 is a new chapter that introduces big data and analytics. Chapter 14 concludes the book with discussion of emerging trends and topics in business analytics, including location intelligence, mobile computing, cloud-based analytics, and privacy/ethical considerations in analytics. This chapter also includes an overview of the analytics ecosystem to help the user explore all of the different ways one can participate and grow in the analytics environment. Thus, the book marks a significant departure from the earlier editions in organization. Of course, it is still possible to teach a course with a traditional DSS focus with this book by covering Chapters 1–4, Chapters 9–12, and possibly Chapter 14.
- ***New chapters.*** The following chapters have been added:

Chapter 8, “Web Analytics, Web Mining, and Social Analytics.” This chapter covers the popular topics of Web analytics and social media analytics. It is an almost entirely new chapter (95% new material).

Chapter 13, “Big Data and Analytics.” This chapter introduces the hot topics of Big Data and analytics. It covers the basics of major components of Big Data techniques and characteristics. It is also a new chapter (99% new material).

Chapter 14, “Business Analytics: Emerging Trends and Future Impacts.” This chapter examines several new phenomena that are already changing or are likely to change analytics. It includes coverage of geospatial in analytics, location-based analytics applications, consumer-oriented analytical applications, mobile platforms, and cloud-based analytics. It also updates some coverage from the previous edition on ethical and privacy considerations. It concludes with a major discussion of the analytics ecosystem (90% new material).
- ***Streamlined coverage.*** We have made the book shorter by keeping the most commonly used content. We also mostly eliminated the preformatted online content. Instead, we will use a Web site to provide updated content and links on a regular basis. We also reduced the number of references in each chapter.
- ***Revamped author team.*** Building upon the excellent content that has been prepared by the authors of the previous editions (Turban, Aronson, Liang, King, Sharda, and Delen), this edition was revised by Ramesh Sharda and Dursun Delen.

Both Ramesh and Dursun have worked extensively in DSS and analytics and have industry as well as research experience.

- **A live-update Web site.** Adopters of the textbook will have access to a Web site that will include links to news stories, software, tutorials, and even YouTube videos related to topics covered in the book. This site will be accessible at <http://dssbibook.com>.
- **Revised and updated content.** Almost all of the chapters have new opening vignettes and closing cases that are based on recent stories and events. In addition, application cases throughout the book have been updated to include recent examples of applications of a specific technique/model. These application case stories now include suggested questions for discussion to encourage class discussion as well as further exploration of the specific case and related materials. New Web site links have been added throughout the book. We also deleted many older product links and references. Finally, most chapters have new exercises, Internet assignments, and discussion questions throughout.

Specific changes made in chapters that have been retained from the previous editions are summarized next:

Chapter 1, “An Overview of Business Intelligence, Analytics, and Decision Support,” introduces the three types of analytics as proposed by INFORMS: descriptive, predictive, and prescriptive analytics. A noted earlier, this classification is used in guiding the complete reorganization of the book itself. It includes about 50 percent new material. All of the case stories are new.

Chapter 2, “Foundations and Technologies for Decision Making,” combines material from earlier Chapters 1, 2, and 3 to provide a basic foundation for decision making in general and computer-supported decision making in particular. It eliminates some duplication that was present in Chapters 1–3 of the previous editions. It includes 35 percent new material. Most of the cases are new.

Chapter 3, “Data Warehousing”

- 30 percent new material, including the cases
- New opening case
- Mostly new cases throughout
- NEW: A historic perspective to data warehousing—how did we get here?
- Better coverage of multidimensional modeling (star schema and snowflake schema)
- An updated coverage on the future of data warehousing

Chapter 4, “Business Reporting, Visual Analytics, and Business Performance Management”

- 60 percent of the material is new—especially in visual analytics and reporting
- Most of the cases are new

Chapter 5, “Data Mining”

- 25 percent of the material is new
- Most of the cases are new

Chapter 6, “Techniques for Predictive Modeling”

- 55 percent of the material is new
- Most of the cases are new
- New sections on SVM and k NN

Chapter 7, “Text Analytics, Text Mining, and Sentiment Analysis”

- 50 percent of the material is new
- Most of the cases are new
- New section (1/3 of the chapter) on sentiment analysis

Chapter 8, “Web Analytics, Web Mining, and Social Analytics” (New Chapter)

- 95 percent of the material is new

Chapter 9, “Model-Based Decision Making: Optimization and Multi-Criteria Systems”

- All new cases
- Expanded coverage of analytic hierarchy process
- New examples of mixed-integer programming applications and exercises
- About 50 percent new material

In addition, all the Microsoft Excel–related coverage has been updated to work with Microsoft Excel 2010.

Chapter 10, “Modeling and Analysis: Heuristic Search Methods and Simulation”

- This chapter now introduces genetic algorithms and various types of simulation models
- It includes new coverage of other types of simulation modeling such as agent-based modeling and system dynamics modeling
- New cases throughout
- About 60 percent new material

Chapter 11, “Automated Decision Systems and Expert Systems”

- Expanded coverage of automated decision systems including examples from the airline industry
- New examples of expert systems
- New cases
- About 50 percent new material

Chapter 12, “Knowledge Management and Collaborative Systems”

- Significantly condensed coverage of these two topics combined into one chapter
- New examples of KM applications
- About 25 percent new material

Chapters 13 and 14 are mostly new chapters, as described earlier.

