

Seventh Edition

Principles of Economics

N. Gregory Mankiw

Principles of Economics: a Guided Tour

INTRODUCTION

- 1 Ten Principles of Economics ————— *The study of economics is guided by a few big ideas.*
- 2 Thinking Like an Economist ————— *Economists view the world as both scientists and policymakers.*
- 3 Interdependence and the Gains from Trade ——— *The theory of comparative advantage explains how people benefit from economic interdependence.*

HOW MARKETS WORK

- 4 The Market Forces of Supply and Demand ———
 - 5 Elasticity and Its Application —————
 - 6 Supply, Demand, and Government Policies ———
- How does the economy coordinate interdependent economic actors? Through the market forces of supply and demand.*
- The tools of supply and demand are put to work to examine the effects of various government policies.*

MARKETS AND WELFARE

- 7 Consumers, Producers, and the Efficiency of Markets ———
 - 8 Application: The Costs of Taxation —————
 - 9 Application: International Trade —————
- Why is the equilibrium of supply and demand desirable for society as a whole? The concepts of consumer and producer surplus explain the efficiency of markets, the costs of taxation, and the benefits of international trade.*

THE ECONOMICS OF THE PUBLIC SECTOR

- 10 Externalities —————
 - 11 Public Goods and Common Resources ———
 - 12 The Design of the Tax System —————
- Market outcomes are not always efficient, and governments can sometimes remedy market failure.*
- To fund programs, governments raise revenue through their tax systems, which are designed with an eye toward balancing efficiency and equity.*

FIRM BEHAVIOR AND THE ORGANIZATION OF INDUSTRY

- 13 The Costs of Production —————
 - 14 Firms in Competitive Markets —————
 - 15 Monopoly —————
 - 16 Monopolistic Competition —————
 - 17 Oligopoly —————
- The theory of the firm sheds light on the decisions that lie behind supply in competitive markets.*
- Firms with market power can cause market outcomes to be inefficient.*

THE ECONOMICS OF LABOR MARKETS

- 18 The Markets for the Factors of Production
- 19 Earnings and Discrimination
- 20 Income Inequality and Poverty

These chapters examine the special features of labor markets, in which most people earn most of their income.

TOPICS FOR FURTHER STUDY

- 21 The Theory of Consumer Choice
- 22 Frontiers of Microeconomics

Additional topics in microeconomics include household decision making, asymmetric information, political economy, and behavioral economics.

THE DATA OF MACROECONOMICS

- 23 Measuring a Nation's Income
- 24 Measuring the Cost of Living

The overall quantity of production and the overall price level are used to monitor developments in the economy as a whole.

THE REAL ECONOMY IN THE LONG RUN

- 25 Production and Growth
- 26 Saving, Investment, and the Financial System
- 27 The Basic Tools of Finance
- 28 Unemployment

These chapters describe the forces that in the long run determine key real variables, including growth in GDP, saving, investment, real interest rates, and unemployment.

MONEY AND PRICES IN THE LONG RUN

- 29 The Monetary System
- 30 Money Growth and Inflation

The monetary system is crucial in determining the long-run behavior of the price level, the inflation rate, and other nominal variables.

THE MACROECONOMICS OF OPEN ECONOMIES

- 31 Open-Economy Macroeconomics: Basic Concepts
- 32 A Macroeconomic Theory of the Open Economy

A nation's economic interactions with other nations are described by its trade balance, net foreign investment, and exchange rate.

A long-run model of the open economy explains the determinants of the trade balance, the real exchange rate, and other real variables.

SHORT-RUN ECONOMIC FLUCTUATIONS

- 33 Aggregate Demand and Aggregate Supply
- 34 The Influence of Monetary and Fiscal Policy on Aggregate Demand
- 35 The Short-Run Trade-off between Inflation and Unemployment

The model of aggregate demand and aggregate supply explains short-run economic fluctuations, the short-run effects of monetary and fiscal policy, and the short-run linkage between real and nominal variables.

FINAL THOUGHTS

- 36 Six Debates over Macroeconomic Policy

A capstone chapter presents both sides of six major debates over economic policy.

