CONTENTS

Preface 17

About the Authors 23

Chapter 1 An Overview of Business Intelligence, Analytics, and Decision Support 27

- 1.1 Opening Vignette: Magpie Sensing Employs Analytics to Manage a Vaccine Supply Chain Effectively and Safely 28
- 1.2 Changing Business Environments and Computerized Decision Support 30
 - The Business Pressures–Responses–Support Model 30
- 1.3 A Framework for Business Intelligence (BI) 32
 - Definitions of BI 32
 - A Brief History of BI 33
 - The Architecture of BI 34
 - The Origins and Drivers of BI 34
 - ▶ **APPLICATION CASE 1.1 Sabre Helps Its Clients Through Dashboards and Analytics 35**
 - A Multimedia Exercise in Business Intelligence 36
- 1.4 Intelligence Creation, Use, and BI Governance 37
 - A Cyclical Process of Intelligence Creation and Use 37
 - Intelligence and Espionage 38
- 1.5 Transaction Processing Versus Analytic Processing 39
- 1.6 Successful BI Implementation 40
 - The Typical BI User Community 40
 - Appropriate Planning and Alignment with the Business Strategy 40
 - Real-Time, On-Demand BI Is Attainable 41
 - Developing or Acquiring BI Systems 42
 - Justification and Cost–Benefit Analysis 42
 - Security and Protection of Privacy 42
 - Integration of Systems and Applications 42
- 1.7 Analytics Overview 43
 - Descriptive Analytics 44
 - Predictive Analytics 44
 - ▶ **APPLICATION CASE 1.2 Eliminating Inefficiencies at Seattle Children’s Hospital 45**
 - ▶ **APPLICATION CASE 1.3 Analysis at the Speed of Thought 46**
 - Prescriptive Analytics 46
 - ▶ **APPLICATION CASE 1.4 Moneyball: Analytics in Sports and Movies 47**
 - ▶ **APPLICATION CASE 1.5 Analyzing Athletic Injuries 48**
 - Analytics Applied to Different Domains 48

- ▶ **APPLICATION CASE 1.6 Industrial and Commercial Bank of China (ICBC) Employs Models to Reconfigure Its Branch Network** 49
- Analytics or Data Science? 50
- 1.8 Brief Introduction to Big Data Analytics 51
 - What Is Big Data? 51
 - ▶ **APPLICATION CASE 1.7 Gilt Groupe’s Flash Sales Streamlined by Big Data Analytics** 52
- 1.9 Plan of the Book 53
- 1.10 Resources, Links, and the Teradata University Network Connection 55
 - Resources and Links 55
 - Vendors, Products, and Demos 55
 - Periodicals 55
 - The Teradata University Network Connection 55
 - The Book’s Web Site 55
 - Key Terms* 56
 - Questions for Discussion* 56
 - Exercises* 56
 - End-of-Chapter Application Case* 57
 - References* 59

Chapter 2 Data Warehousing 61

- 2.1 Opening Vignette: Isle of Capri Casinos Is Winning with Enterprise Data Warehouse 62
- 2.2 Data Warehousing Definitions and Concepts 64
 - What Is a Data Warehouse? 64
 - A Historical Perspective to Data Warehousing 64
 - Characteristics of Data Warehousing 66
 - Data Marts 67
 - Operational Data Stores 67
 - Enterprise Data Warehouses (EDW) 68
 - ▶ **APPLICATION CASE 2.1 A Better Data Plan: Well-Established TELCOs Leverage Data Warehousing and Analytics to Stay on Top in a Competitive Industry** 68
 - Metadata 69
- 2.3 Data Warehousing Process Overview 70
 - ▶ **APPLICATION CASE 2.2 Data Warehousing Helps MultiCare Save More Lives** 71
- 2.4 Data Warehousing Architectures 73
 - Alternative Data Warehousing Architectures 76
 - Which Architecture Is the Best? 79
- 2.5 Data Integration and the Extraction, Transformation, and Load (ETL) Processes 80
 - Data Integration 81
 - ▶ **APPLICATION CASE 2.3 BP Lubricants Achieves BIGS Success** 81
 - Extraction, Transformation, and Load 83