We have retained many of the enhancements made in the last editions and updated the content. These are summarized next:

- **Links to Teradata University Network (TUN).** Most chapters include new links to TUN (teradatauniversitynetwork.com). We encourage the instructors to register and join teradatauniversitynetwork.com and explore various content available through the site. The cases, white papers, and software exercises available through TUN will keep your class fresh and timely.
- **Book title.** As is already evident, the book’s title and focus have changed substantially.
- **Software support.** The TUN Web site provides software support at no charge. It also provides links to free data mining and other software. In addition, the site provides exercises in the use of such software.

THE SUPPLEMENT PACKAGE: PEARSONHIGHERED.COM/SHARDA

A comprehensive and flexible technology-support package is available to enhance the teaching and learning experience. The following instructor and student supplements are available on the book’s Web site, pearsonhighered.com/sharda:

- **Instructor’s Manual.** The Instructor’s Manual includes learning objectives for the entire course and for each chapter, answers to the questions and exercises at the end of each chapter, and teaching suggestions (including instructions for projects). The Instructor’s Manual is available on the secure faculty section of pearsonhighered.com/sharda.

- **Test Item File and TestGen Software.** The Test Item File is a comprehensive collection of true/false, multiple-choice, fill-in-the-blank, and essay questions. The questions are rated by difficulty level, and the answers are referenced by book page number. The Test Item File is available in Microsoft Word and in TestGen. Pearson Education's test-generating software is available from **www.pearsonhighered.com/irc**. The software is PC/MAC compatible and preloaded with all of the Test Item File questions. You can manually or randomly view test questions and drag-and-drop to create a test. You can add or modify test-bank questions as needed. Our TestGens are converted for use in BlackBoard, WebCT, Moodle, D2L, and Angel. These conversions can be found on **pearsonhighered.com/sharda**. The TestGen is also available in Respondus and can be found on **www.respondus.com**.
- **PowerPoint slides.** PowerPoint slides are available that illuminate and build on key concepts in the text. Faculty can download the PowerPoint slides from **pearsonhighered.com/sharda**.

ACKNOWLEDGMENTS

Many individuals have provided suggestions and criticisms since the publication of the first edition of this book. Dozens of students participated in class testing of various chapters, software, and problems and assisted in collecting material. It is not possible to name everyone who participated in this project, but our thanks go to all of them. Certain individuals made significant contributions, and they deserve special recognition.

First, we appreciate the efforts of those individuals who provided formal reviews of the first through tenth editions (school affiliations as of the date of review):

Robert Blanning, Vanderbilt University
 Ranjit Bose, University of New Mexico
 Warren Briggs, Suffolk University
 Lee Roy Bronner, Morgan State University
 Charles Butler, Colorado State University
 Sohail S. Chaudry, University of Wisconsin–La Crosse
 Kathy Chudoba, Florida State University
 Wingyan Chung, University of Texas
 Woo Young Chung, University of Memphis
 Paul “Buddy” Clark, South Carolina State University
 Pi-Sheng Deng, California State University–Stanislaus
 Joyce Elam, Florida International University
 Kurt Engemann, Iona College
 Gary Farrar, Jacksonville University
 George Federman, Santa Clara City College
 Jerry Fjermestad, New Jersey Institute of Technology
 Joey George, Florida State University
 Paul Gray, Claremont Graduate School
 Orv Greyholds, Capital College (Laurel, Maryland)
 Martin Grossman, Bridgewater State College
 Ray Jacobs, Ashland University
 Leonard Jessup, Indiana University
 Jeffrey Johnson, Utah State University
 Jahangir Karimi, University of Colorado Denver
 Saul Kasscieh, University of New Mexico
 Anand S. Kunnathur, University of Toledo

Shao-ju Lee, California State University at Northridge
Yair Levy, Nova Southeastern University
Hank Lucas, New York University
Jane Mackay, Texas Christian University
George M. Marakas, University of Maryland
Dick Mason, Southern Methodist University
Nick McGaughey, San Jose State University
Ido Millet, Pennsylvania State University–Erie
Benjamin Mittman, Northwestern University
Larry Moore, Virginia Polytechnic Institute and State University
Simitra Mukherjee, Nova Southeastern University
Marianne Murphy, Northeastern University
Peter Mykytyn, Southern Illinois University
Natalie Nazarenko, SUNY College at Fredonia
Souren Paul, Southern Illinois University
Joshua Pauli, Dakota State University
Roger Alan Pick, University of Missouri–St. Louis
W. “RP” Raghupathi, California State University–Chico
Loren Rees, Virginia Polytechnic Institute and State University
David Russell, Western New England College
Steve Ruth, George Mason University
Vartan Safarian, Winona State University
Glenn Shephard, San Jose State University
Jung P. Shim, Mississippi State University
Meenu Singh, Murray State University
Randy Smith, University of Virginia
James T.C. Teng, University of South Carolina
John VanGigch, California State University at Sacramento
David Van Over, University of Idaho
Paul J.A. van Vliet, University of Nebraska at Omaha
B. S. Vijayaraman, University of Akron
Howard Charles Walton, Gettysburg College
Diane B. Walz, University of Texas at San Antonio
Paul R. Watkins, University of Southern California
Randy S. Weinberg, Saint Cloud State University
Jennifer Williams, University of Southern Indiana
Steve Zanakis, Florida International University
Fan Zhao, Florida Gulf Coast University