About the Author

N. Gregory Mankiw is the Robert M. Beren Professor of Economics at Harvard University. As a student, he studied economics at Princeton University and MIT. As a teacher, he has taught macroeconomics, microeconomics, statistics, and principles of economics. He even spent one summer long ago as a sailing instructor on Long Beach Island.

Professor Mankiw is a prolific writer and a regular participant in academic and policy debates. His work has been published in scholarly journals, such as the *American Economic Review*, *Journal of Political Economy*, and *Quarterly Journal of Economics*, and in more popular forums, such as the *New York Times* and *The Wall Street Journal*. He is also author of the best-selling intermediate-level textbook *Macroeconomics* (Worth Publishers). In addition to his teaching, research, and writing, Professor Mankiw has been a research associate of the National Bureau of Economic Research, an adviser to the Congressional Budget Office and the Federal Reserve Banks of Boston and New York, and a member of the ETS test development committee for the Advanced Placement exam in economics. From 2003 to 2005, he served as chairman of the President's Council of Economic Advisers.

Professor Mankiw lives in Wellesley, Massachusetts, with his wife Deborah, three children, Catherine, Nicholas, and Peter, and their border terrier, Tobin.

Brief Contents

Part I Introduction 1

- 1 Ten Principles of Economics 3
- 2 Thinking Like an Economist 19
- 3 Interdependence and the Gains from Trade 47

Part II How Markets Work 63

- 4 The Market Forces of Supply and Demand 65
- 5 Elasticity and Its Application 89
- 6 Supply, Demand, and Government Policies 111

Part III Markets and Welfare 133

- 7 Consumers, Producers, and the Efficiency of Markets 135
- 8 Application: The Costs of Taxation 155
- 9 Application: International Trade 171

Part IV The Economics of the Public Sector 193

- 10 Externalities 195
- 11 Public Goods and Common Resources 215
- 12 The Design of the Tax System 233

Part V Firm Behavior and the Organization of Industry 257

- 13 The Costs of Production 259
- 14 Firms in Competitive Markets 279
- 15 Monopoly 299
- 16 Monopolistic Competition 329
- 17 Oligopoly 347

Part VI The Economics of Labor Markets 371

- 18 The Markets for the Factors of Production 373
- 19 Earnings and Discrimination 395
- 20 Income Inequality and Poverty 413

Part VII Topics for Further Study 433

- 21 The Theory of Consumer Choice 435
- 22 Frontiers of Microeconomics 461

Part VIII The Data of Macroeconomics 481

- 23 Measuring a Nation's Income 483
- 24 Measuring the Cost of Living 505

Part IX The Real Economy in the Long Run 521

- 25 Production and Growth 523
- 26 Saving, Investment, and the Financial System 547
- 27 The Basic Tools of Finance 569
- 28 Unemployment 585

Part X Money and Prices in the Long Run 607

- 29 The Monetary System 609
- 30 Money Growth and Inflation 633

Part XI The Macroeconomics of Open Economies 657

- 31 Open-Economy Macroeconomics: Basic Concepts 659
- 32 A Macroeconomic Theory of the Open Economy 683

Part XII Short-Run Economic Fluctuations 705

- 33 Aggregate Demand and Aggregate Supply 707
- 34 The Influence of Monetary and Fiscal Policy on Aggregate Demand 745
- 35 The Short-Run Trade-off between Inflation and Unemployment 769

Part XIII Final Thoughts 793

- 36 Six Debates over Macroeconomic Policy 795

Preface to the Student

“**E**conomics is a study of mankind in the ordinary business of life.” So wrote Alfred Marshall, the great 19th-century economist, in his textbook, *Principles of Economics*. Although we have learned much about the economy since Marshall’s time, this definition of economics is as true today as it was in 1890, when the first edition of his text was published.

Why should you, as a student at the beginning of the 21st century, embark on the study of economics? There are three reasons.