2.6	Data Warehouse Development	85
	▶ APPLICATION CASE 2.4 Things Go Better with Coke's Data Warehouse	86
	Data Warehouse Development Approaches	88
	▶ APPLICATION CASE 2.5 Starwood Hotels & Resorts Manages Hotel Profitability with Data Warehousing	89
	Additional Data Warehouse Development Considerations	91
	Representation of Data in Data Warehouse	92
	Analysis of Data in Data Warehouse	93
	OLAP Versus OLTP	93
	OLAP Operations	94
2.7	Data Warehousing Implementation Issues	97
	▶ APPLICATION CASE 2.6 EDW Helps Connect State Agencies in Michigan	99
	Massive Data Warehouses and Scalability	100
2.8	Real-Time Data Warehousing	101
	▶ APPLICATION CASE 2.7 Egg Plc Fries the Competition in Near Real Time	102
2.9	Data Warehouse Administration, Security Issues, and Future Trends	105
	The Future of Data Warehousing	107
2.10	Resources, Links, and the Teradata University Network Connection	110
	Resources and Links	110
	Cases	110
	Vendors, Products, and Demos	111
	Periodicals	111
	Additional References	111
	The Teradata University Network (TUN) Connection	111
	<i>Key Terms</i>	112
	<i>Questions for Discussion</i>	112

Chapter 3 Business Reporting, Visual Analytics, and Business Performance Management 119

3.1	Opening Vignette: Self-Service Reporting Environment Saves Millions for Corporate Customers	120
3.2	Business Reporting Definitions and Concepts	123
	What Is a Business Report?	124
	▶ APPLICATION CASE 3.1 Delta Lloyd Group Ensures Accuracy and Efficiency in Financial Reporting	126
	Components of Business Reporting Systems	127
	▶ APPLICATION CASE 3.2 Flood of Paper Ends at FEMA	128

3.3	Data and Information Visualization	129
	▶ APPLICATION CASE 3.3 Tableau Saves Blastrac Thousands of Dollars with Simplified Information Sharing	130
	A Brief History of Data Visualization	131
	▶ APPLICATION CASE 3.4 TIBCO Spotfire Provides Dana-Farber Cancer Institute with Unprecedented Insight into Cancer Vaccine Clinical Trials	133
3.4	Different Types of Charts and Graphs	134
	Basic Charts and Graphs	134
	Specialized Charts and Graphs	135
3.5	The Emergence of Data Visualization and Visual Analytics	138
	Visual Analytics	140
	High-Powered Visual Analytics Environments	140
3.6	Performance Dashboards	143
	Dashboard Design	145
	▶ APPLICATION CASE 3.5 Dallas Cowboys Score Big with Tableau and Teknion	145
	▶ APPLICATION CASE 3.6 Saudi Telecom Company Excels with Information Visualization	146
	What to Look For in a Dashboard	148
	Best Practices in Dashboard Design	148
	Benchmark Key Performance Indicators with Industry Standards	149
	Wrap the Dashboard Metrics with Contextual Metadata	149
	Validate the Dashboard Design by a Usability Specialist	149
	Prioritize and Rank Alerts/Exceptions Streamed to the Dashboard	149
	Enrich Dashboard with Business-User Comments	149
	Present Information in Three Different Levels	149
	Pick the Right Visual Construct Using Dashboard Design Principles	150
	Provide for Guided Analytics	150
3.7	Business Performance Management	150
	Closed-Loop BPM Cycle	150

PREFACE

Analytics has become the technology driver of this decade. Companies such as IBM, Oracle, Microsoft, and others are creating new organizational units focused on analytics that help businesses become more effective and efficient in their operations. Decision makers are using more computerized tools to support their work. Even consumers are using analytics tools directly or indirectly to make decisions on routine activities such as shopping, healthcare, and entertainment. The field of Business intelligence (BI) is evolving rapidly to become more focused on innovative applications of data streams that were not even captured some time back, much less analyzed in any significant way. New applications turn up daily in healthcare, sports, entertainment, supply chain management, utilities, and virtually every industry imaginable.

In addition to traditional decision support applications, this edition expands the reader's understanding of the various types of analytics by providing examples, products, services, and exercises by discussing Web-related issues throughout the text. We highlight Web intelligence/Web analytics, which parallel BI/business analytics (BA) for e-commerce and other Web applications. The book is supported by a Web site (www.pearsonglobaleditions.com/sharda), and also by an independent site at dssbibook.com. We will also provide links to software tutorials through a special section of the Web site.