Several individuals contributed material to the text or the supporting material. Susan Baxley and Dr. David Schrader of Teradata provided special help in identifying new TUN content for the book and arranging permissions for the same. Peter Horner, editor of *OR/MS Today*, allowed us to summarize new application stories from *OR/MS Today* and *Analytics Magazine*. We also thank INFORMS for their permission to highlight content from *Interfaces*. Prof. Rick Wilson contributed some examples and exercise questions for Chapter 9. Assistance from Natraj Ponna, Daniel Asamoah, Amir Hassan-Zadeh, Kartik Dasika, Clara Gregory, and Amy Wallace (all of Oklahoma State University) is gratefully acknowledged for this edition. We also acknowledge Narges Kasiri (Ithaca College) for the write-up on system dynamics modeling and Jongswas Chongwatpol (NIDA, Thailand) for the material on SIMIO software. For the previous edition, we acknowledge the contributions of Dave King (JDA Software Group, Inc.) and

Jerry Wagner (University of Nebraska–Omaha). Major contributors for earlier editions include Mike Goul (Arizona State University) and Leila A. Halawi (Bethune-Cookman College), who provided material for the chapter on data warehousing; Christy Cheung (Hong Kong Baptist University), who contributed to the chapter on knowledge management; Linda Lai (Macau Polytechnic University of China); Dave King (JDA Software Group, Inc.); Lou Frenzel, an independent consultant whose books *Crash Course in Artificial Intelligence and Expert Systems* and *Understanding of Expert Systems* (both published by Howard W. Sams, New York, 1987) provided material for the early editions; Larry Medsker (American University), who contributed substantial material on neural networks; and Richard V. McCarthy (Quinnipiac University), who performed major revisions in the seventh edition.

Previous editions of the book have also benefited greatly from the efforts of many individuals who contributed advice and interesting material (such as problems), gave feedback on material, or helped with class testing. These individuals are Warren Briggs (Suffolk University), Frank DeBalough (University of Southern California), Mei-Ting Cheung (University of Hong Kong), Alan Dennis (Indiana University), George Easton (San Diego State University), Janet Fisher (California State University, Los Angeles), David Friend (Pilot Software, Inc.), the late Paul Gray (Claremont Graduate School), Mike Henry (OSU), Dustin Huntington (Exsys, Inc.), Subramanian Rama Iyer (Oklahoma State University), Angie Jungermann (Oklahoma State University), Elena Karahanna (The University of Georgia), Mike McAulliffe (The University of Georgia), Chad Peterson (The University of Georgia), Neil Rabjohn (York University), Jim Ragusa (University of Central Florida), Alan Rowe (University of Southern California), Steve Ruth (George Mason University), Linus Schrage (University of Chicago), Antonie Stam (University of Missouri), Ron Swift (NCR Corp.), Merrill Warkentin (then at Northeastern University), Paul Watkins (The University of Southern California), Ben Mortagy (Claremont Graduate School of Management), Dan Walsh (Bellcore), Richard Watson (The University of Georgia), and the many other instructors and students who have provided feedback.

Several vendors cooperated by providing development and/or demonstration software: Expert Choice, Inc. (Pittsburgh, Pennsylvania), Nancy Clark of Exsys, Inc. (Albuquerque, New Mexico), Jim Godsey of GroupSystems, Inc. (Broomfield, Colorado), Raimo Hämläinen of Helsinki University of Technology, Gregory Piatetsky-Shapiro of KDNuggets.com, Logic Programming Associates (UK), Gary Lynn of NeuroDimension Inc. (Gainesville, Florida), Palisade Software (Newfield, New York), Jerry Wagner of Planners Lab (Omaha, Nebraska), Promised Land Technologies (New Haven, Connecticut), Salford Systems (La Jolla, California), Sense Networks (New York, New York), Gary Miner of StatSoft, Inc. (Tulsa, Oklahoma), Ward Systems Group, Inc. (Frederick, Maryland), Idea Fisher Systems, Inc. (Irving, California), and Wordtech Systems (Orinda, California).

Special thanks to the Teradata University Network and especially to Hugh Watson, Michael Goul, and Susan Baxley, Program Director, for their encouragement to tie this book with TUN and for providing useful material for the book.

Many individuals helped us with administrative matters and editing, proofreading, and preparation. The project began with Jack Repcheck (a former Macmillan editor), who initiated this project with the support of Hank Lucas (New York University). Judy Lang collaborated with all of us, provided editing, and guided us during the entire project through the eighth edition.