The first reason to study economics is that it will help you understand the world in which you live. There are many questions about the economy that might spark your curiosity. Why are apartments so hard to find in New York City? Why do airlines charge less for a round-trip ticket if the traveler stays over a Saturday night? Why is Leonardo DiCaprio paid so much to star in movies? Why are living standards so meager in many African countries? Why do some countries have high rates of inflation while others have stable prices? Why are jobs easy to find in some years and hard to find in others? These are just a few of the questions that a course in economics will help you answer.

The second reason to study economics is that it will make you a more astute participant in the economy. As you go about your life, you make many economic decisions. While you are a student, you decide how many years to stay in school. Once you take a job, you decide how much of your income to spend, how much to save, and how to invest your savings. Someday you may find yourself running a small business or a large corporation, and you will decide what prices to charge for your products. The insights developed in the coming chapters will give you a new perspective on how best to make these decisions. Studying economics will not by itself make you rich, but it will give you some tools that may help in that endeavor.

The third reason to study economics is that it will give you a better understanding of both the potential and the limits of economic policy. Economic questions are always on the minds of policymakers in mayors’ offices, governors’ mansions, and the White House. What are the burdens associated with alternative forms of taxation? What are the effects of free trade with other countries? What is the best way to protect the environment? How does a government budget deficit affect the economy? As a voter, you help choose the policies that guide the allocation of society’s resources. An understanding of economics will help you carry out that responsibility. And who knows: Perhaps someday you will end up as one of those policymakers yourself.

Thus, the principles of economics can be applied in many of life’s situations. Whether the future finds you reading the newspaper, running a business, or sitting in the Oval Office, you will be glad that you studied economics.

Acknowledgments

In writing this book, I benefited from the input of many talented people. Indeed, the list of people who have contributed to this project is so long, and their contributions so valuable, that it seems an injustice that only a single name appears on the cover.

Let me begin with my colleagues in the economics profession. The seven editions of this text and its supplemental materials have benefited enormously from their input. In reviews and surveys, they have offered suggestions, identified challenges, and shared ideas from their own classroom experience. I am indebted to them for the perspectives they have brought to the text. Unfortunately, the list has become too long to thank those who contributed to previous editions, even though students reading the current edition are still benefiting from their insights.

Most important in this process have been Ron Cronovich (Carthage College) and David Hakes (University of Northern Iowa). Ron and David, both dedicated teachers, have served as reliable sounding boards for ideas and hardworking partners with me in putting together the superb package of supplements.

The following reviewers of the sixth edition provided suggestions for refining the content, organization, and approach in the seventh.

Mark Abajian, *San Diego Mesa College*

The team of editors who worked on this book improved it tremendously. Jane Tufts, developmental editor, provided truly spectacular editing—as she always does. Mike Worls, economics product director, did a splendid job of overseeing the many people involved in such a large project. Jennifer Thomas, product development manager; Clara Goosman, content developer; and Elizabeth Beiting-Lipps, associate content developer, were crucial in assembling an extensive and thoughtful group of reviewers to give me feedback on the previous edition while putting together an excellent team to revise the supplements. Colleen Farmer, senior content project manager, and Katy Gabel, project manager, had the patience and dedication necessary to turn my manuscript into this book. Michelle Kunkler, senior art director, gave this book its clean, friendly look. Greg LaFever, the illustrator, helped make the book more visually appealing and the economics in it less abstract. Pamela Rockwell, copyeditor, refined my prose, and PreMediaGlobal prepared a careful and thorough index. John Carey, senior market development manager, and Robin LeFevre, senior brand manager, worked long hours getting the word out to potential users of this book. The rest of the Cengage team was also consistently professional, enthusiastic, and dedicated.

I am grateful also to Lisa Mogilanski and Alex Sareyan, two star Harvard undergraduates, who helped me refine the manuscript and check the page proofs for this edition.

As always, I must thank my “in-house” editor, Deborah Mankiw. As the first reader of most things I write, she continued to offer just the right mix of criticism and encouragement.

Finally, I would like to mention my three children, Catherine, Nicholas, and Peter. Their contribution to this book was putting up with a father spending too many hours in his study. The four of us have much in common—not least of which is our love of ice cream (which becomes apparent in Chapter 4). I am grateful to Nicholas in particular for helping me check the page proofs for this edition. In case you didn’t notice, Nick, it was just my way of tricking you into learning a bit of economics.