The purpose of this book is to introduce the reader to these technologies that are generally called analytics but have been known by other names. This book presents the fundamentals of the techniques and the manner in which these systems are constructed and used. We follow an EEE approach to introducing these topics: **Exposure, Experience, and Explore**. The book primarily provides **exposure** to various analytics techniques and their applications. The idea is that a student will be inspired to learn from how other organizations have employed analytics to make decisions or to gain a competitive edge. We believe that such **exposure** to what is being done with analytics and how it can be achieved is the key component of learning about analytics. In describing the techniques we also introduce specific software tools that can be used for developing such applications. The book is not limited to any one software tool, so the students can **experience** these techniques using any number of available software tools. Specific suggestions are given in each chapter, but the student and the professor are able to use this book with many different software tools. Our book's companion website will include specific software guides, but students can gain **experience** with these techniques in many different ways. Finally, we hope that this **exposure** and **experience** enables and motivates a reader to **explore** the potential of these techniques in their own domain. To facilitate such **exploration** we include exercises that direct them to Teradata University Network and other sites as well that include team-oriented exercises where appropriate. We will also highlight new and innovative applications that we learn about on the book's website.

Most of the specific improvements made in this third edition concentrate on three areas: reorganization, content update, and a sharper focus. Despite the many changes, we have preserved the comprehensiveness and user friendliness that have made the text a market leader. Finally, we present accurate and updated material that is not available in any other text. We next describe the changes in the third edition.

WHAT'S NEW IN THE THIRD EDITION?

With the goal of improving the text, this edition marks a major reorganization of the text to reflect the focus on analytics. This edition is now organized around three major types of analytics. The new edition has many timely additions, and the dated content has been deleted. The following major specific changes have been made:

- ***New Organization.*** The book recognizes three types of analytics: descriptive, predictive, and prescriptive, a classification promoted by INFORMS. After introducing BI and analytics in Chapter 1, the book begins with an overview of Data Warehousing and data foundations in Chapter 2. Then, Chapter 3 covers descriptive or reporting analytics, specifically, visualization and business performance measurement. Chapter 4 covers predictive analytics. Chapter 5 extends the application of analytics to text, web, and social media. Chapter 6 introduces big data and analytics. The book concludes with Chapter 7, emerging trends and topics in business analytics including location intelligence, mobile computing, cloud-based analytics, and privacy/ethical considerations in analytics. This chapter also includes an overview of the analytics ecosystem to help the user explore all of the different ways one can participate and grow in the analytics environment. The discussion of analytics ecosystem recognizes prescriptive analytics as well.
- ***New chapters.*** The following chapters have been added:
 - Chapter 5, “Web Analytics, Web Mining & Social Analytics”** This chapter covers the popular topics of web analytics and social media analytics. It is an almost entirely new chapter. [95% new material].
 - Chapter 6, “Big Data & Analytics”** This chapter introduces the hot topics of big data and analytics. It covers the basics of major components of big data techniques and characteristics. It is also a new chapter. [99% new material].
 - Chapter 7, “Business Analytics: Emerging Trends and Future Direction”** This chapter examines several new phenomena that are already changing or are likely to change analytics. It includes coverage of geospatial in analytics, location-based analytics applications, consumer oriented analytical applications, mobile platforms, and cloud-based analytics. It also updates some coverage from the last edition on ethical and privacy considerations. It concludes with a major discussion of the analytics ecosystem. [90% new material].
- ***Streamlined coverage.*** We have made the book shorter by keeping the most commonly used content. We also mostly eliminated the preformatted online content. Instead, we will use a Web site to provide updated content and links on a regular basis. We also reduced the number of references in each chapter.
- ***Revamped author team.*** Building upon the excellent content that has been prepared by the authors of the previous editions (Turban, Sharda, Delen, and King,), this edition was revised primarily by Ramesh Sharda and Dursun Delen. Both Ramesh and Dursun have worked extensively in DSS and analytics and have industry as well as research experience.
- ***All new figures for PowerPoint.*** Although the figures in the print edition have been retained from previous editions and new figures added for the new content, all the figures have been redrawn in color and are available through the image library for use in PowerPoint presentations.
- ***A live update Web site.*** Adopters of the textbook will have access to a Web site that will include links to news stories, software, tutorials, and even YouTube videos related to topics covered in the book. This site will be accessible at <http://dssbibook.com>.