Finally, the Pearson team is to be commended: Executive Editor Bob Horan, who orchestrated this project; Kitty Jarrett, who copyedited the manuscript; and the production team, Tom Benfatti at Pearson, George and staff at Integra Software Services, who transformed the manuscript into a book.

We would like to thank all these individuals and corporations. Without their help, the creation of this book would not have been possible. Ramesh and Dursun want to specifically acknowledge the contributions of previous coauthors Janine Aronson, David King, and T. P. Liang, whose original contributions constitute significant components of the book.

R.S.

E.T.

Note that Web site URLs are dynamic. As this book went to press, we verified that all the cited Web sites were active and valid. Web sites to which we refer in the text sometimes change or are discontinued because companies change names, are bought or sold, merge, or fail. Sometimes Web sites are down for maintenance, repair, or redesign. Most organizations have dropped the initial “www” designation for their sites, but some still use it. If you have a problem connecting to a Web site that we mention, please be patient and simply run a Web search to try to identify the new site. Most times, the new site can be found quickly. Some sites also require a free registration before allowing you to see the content. We apologize in advance for this inconvenience.

ABOUT THE AUTHORS

Ramesh Sharda (M.B.A., Ph.D., University of Wisconsin–Madison) is director of the Ph.D. in Business for Executives Program and Institute for Research in Information Systems (IRIS), ConocoPhillips Chair of Management of Technology, and a Regents Professor of Management Science and Information Systems in the Spears School of Business at Oklahoma State University (OSU). About 200 papers describing his research have been published in major journals, including *Operations Research*, *Management Science*, *Information Systems Research*, *Decision Support Systems*, and *Journal of MIS*. He cofounded the AIS SIG on Decision Support Systems and Knowledge Management (SIGDSS). Dr. Sharda serves on several editorial boards, including those of *INFORMS Journal on Computing*, *Decision Support Systems*, and *ACM Transactions on Management Information Systems*. He has authored and edited several textbooks and research books and serves as the co-editor of several book series (Integrated Series in Information Systems, Operations Research/Computer Science Interfaces, and Annals of Information Systems) with Springer. He is also currently serving as the executive director of the Teradata University Network. His current research interests are in decision support systems, business analytics, and technologies for managing information overload.

Dursun Delen (Ph.D., Oklahoma State University) is the Spears and Patterson Chairs in Business Analytics, Director of Research for the Center for Health Systems Innovation, and Professor of Management Science and Information Systems in the Spears School of Business at Oklahoma State University (OSU). Prior to his academic career, he worked for a privately owned research and consultancy company, Knowledge Based Systems Inc., in College Station, Texas, as a research scientist for five years, during which he led a number of decision support and other information systems–related research projects funded by federal agencies such as DoD, NASA, NIST, and DOE. Dr. Delen’s research has appeared in major journals including *Decision Support Systems*, *Communications of the ACM*, *Computers and Operations Research*, *Computers in Industry*, *Journal of Production Operations Management*, *Artificial Intelligence in Medicine*, and *Expert Systems with Applications*, among others. He recently published four textbooks: *Advanced Data Mining Techniques* with Springer, 2008; *Decision Support and Business Intelligence Systems* with Prentice Hall, 2010; *Business Intelligence: A Managerial Approach*, with Prentice Hall, 2010; and *Practical Text Mining*, with Elsevier, 2012. He is often invited to national and international conferences for keynote addresses on topics related to data/text mining, business intelligence, decision support systems, and knowledge management. He served as the general co-chair for the 4th International Conference on Network Computing and Advanced Information Management (September 2–4, 2008, in Seoul, South Korea) and regularly chairs tracks and mini-tracks at various information systems conferences. He is the associate editor-in-chief for *International Journal of Experimental Algorithms*, associate editor for *International Journal of RF Technologies* and *Journal of Decision Analytics*, and is on the editorial boards of five other technical journals. His research and teaching interests are in data and text mining, decision support systems, knowledge management, business intelligence, and enterprise modeling.

Efraim Turban (M.B.A., Ph.D., University of California, Berkeley) is a visiting scholar at the Pacific Institute for Information System Management, University of Hawaii. Prior to this, he was on the staff of several universities, including City University of Hong Kong; Lehigh University; Florida International University; California State University, Long

Beach; Eastern Illinois University; and the University of Southern California. Dr. Turban is the author of more than 100 refereed papers published in leading journals, such as *Management Science*, *MIS Quarterly*, and *Decision Support Systems*. He is also the author of 20 books, including *Electronic Commerce: A Managerial Perspective* and *Information Technology for Management*. He is also a consultant to major corporations worldwide. Dr. Turban's current areas of interest are Web-based decision support systems, social commerce, and collaborative decision making.