Ten Principles of Economics 3

1-1 How People Make Decisions 4
1-1a Principle 1: People Face Trade-offs 4
1-1b Principle 2: The Cost of Something Is What You Give Up to Get It 5
1-1c Principle 3: Rational People Think at the Margin 6
1-1d Principle 4: People Respond to Incentives 7
Case Study: The Incentive Effects of Gasoline Prices 8

1-2 How People Interact 9
1-2a Principle 5: Trade Can Make Everyone Better Off 9
1-2b Principle 6: Markets Are Usually a Good Way to Organize Economic Activity 10
1-2c Principle 7: Governments Can Sometimes Improve Market Outcomes 11
FYI: Adam Smith and the Invisible Hand 11

1-3 How the Economy as a Whole Works 13
1-3a Principle 8: A Country's Standard of Living Depends on Its Ability to Produce Goods and Services 13

1-3b Principle 9: Prices Rise When the Government Prints Too Much Money 13
In The News: Why You Should Study Economics 14
1-3c Principle 10: Society Faces a Short-Run Trade-off between Inflation and Unemployment 15

1-4 Conclusion 16

CHAPTER 2

Thinking Like an Economist 19

2-1 The Economist as Scientist 20
2-1a The Scientific Method: Observation, Theory, and More Observation 20
2-1b The Role of Assumptions 21
2-1c Economic Models 22
2-1d Our First Model: The Circular-Flow Diagram 22
2-1e Our Second Model: The Production Possibilities Frontier 24
2-1f Microeconomics and Macroeconomics 27

2-2 The Economist as Policy Adviser 27
2-2a Positive versus Normative Analysis 28
2-2b Economists in Washington 28
2-2c Why Economists' Advice Is Not Always Followed 29

2-3 Why Economists Disagree 30
2-3a Differences in Scientific Judgments 30
2-3b Differences in Values 31
2-3c Perception versus Reality 31
In The News: Actual Economists and Virtual Realities 33

2-4 Let's Get Going 34
Summary 34
Key Concepts 34
Questions for Review 35
Quick Check Multiple Choice 35
Problems and Applications 35

APPENDIX Graphing: A Brief Review 37
Graphs of a Single Variable 37
Graphs of Two Variables: The Coordinate System 38
Curves in the Coordinate System 39
Slope 41
Cause and Effect 43

CHAPTER 3

Interdependence and the Gains from Trade 47

3-1 A Parable for the Modern Economy 48

- 3-1a Production Possibilities 48
- 3-1b Specialization and Trade 50

3-2 Comparative Advantage: The Driving Force of Specialization 52

- 3-2a Absolute Advantage 52
- 3-2b Opportunity Cost and Comparative Advantage 52
- 3-2c Comparative Advantage and Trade 53
- 3-2d The Price of the Trade 54

FYI: The Legacy of Adam Smith and David Ricardo 55

3-3 Applications of Comparative Advantage 55

- 3-3a Should Tom Brady Mow His Own Lawn? 55
- In The News:** Economics within a Marriage 56
- 3-3b Should the United States Trade with Other Countries? 57

3-4 Conclusion 58

Summary 59

Key Concepts 59

Questions for Review 59

Quick Check Multiple Choice 59

Problems and Applications 60

Part II How Markets Work 63

CHAPTER 4

The Market Forces of Supply and Demand 65

4-1 Markets and Competition 66

- 4-1a What Is a Market? 66
- 4-1b What Is Competition? 66

4-2 Demand 67

- 4-2a The Demand Curve: The Relationship between Price and Quantity Demanded 67
- 4-2b Market Demand versus Individual Demand 68
- 4-2c Shifts in the Demand Curve 69

Case Study: Two Ways to Reduce the Quantity of Smoking Demanded 71

4-3 Supply 73

- 4-3a The Supply Curve: The Relationship between Price and Quantity Supplied 73
- 4-3b Market Supply versus Individual Supply 74
- 4-3c Shifts in the Supply Curve 75