- **Revised and updated content.** Almost all of the chapters have new opening vignettes and closing cases that are based on recent stories and events. In addition, Application Cases throughout the book have been updated to include recent examples of applications of a specific technique/model. New Web site links have been added throughout the book. We also deleted many older product links and references. Finally, most chapters have new exercises, Internet assignments, and discussion questions throughout.

Specific changes made in previous chapters in the third edition are summarized next:

Chapter 1 – An Overview of Business Intelligence, Analytics and Decision

Support Introduces the three types of analytics as proposed by INFORMS: descriptive, predictive, and prescriptive analytics. A noted earlier, this classification is used in guiding the complete reorganization of the book itself. It includes about 60% new material.

Chapter 2 – Data Warehousing

- 30% new material (including the cases)
- New opening case
- Mostly new cases throughout
- NEW - A historic perspective to DW – how did we come here
- Better coverage of multidimensional modeling (star schema and snow flake schema)
- An updated coverage on Future of Data Warehousing

Chapter 3 – Business Reporting, Visual Analytics and Business Performance Management

- 60% of the material new – especially in Visual Analytics and Reporting
- Most of the cases are new

Chapter 4 – Data Mining

- 25% of the material new
- Most of the cases are new

Chapters 5–7 are almost entirely new chapters, as noted earlier.

We have retained many of the enhancements made in the last editions and updated the content. These are summarized next:

- **Links to Teradata University Network (TUN).** Most chapters include new links to TUN (teradatauniversitynetwork.com).
- **Book title.** As is already evident, the book's title and focus has changed substantially.
- **Software support.** The TUN Web site provides software support at no charge. It also provides links to free data mining and other software. In addition, the site provides exercises in the use of such software.

THE SUPPLEMENT PACKAGE

A comprehensive and flexible technology-support package is available to enhance the teaching and learning experience. The following instructor and student supplements are available on the book's Web site, www.pearsonglobaleditions.com/sharda:

- **Instructor's Manual.** The Instructor's Manual includes learning objectives for the entire course and for each chapter, answers to the questions and exercises at the end of each chapter, and teaching suggestions (including instructions for

projects). The Instructor's Manual is available on the secure faculty section of www.pearsonglobaleditions.com/sharda.

- **Test Item File and TestGen Software.** The Test Item File is a comprehensive collection of true/false, multiple-choice, fill-in-the-blank, and essay questions. The questions are rated by difficulty level, and the answers are referenced by book page number. The Test Item File is available in Microsoft Word and in the computerized form of Prentice Hall TestGen. TestGen is a comprehensive suite of tools for testing and assessment. It allows instructors to easily create and distribute tests for their courses, either by printing and distributing through traditional methods or by online delivery via a local area network (LAN) server. TestGen features wizards that assist in moving through the program, and the software is backed with full technical support. Both the Test Item File and testgen software are available on the secure faculty section of www.pearsonglobaleditions.com/sharda.
- **PowerPoint slides.** PowerPoint slides are available that illuminate and build on key concepts in the text. Faculty can download the PowerPoint slides from www.pearsonglobaleditions.com/sharda.

ACKNOWLEDGMENTS

Many individuals have provided suggestions and criticisms since the publication of the first edition of this book. Dozens of students participated in class testing of various chapters, software, and problems and assisted in collecting material. It is not possible to name everyone who participated in this project, but our thanks go to all of them. Certain individuals made significant contributions, and they deserve special recognition.

First, we appreciate the efforts of those individuals who provided formal reviews of the first through third editions (school affiliations as of the date of review):

Ann Aksut, Central Piedmont Community College
 Bay Arinze, Drexel University
 Ranjit Bose, University of New Mexico
 Marty Crossland, MidAmerica Nazarene University
 Kurt Engemann, Iona College
 Badie Farah, Eastern Michigan University
 Gary Farrar, Columbia College
 Jerry Fjermestad, New Jersey Institute of Technology
 Christie M. Fuller, Louisiana Tech University
 Martin Grossman, Bridgewater State College
 Jahangir Karimi, University of Colorado, Denver
 Huei Lee, Eastern Michigan University
 Natalie Nazarenko, SUNY Fredonia
 Asil Oztekin, University of Massachusetts Lowell
 Kala Chand Seal, Loyola Marymount University
 Roger Wilson, Fairmont State University
 Vincent Yu, Missouri University of Science and Technology
 Fan Zhao, Florida Gulf Coast University

We also appreciate the efforts of those individuals who provided formal reviews of this text and our other DSS book—Decision Support and Business Intelligence Systems, 9th Edition, Prentice Hall, 2011.