Decision Making and Analytics

An Overview

LEARNING OBJECTIVES FOR PART I

- Understand the need for business analytics
- Understand the foundations and key issues of managerial decision making
- Understand the major categories and applications of business analytics
- Learn the major frameworks of computerized decision support: analytics, decision support systems (DSS), and business intelligence (BI)

This book deals with a collection of computer technologies that support managerial work—essentially, decision making. These technologies have had a profound impact on corporate strategy, performance, and competitiveness. These techniques broadly encompass analytics, business intelligence, and decision support systems, as shown throughout the book. In Part I, we first provide an overview of the whole book in one chapter. We cover several topics in this chapter. The first topic is managerial decision making and its computerized support; the second is frameworks for decision support. We then introduce business analytics and business intelligence. We also provide examples of applications of these analytical techniques, as well as a preview of the entire book. The second chapter within Part I introduces the foundational methods for decision making and relates these to computerized decision support. It also covers the components and technologies of decision support systems.

An Overview of Business Intelligence, Analytics, and Decision Support

LEARNING OBJECTIVES

- Understand today's turbulent business environment and describe how organizations survive and even excel in such an environment (solving problems and exploiting opportunities)
- Understand the need for computerized support of managerial decision making
- Understand an early framework for managerial decision making
- Learn the conceptual foundations of the decision support systems (DSS¹) methodology
- Describe the business intelligence (BI) methodology and concepts and relate them to DSS
- Understand the various types of analytics
- List the major tools of computerized decision support

The business environment (climate) is constantly changing, and it is becoming more and more complex. Organizations, private and public, are under pressures that force them to respond quickly to changing conditions and to be innovative in the way they operate. Such activities require organizations to be agile and to make frequent and quick strategic, tactical, and operational decisions, some of which are very complex. Making such decisions may require considerable amounts of relevant data, information, and knowledge. Processing these, in the framework of the needed decisions, must be done quickly, frequently in real time, and usually requires some computerized support.

This book is about using business analytics as computerized support for managerial decision making. It concentrates on both the theoretical and conceptual foundations of decision support, as well as on the commercial tools and techniques that are available. This introductory chapter provides more details of these topics as well as an overview of the book. This chapter has the following sections:

- 1.1** Opening Vignette: Magpie Sensing Employs Analytics to Manage a Vaccine Supply Chain Effectively and Safely 3
- 1.2** Changing Business Environments and Computerized Decision Support 5

¹The acronym *DSS* is treated as both singular and plural throughout this book. Similarly, other acronyms, such as *MIS* and *GSS*, designate both plural and singular forms. This is also true of the word *analytics*.

- 1.3 Managerial Decision Making 7
- 1.4 Information Systems Support for Decision Making 9
- 1.5 An Early Framework for Computerized Decision Support 11
- 1.6 The Concept of Decision Support Systems (DSS) 13
- 1.7 A Framework for Business Intelligence (BI) 14
- 1.8 Business Analytics Overview 19
- 1.9 Brief Introduction to Big Data Analytics 27
- 1.10 Plan of the Book 29
- 1.11 Resources, Links, and the Teradata University Network Connection 31

1.1 OPENING VIGNETTE: Magpie Sensing Employs Analytics to Manage a Vaccine Supply Chain Effectively and Safely

Cold chain in healthcare is defined as the temperature-controlled supply chain involving a system of transporting and storing vaccines and pharmaceutical drugs. It consists of three major components—transport and storage equipment, trained personnel, and efficient management procedures. The majority of the vaccines in the cold chain are typically maintained at a temperature of 35–46 degrees Fahrenheit [2–8 degrees Centigrade]. Maintaining cold chain integrity is extremely important for healthcare product manufacturers.

Especially for the vaccines, improper storage and handling practices that compromise vaccine viability prove a costly, time-consuming affair. Vaccines must be stored properly from manufacture until they are available for use. Any extreme temperatures of heat or cold will reduce vaccine potency; such vaccines, if administered, might not yield effective results or could cause adverse effects.

Effectively maintaining the temperatures of storage units throughout the healthcare supply chain in real time—i.e., beginning from the gathering of the resources, manufacturing, distribution, and dispensing of the products—is the most effective solution desired in the cold chain. Also, the location-tagged real-time environmental data about the storage units helps in monitoring the cold chain for spoiled products. The chain of custody can be easily identified to assign product liability.

A study conducted by the Centers for Disease Control and Prevention (CDC) looked at the handling of cold chain vaccines by 45 healthcare providers around United States and reported that three-quarters of the providers experienced serious cold chain violations.

A WAY TOWARD A POSSIBLE SOLUTION

Magpie Sensing, a start-up project under Ebers Smith and Douglas Associated LLC, provides a suite of cold chain monitoring and analysis technologies for the healthcare industry. It is a shippable, wireless temperature and humidity monitor that provides real-time, location-aware tracking of cold chain products during shipment. Magpie Sensing's solutions rely on rich analytics algorithms that leverage the data gathered from the monitoring devices to improve the efficiency of cold chain processes and predict cold storage problems before they occur.

Magpie sensing applies all three types of analytical techniques—descriptive, predictive, and prescriptive analytics—to turn the raw data returned from the monitoring devices into actionable recommendations and warnings.

The properties of the cold storage system, which include the set point of the storage system's thermostat, the typical range of temperature values in the storage system, and

the duty cycle of the system's compressor, are monitored and reported in real time. This information helps trained personnel to ensure that the storage unit is properly configured to store a particular product. All the temperature information is displayed on a Web dashboard that shows a graph of the temperature inside the specific storage unit.