Secondly, several individuals contributed material to the text or the supporting material. Susan Baxley and Dr. David Schrader of Teradata provides special help in identifying new TUN content for the book and arranging permissions for the same. Peter Horner, Editor of *OR/MS Today* allowed us to summarize new application stories from *OR/MS Today* and *Analytics Magazine*. We also thanks INFORMS for their permission to highlight content from *Interfaces*. Assistance provided by Natraj Ponna, Daniel Asamoah, Kartik Dasika, Clara Gregory, and Amy Wallace (all of Oklahoma State University) is gratefully acknowledged for this edition.

For the previous edition, we acknowledge the contributions of Dave King (JDA Software Group, Inc.). Other major contributors to the previous edition include J. Aronson (University of Georgia), who was our coauthor, contributing to the data warehousing chapter; Mike Goul (Arizona State University), whose contributions were included in Chapter 1; and T. P. Liang (National Sun Yet-Sen University, Taiwan), who contributed material on neural networks in the previous editions. Judy Lang collaborated with all of us, provided editing, and guided us during the entire project in the first edition.

Fourth, several vendors cooperated by providing development and/or demonstration software: Acxiom (Little Rock, AR), California Scientific Software (Nevada City, CA), Cary Harwin of Catalyst Development (Yucca Valley, CA), Demandtec (San Carlos, CA), DS Group, Inc. (Greenwich, CT), Gregory Piatetsky-Shapiro of KDNuggets.com, Gary Lynn of NeuroDimension Inc. (Gainesville, Florida), Palisade Software (Newfield, New York), Promised Land Technologies (New Haven, Connecticut), Salford Systems (La Jolla, California), Sense Networks (New York, New York), Gary Miner of Statsoft, Inc. (Tulsa, Oklahoma), Ward Systems Group, Inc. (Frederick, Maryland), Idea Fisher Systems, Inc. (Irving, California), and Wordtech Systems (Orinda, California).

Fifth, special thanks to the Teradata University Network and especially to Susan Baxley, Program Director; Hugh Watson, who started TUN; Michael Goul, Barb Wixom, and Mary Gros for their encouragement to tie this book with TUN and for providing useful material for the book.

Finally, the Prentice Hall team is to be commended: Executive Editor Bob Horan, who orchestrated this project; our editorial project manager Kelly Loftus, who kept us on the timeline; Kitty Jarrett, who copyedited the manuscript; and the production team, Karalyn Holland at Prentice Hall, and the staff at GGS Book Services, who transformed the manuscript into a book.

We would like to thank all these individuals and corporations. Without their help, the creation of this book would not have been possible.

R.S.

D.D.

E.T.

The publishers wish to thank Susmi Routray of IMT Ghaziabad for reviewing the content of the Global Edition.

Note that Web site URLs are dynamic. As this book went to press, we verified that all the cited Web sites were active and valid. Web sites to which we refer in the text sometimes change or are discontinued because companies change names, are bought or sold, merge, or fail. Sometimes Web sites are down for maintenance, repair, or redesign. Most organizations have dropped the initial “www” designation for their sites, but some still use it. If you have a problem connecting to a Web site that we mention, please be patient and simply run a Web search to try to identify the new site. Most times, the new site can be found quickly. We apologize in advance for this inconvenience.

ABOUT THE AUTHORS

Ramesh Sharda (M.B.A., Ph.D., University of Wisconsin–Madison) is director of the Ph.D. in Business for Executives Program and Institute for Research in Information Systems (IRIS), ConocoPhillips Chair of Management of Technology, and a Regents Professor of Management Science and Information Systems in the Spears School of Business at Oklahoma State University (OSU). About 200 papers describing his research have been published in major journals, including *Operations Research*, *Management Science*, *Information Systems Research*, *Decision Support Systems*, and *Journal of MIS*. He cofounded the AIS SIG on Decision Support Systems and Knowledge Management (SIGDSS). Dr. Sharda serves on several editorial boards, including those of *INFORMS Journal on Computing*, *Decision Support Systems*, and *ACM Transactions on Management Information Systems*. He has authored and edited several textbooks and research books and serves as the co-editor of several book series (Integrated Series in Information Systems, Operations Research/Computer Science Interfaces, and Annals of Information Systems) with Springer. He is also currently serving as the executive director of the Teradata University Network. His current research interests are in decision support systems, business analytics, and technologies for managing information overload.

Dursun Delen (Ph.D., Oklahoma State University) is the Spears and Patterson Chairs in Business Analytics, Director of Research for the Center for Health Systems Innovation, and Professor of Management Science and Information Systems in the Spears School of Business at Oklahoma State University (OSU). Prior to his academic career, he worked for a privately owned research and consultancy company, Knowledge Based Systems Inc., in College Station, Texas, as a research scientist for five years, during which he led a number of decision support and other information systems–related research projects funded by federal agencies, such as DoD, NASA, NIST, and DOE. Dr. Delen’s research has appeared in major journals including *Decision Support Systems*, *Communications of the ACM*, *Computers and Operations Research*, *Computers in Industry*, *Journal of Production Operations Management*, *Artificial Intelligence in Medicine*, *Expert Systems with Applications*, and *IEEE Wireless Communications*, among others. He recently published four textbooks: *Advanced Data Mining Techniques* with Springer, 2008; *Decision Support and Business Intelligence Systems* with Prentice Hall, 2010; *Business Intelligence: A Managerial Approach* with Prentice Hall, 2010; and *Practical Text Mining* with Elsevier, 2012. He is often invited to national and international conferences for keynote addresses on topics related to data/text mining, business intelligence, decision support systems, and knowledge management. He served as the general co-chair for the 4th International Conference on Network Computing and Advanced Information Management (September 2–4, 2008, in Soul, South Korea) and regularly chairs tracks and mini-tracks at various information systems conferences. He is the associate editor-in-chief for *International Journal of Experimental Algorithms*, associate editor for *International Journal of RF Technologies* and *Journal of Decision Analytics*, and is on the editorial boards of five other technical journals. His research and teaching interests are in data and text mining, business analytics, decision support systems, knowledge management, business intelligence, and enterprise modeling.

Efraim Turban (M.B.A., Ph.D., University of California, Berkeley) is a visiting scholar at the Pacific Institute for Information System Management, University of Hawaii. Prior to this, he was on the staff of several universities, including City University of Hong Kong; Lehigh University; Florida International University; California State University, Long

Beach; Eastern Illinois University; and the University of Southern California. Dr. Turban is the author of more than 100 refereed papers published in leading journals, such as *Management Science*, *MIS Quarterly*, and *Decision Support Systems*. He is also the author of 20 books, including *Electronic Commerce: A Managerial Perspective* and *Information Technology for Management*. He is also a consultant to major corporations worldwide. Dr. Turban's current areas of interest are Web-based decision support systems, social commerce, and collaborative decision making.

BUSINESS INTELLIGENCE

A MANAGERIAL PERSPECTIVE ON ANALYTICS

This book deals with a collection of computer technologies that support managerial work—essentially, decision making. These technologies have had a profound impact on corporate strategy, performance, and competitiveness. Collectively, these technologies are called *business analytics* and *business intelligence*.

An Overview of Business Intelligence, Analytics, and Decision Support

LEARNING OBJECTIVES

- Understand today's turbulent business environment and describe how organizations survive and even excel in such an environment (solving problems and exploiting opportunities)
- Understand the need for computerized support of managerial decision making
- Describe the business intelligence (BI) methodology and concepts
- Understand the various types of analytics

The business environment (climate) is constantly changing, and it is becoming more and more complex. Organizations, private and public, are under pressures that force them to respond quickly to changing conditions and to be innovative in the way they operate. Such activities require organizations to be agile and to make frequent and quick strategic, tactical, and operational decisions, some of which are very complex. Making such decisions may require considerable amounts of relevant data, information, and knowledge. Processing these, in the framework of the needed decisions, must be done quickly, frequently in real time, and usually requires some computerized support.