Based on information derived from the monitoring devices, Magpie's predictive analytic algorithms can determine the set point of the storage unit's thermostat and alert the system's users if the system is incorrectly configured, depending upon the various types of products stored. This offers a solution to the users of consumer refrigerators where the thermostat is not temperature graded. Magpie's system also sends alerts about possible temperature violations based on the storage unit's average temperature and subsequent compressor cycle runs, which may drop the temperature below the freezing point. Magpie's predictive analytics further report possible human errors, such as failure to shut the storage unit doors or the presence of an incomplete seal, by analyzing the temperature trend and alerting users via Web interface, text message, or audible alert before the temperature bounds are actually violated. In a similar way, a compressor or a power failure can be detected; the estimated time before the storage unit reaches an unsafe temperature also is reported, which prepares the users to look for backup solutions such as using dry ice to restore power.

In addition to predictive analytics, Magpie Sensing's analytics systems can provide prescriptive recommendations for improving the cold storage processes and business decision making. Prescriptive analytics help users dial in the optimal temperature setting, which helps to achieve the right balance between freezing and spoilage risk; this, in turn, provides a cushion-time to react to the situation before the products spoil. Its prescriptive analytics also gather useful meta-information on cold storage units, including the times of day that are busiest and periods where the system's doors are opened, which can be used to provide additional design plans and institutional policies that ensure that the system is being properly maintained and not overused.

Furthermore, prescriptive analytics can be used to guide equipment purchase decisions by constantly analyzing the performance of current storage units. Based on the storage system's efficiency, decisions on distributing the products across available storage units can be made based on the product's sensitivity.

Using Magpie Sensing's cold chain analytics, additional manufacturing time and expenditure can be eliminated by ensuring that product safety can be secured throughout the supply chain and effective products can be administered to the patients. Compliance with state and federal safety regulations can be better achieved through automatic data gathering and reporting about the products involved in the cold chain.

QUESTIONS FOR THE OPENING VIGNETTE

1. What information is provided by the descriptive analytics employed at Magpie Sensing?
2. What type of support is provided by the predictive analytics employed at Magpie Sensing?
3. How does prescriptive analytics help in business decision making?
4. In what ways can actionable information be reported in real time to concerned users of the system?
5. In what other situations might real-time monitoring applications be needed?

WHAT WE CAN LEARN FROM THIS VIGNETTE

This vignette illustrates how data from a business process can be used to generate insights at various levels. First, the graphical analysis of the data (termed *reporting analytics*) allows

users to get a good feel for the situation. Then, additional analysis using **data mining** techniques can be used to estimate what future behavior would be like. This is the domain of predictive analytics. Such analysis can then be taken to create specific recommendations for operators. This is an example of what we call prescriptive analytics. Finally, this opening vignette also suggests that innovative applications of analytics can create new business ventures. Identifying opportunities for applications of analytics and assisting with decision making in specific domains is an emerging entrepreneurial opportunity.

Zaleski, “Magpie Analytics System Tracks Cold-Chain Products to Keep Vaccines, Reagents Fresh” (2012), technicallybaltimore.com/profiles/startups/magpie-analytics-system-tracks-cold-chain-products-to-keep-vaccines-reagents-fresh (accessed February 2013).

1.2 CHANGING BUSINESS ENVIRONMENTS AND COMPUTERIZED DECISION SUPPORT

The opening vignette illustrates how a company can employ technologies to make sense of data and make better decisions. Companies are moving aggressively to computerized support of their operations. To understand why companies are embracing computerized support, including business intelligence, we developed a model called the *Business Pressures–Responses–Support Model*, which is shown in Figure 1.1.

The Business Pressures–Responses–Support Model

The Business Pressures–Responses–Support Model, as its name indicates, has three components: business pressures that result from today’s business climate, responses (actions taken) by companies to counter the pressures (or to take advantage of the opportunities available in the environment), and computerized support that facilitates the monitoring of the environment and enhances the response actions taken by organizations.