This book is about using business analytics as computerized support for managerial decision making. It concentrates the theoretical and conceptual foundations of decision support, as well as on the commercial tools and techniques that are available. This introductory chapter provides more details of these topics as well as an overview of the book. This chapter has the following sections:

- 1.1** Opening Vignette: Magpie Sensing Employs Analytics to Manage a Vaccine Supply Chain Effectively and Safely 28
- 1.2** Changing Business Environments and Computerized Decision Support 30
- 1.3** A Framework for Business Intelligence (BI) 32
- 1.4** Intelligence Creation, Use, and BI Governance 37

- 1.5 Transaction Processing Versus Analytic Processing 39
- 1.6 Successful BI Implementation 40
- 1.7 Analytics Overview 43
- 1.8 Brief Introduction to Big Data Analytics 51
- 1.9 Plan of the Book 53
- 1.10 Resources, Links, and the Teradata University Network Connection 55

1.1 OPENING VIGNETTE: Magpie Sensing Employs Analytics to Manage a Vaccine Supply Chain Effectively and Safely

Cold chain in healthcare is defined as the temperature-controlled supply chain involving a system of transporting and storing vaccines and pharmaceutical drugs. It consists of three major components—transport and storage equipment, trained personnel, and efficient management procedures. The majority of the vaccines in the cold chain are typically maintained at a temperature of 35–46 degrees Fahrenheit (2–8 degrees Centigrade). Maintaining cold chain integrity is extremely important for healthcare product manufacturers.

Especially for vaccines, improper storage and handling practices that compromise vaccine viability prove to be a costly, time-consuming affair. Vaccines must be stored properly from manufacture until they are available for use. Any extreme temperatures of heat or cold will reduce the vaccine potency; such vaccines, if administered, might not yield effective results or could cause adverse effects.

Effectively maintaining the temperatures of the storage units throughout the healthcare supply chain in real time (i.e., beginning from the gathering of the resources, manufacturing, distribution, and dispensing of the products) is the most effective solution desired in the cold chain. The location-tagged real-time environmental data about the storage units help in monitoring the cold chain for the spoiled products. The chain of custody can be easily identified to assign product liability.

A study conducted by the Centers for Disease Control and Prevention (CDC) looked at the handling of cold chain vaccines by 45 healthcare providers around United States. The CDC reported that three-quarters of the providers experienced serious cold chain violations.

A WAY TOWARD A POSSIBLE SOLUTION

Magpie Sensing, a start-up project under Ebers Smith and Douglas Associated LLC., provides a suite of cold chain monitoring and analysis technologies for the healthcare industry. It is a shippable, wireless temperature and humidity monitor that provides real-time, location-aware tracking of the cold chain products during the shipment. Magpie Sensing's solutions rely on rich analytics algorithms that leverage the data gathered from the monitoring devices to improve the efficiency of cold chain processes and predict cold storage problems before they occur. Magpie Sensing applies all three types of analytical techniques—descriptive, predictive, and prescriptive analytics—to turn the raw data returned from the monitoring devices into actionable recommendations and warnings.

The properties of the cold storage system, which include the set point of the storage system's thermostat, the typical range of temperature values in the storage system, and the duty cycle of the system's compressor, are monitored and reported in real time. This information helps trained personnel ensure that the storage unit is properly configured to

store a particular product. All temperature information is displayed on a dashboard that shows a graph of the temperature inside a specific storage unit.

Based on the information derived from the monitoring devices, Magpie's predictive analytic algorithms can determine the set point of the storage unit's thermostat and alert the system's users if the system is incorrectly configured, depending on the various types of products stored. Magpie's system also sends alerts about possible temperature violations based on the storage unit's average temperature and subsequent compressor cycle runs, which may drop the temperature below the freezing point. Magpie's predictive analytics further report possible human errors, such as failing to shut the storage unit doors or having an incomplete seal, by analyzing the temperature trend and alerting the users via Web interface, text message, or audible alert before the temperature bounds are actually violated. A compressor or a power failure also can be detected. The estimated time before the storage unit reaches an unsafe temperature also can be determined, which allows users to look for backup solutions, such as using dry ice to restore power or working on other actions to prevent product spoilage.

In addition to predictive analytics, Magpie Sensing's analytics systems can provide prescriptive recommendations for improving the cold storage processes and business decision making. Prescriptive analytics help users dial in the optimal temperature setting, which helps to achieve the correct balance between freezing and spoilage risk; this, in turn, provides a cushion-time to react to the situation before the products spoil. Its prescriptive analytics also gather useful meta-information on cold storage units, including the times of day that are busiest or periods where the system's doors are opened. This can be used to help formulate additional design training plans and institutional policies to ensure that the system is properly maintained and not overused.

Furthermore, prescriptive analytics can be used to guide equipment purchase decisions by constantly analyzing the performance of current storage units. Based on the storage system's efficiency, decisions on distributing the products across available storage units can be made based on the product's sensitivity.

Using Magpie Sensing's cold chain analytics, additional manufacturing time and expenditure can be eliminated by ensuring product safety throughout the supply chain, and effective products can be administered to the patients. Compliance with state and federal safety regulations can be better achieved through automatic data gathering and reporting about the products involved in the cold chain.

QUESTIONS FOR THE OPENING VIGNETTE

1. What information is provided by the descriptive analytics employed at Magpie Sensing?
2. What type of support is provided by the predictive analytics employed at Magpie Sensing?
3. How do prescriptive analytics help in business decision making?
4. What are possible ways to report actionable information in real time to the concerned users of the system?
5. What other situations might need real-time monitoring applications?

WHAT WE CAN LEARN FROM THIS VIGNETTE

This vignette illustrates how data from a business process can be used to generate insights at various levels. First, the graphical analysis of the data (termed *reporting analytics*) allows users to get a good feel for the situation. Then, additional analysis using **data mining** techniques can be used to estimate what future behavior would be

like. This is the domain of predictive analytics. Such analysis can then be taken to create specific recommendations for operators. This is an example of prescriptive analytics. Finally, this opening vignette also suggests that innovative applications of analytics can create new business ventures. Identifying opportunities for applications of analytics and assisting with decision making in specific domains is an emerging entrepreneurial opportunity.

1.2 CHANGING BUSINESS ENVIRONMENTS AND COMPUTERIZED DECISION SUPPORT

The opening vignette illustrates how an organization can employ analytics to develop reports on what is happening, predict what is likely to happen, and then also make decisions to make best use of the situation at hand. These steps require an organization to collect and analyze vast stores of data. Companies are moving aggressively to computerized support of their operations. To understand why companies are embracing computerized support, including business intelligence, we developed a model called the *Business Pressures–Responses–Support Model*, which is shown in Figure 1.1.

The Business Pressures–Responses–Support Model

The Business Pressures–Responses–Support Model, as its name indicates, has three components: business pressures that result from today’s business climate; responses (actions taken) by companies to counter the pressures (or to take advantage of the opportunities available in the environment); and computerized support that facilitates

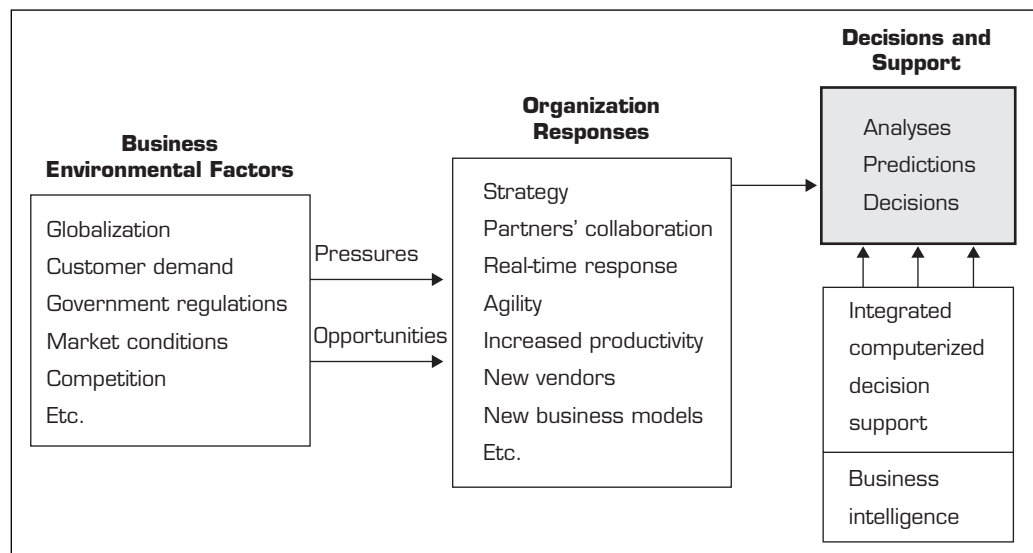

FIGURE 1.1 The Business Pressures–Responses–Support Model.