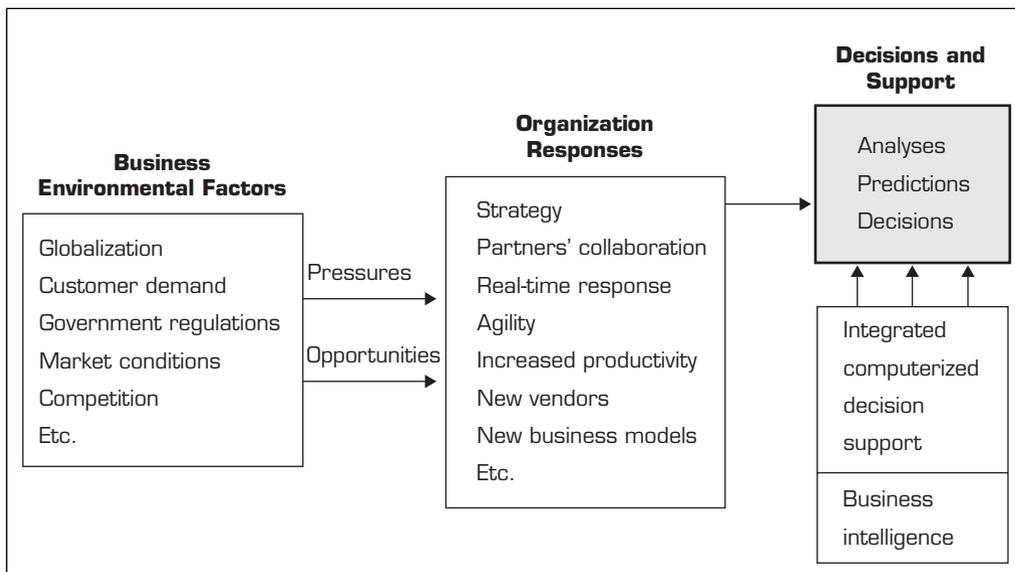

FIGURE 1.1 The Business Pressures–Responses–Support Model.

THE BUSINESS ENVIRONMENT The environment in which organizations operate today is becoming more and more complex. This complexity creates opportunities on the one hand and problems on the other. Take globalization as an example. Today, you can easily find suppliers and customers in many countries, which means you can buy cheaper materials and sell more of your products and services; great opportunities exist. However, globalization also means more and stronger competitors. Business environment factors can be divided into four major categories: *markets*, *consumer demands*, *technology*, and *societal*. These categories are summarized in Table 1.1.

Note that the *intensity* of most of these factors increases with time, leading to more pressures, more competition, and so on. In addition, organizations and departments within organizations face decreased budgets and amplified pressures from top managers to increase performance and profit. In this kind of environment, managers must respond quickly, innovate, and be agile. Let's see how they do it.

ORGANIZATIONAL RESPONSES: BE REACTIVE, ANTICIPATIVE, ADAPTIVE, AND PROACTIVE

Both private and public organizations are aware of today's business environment and pressures. They use different actions to counter the pressures. Vodafone New Zealand Ltd (Krivda, 2008), for example, turned to BI to improve communication and to support executives in its effort to retain existing customers and increase revenue from these customers. Managers may take other actions, including the following:

- Employ strategic planning.
- Use new and innovative business models.
- Restructure business processes.
- Participate in business alliances.
- Improve corporate information systems.
- Improve partnership relationships.

TABLE 1.1 Business Environment Factors That Create Pressures on Organizations

Factor	Description
Markets	Strong competition Expanding global markets Booming electronic markets on the Internet Innovative marketing methods Opportunities for outsourcing with IT support Need for real-time, on-demand transactions
Consumer demands	Desire for customization Desire for quality, diversity of products, and speed of delivery Customers getting powerful and less loyal
Technology	More innovations, new products, and new services Increasing obsolescence rate Increasing information overload Social networking, Web 2.0 and beyond
Societal	Growing government regulations and deregulation Workforce more diversified, older, and composed of more women Prime concerns of homeland security and terrorist attacks Necessity of Sarbanes-Oxley Act and other reporting-related legislation Increasing social responsibility of companies Greater emphasis on sustainability

- Encourage innovation and creativity.
- Improve customer service and relationships.
- Employ social media and mobile platforms for e-commerce and beyond.
- Move to make-to-order production and on-demand manufacturing and services.
- Use new IT to improve communication, data access (discovery of information), and collaboration.
- Respond quickly to competitors' actions (e.g., in pricing, promotions, new products and services).
- Automate many tasks of white-collar employees.
- Automate certain decision processes, especially those dealing with customers.
- Improve decision making by employing analytics.

Many, if not all, of these actions require some computerized support. These and other response actions are frequently facilitated by computerized decision support (DSS).

CLOSING THE STRATEGY GAP One of the major objectives of computerized decision support is to facilitate closing the gap between the current performance of an organization and its desired performance, as expressed in its mission, objectives, and goals, and the strategy to achieve them. In order to understand why computerized support is needed and how it is provided, especially for decision-making support, let's look at managerial decision making.

SECTION 1.2 REVIEW QUESTIONS

1. List the components of and explain the Business Pressures–Responses–Support Model.
2. What are some of the major factors in today's business environment?
3. What are some of the major response activities that organizations take?

1.3 MANAGERIAL DECISION MAKING

Management is a process by which organizational goals are achieved by using resources. The resources are considered inputs, and attainment of goals is viewed as the output of the process. The degree of success of the organization and the manager is often measured by the ratio of outputs to inputs. This ratio is an indication of the organization's *productivity*, which is a reflection of the *organizational and managerial performance*.

The level of productivity or the success of management depends on the performance of managerial functions, such as planning, organizing, directing, and controlling. To perform their functions, managers engage in a continuous process of making decisions. Making a decision means selecting the best alternative from two or more solutions.

The Nature of Managers' Work

Mintzberg's (2008) classic study of top managers and several replicated studies suggest that managers perform 10 major roles that can be classified into three major categories: *interpersonal*, *informational*, and *decisional* (see Table 1.2).

To perform these roles, managers need information that is delivered efficiently and in a timely manner to personal computers (PCs) on their desktops and to mobile devices. This information is delivered by networks, generally via Web technologies.

In addition to obtaining information necessary to better perform their roles, managers use computers directly to support and improve decision making, which is a key task

TABLE 1.2 Mintzberg's 10 Managerial Roles

Role	Description
<i>Interpersonal</i>	
Figurehead	Is symbolic head; obliged to perform a number of routine duties of a legal or social nature
Leader	Is responsible for the motivation and activation of subordinates; responsible for staffing, training, and associated duties
Liaison	Maintains self-developed network of outside contacts and informers who provide favors and information
<i>Informational</i>	
Monitor	Seeks and receives a wide variety of special information (much of it current) to develop a thorough understanding of the organization and environment; emerges as the nerve center of the organization's internal and external information
Disseminator	Transmits information received from outsiders or from subordinates to members of the organization; some of this information is factual, and some involves interpretation and integration
Spokesperson	Transmits information to outsiders about the organization's plans, policies, actions, results, and so forth; serves as an expert on the organization's industry
<i>Decisional</i>	
Entrepreneur	Searches the organization and its environment for opportunities and initiates improvement projects to bring about change; supervises design of certain projects
Disturbance handler	Is responsible for corrective action when the organization faces important, unexpected disturbances
Resource allocator	Is responsible for the allocation of organizational resources of all kinds; in effect, is responsible for the making or approval of all significant organizational decisions
Negotiator	Is responsible for representing the organization at major negotiations

Sources: Compiled from H. A. Mintzberg, *The Nature of Managerial Work*. Prentice Hall, Englewood Cliffs, NJ, 1980; and H. A. Mintzberg, *The Rise and Fall of Strategic Planning*. The Free Press, New York, 1993.

that is part of most of these roles. Many managerial activities in all roles revolve around decision making. *Managers, especially those at high managerial levels, are primarily decision makers.* We review the decision-making process next but will study it in more detail in the next chapter.

The Decision-Making Process

For years, managers considered decision making purely an art—a talent acquired over a long period through experience (i.e., learning by trial-and-error) and by using intuition. Management was considered an art because a variety of individual styles could be used in approaching and successfully solving the same types of managerial problems. These styles were often based on creativity, judgment, intuition, and experience rather than on systematic quantitative methods grounded in a scientific approach. However, recent research suggests that companies with top managers who are more focused on persistent work (almost dullness) tend to outperform those with leaders whose main strengths are interpersonal communication skills (Kaplan et al., 2008; Brooks, 2009). It is more important to emphasize methodical, thoughtful, analytical decision making rather than flashiness and interpersonal communication skills.

Managers usually make decisions by following a four-step process (we learn more about these in Chapter 2):

1. Define the problem (i.e., a decision situation that may deal with some difficulty or with an opportunity).
2. Construct a model that describes the real-world problem.
3. Identify possible solutions to the modeled problem and evaluate the solutions.
4. Compare, choose, and recommend a potential solution to the problem.

To follow this process, one must make sure that sufficient alternative solutions are being considered, that the consequences of using these alternatives can be reasonably predicted, and that comparisons are done properly. However, the environmental factors listed in Table 1.1 make such an evaluation process difficult for the following reasons:

- Technology, information systems, advanced search engines, and globalization result in more and more alternatives from which to choose.
- Government regulations and the need for compliance, political instability and terrorism, competition, and changing consumer demands produce more uncertainty, making it more difficult to predict consequences and the future.
- Other factors are the need to make rapid decisions, the frequent and unpredictable changes that make trial-and-error learning difficult, and the potential costs of making mistakes.
- These environments are growing more complex every day. Therefore, making decisions today is indeed a complex task.

Because of these trends and changes, it is nearly impossible to rely on a trial-and-error approach to management, especially for decisions for which the factors shown in Table 1.1 are strong influences. Managers must be more sophisticated; they must use the new tools and techniques of their fields. Most of those tools and techniques are discussed in this book. Using them to support decision making can be extremely rewarding in making effective decisions. In the following section, we look at why we need computer support and how it is provided.

SECTION 1.3 REVIEW QUESTIONS

1. Describe the three major managerial roles, and list some of the specific activities in each.
2. Why have some argued that management is the same as decision making?
3. Describe the four steps managers take in making a decision.

1.4 INFORMATION SYSTEMS SUPPORT FOR DECISION MAKING

From traditional uses in payroll and bookkeeping functions, computerized systems have penetrated complex managerial areas ranging from the design and management of automated factories to the application of analytical methods for the evaluation of proposed mergers and acquisitions. Nearly all executives know that information technology is vital to their business and extensively use information technologies.

Computer applications have moved from transaction processing and monitoring activities to problem analysis and solution applications, and much of the activity is done with Web-based technologies, in many cases accessed through mobile devices. Analytics and BI tools such as data warehousing, data mining, online analytical processing (OLAP), **dashboards**, and the use of the Web for decision support are the cornerstones of today's modern management. Managers must have high-speed, networked information systems (wireline or wireless) to assist them with their most important task: making decisions. Besides the obvious growth in hardware, software, and network capacities, some