4-4 Supply and Demand Together 77

- 4-4a Equilibrium 77
- 4-4b Three Steps to Analyzing Changes in Equilibrium 79

4-5 Conclusion: How Prices Allocate Resources 83

In The News: Price Increases after Disasters 84

Summary 84

Key Concepts 86

Questions for Review 86

Quick Check Multiple Choice 86

Problems and Applications 87

CHAPTER 5

Elasticity and Its Application 89

5-1 The Elasticity of Demand 90

- 5-1a The Price Elasticity of Demand and Its Determinants 90
- 5-1b Computing the Price Elasticity of Demand 91
- 5-1c The Midpoint Method: A Better Way to Calculate Percentage Changes and Elasticities 91
- 5-1d The Variety of Demand Curves 92
- 5-1e Total Revenue and the Price Elasticity of Demand 94
- FYI:** A Few Elasticities from the Real World 94
- 5-1f Elasticity and Total Revenue along a Linear Demand Curve 96
- 5-1g Other Demand Elasticities 97

5-2 The Elasticity of Supply 98

- 5-2a The Price Elasticity of Supply and Its Determinants 98
- 5-2b Computing the Price Elasticity of Supply 99
- 5-2c The Variety of Supply Curves 99

5-3 Three Applications of Supply, Demand, and Elasticity 101

- 5-3a Can Good News for Farming Be Bad News for Farmers? 102
- 5-3b Why Did OPEC Fail to Keep the Price of Oil High? 104
- 5-3c Does Drug Interdiction Increase or Decrease Drug-Related Crime? 105

5-4 Conclusion 107

Summary 107

Key Concepts 108

Questions for Review 108

Quick Check Multiple Choice 108

Problems and Applications 109

CHAPTER 6

Supply, Demand, and Government Policies 111

6-1 Controls on Prices 112

6-1a How Price Ceilings Affect Market Outcomes 112

Case Study: Lines at the Gas Pump 114

Case Study: Rent Control in the Short Run and the Long Run 115

6-1b How Price Floors Affect Market Outcomes 116

Case Study: The Minimum Wage 117

6-1c Evaluating Price Controls 119

In The News: Venezuela versus the Market 120

6-2 Taxes 121

6-2a How Taxes on Sellers Affect Market Outcomes 122

6-2b How Taxes on Buyers Affect Market Outcomes 123

Case Study: Can Congress Distribute the Burden of a Payroll Tax? 125

6-2c Elasticity and Tax Incidence 126

Case Study: Who Pays the Luxury Tax? 128

6-3 Conclusion 128

Summary 129

Key Concepts 129

Questions for Review 129

Quick Check Multiple Choice 129

Problems and Applications 130

Part III Markets and Welfare 133

CHAPTER 7

Consumers, Producers, and the Efficiency of Markets 135

7-1 Consumer Surplus 136

7-1a Willingness to Pay 136

7-1b Using the Demand Curve to Measure Consumer Surplus 137

7-1c How a Lower Price Raises Consumer Surplus 138

7-1d What Does Consumer Surplus Measure? 139

7-2 Producer Surplus 141

7-2a Cost and the Willingness to Sell 141

7-2b Using the Supply Curve to Measure Producer Surplus 142

7-2c How a Higher Price Raises Producer Surplus 143

7-3 Market Efficiency 144

7-3a The Benevolent Social Planner 145

7-3b Evaluating the Market Equilibrium 146

In The News: The Invisible Hand Can Park Your Car 148

Case Study: Should There Be a Market in Organs? 148

7-4 Conclusion: Market Efficiency and Market Failure 150

Summary 151

Key Concepts 151

Questions for Review 151

Quick Check Multiple Choice 151

Problems and Applications 152

CHAPTER 8

Application: The Costs of Taxation 155

8-1 The Deadweight Loss of Taxation 156

8-1a How a Tax Affects Market Participants 157

8-1b Deadweight Losses and the Gains from Trade 159

8-2 The Determinants of the Deadweight Loss 160

Case Study: The Deadweight Loss Debate 162

8-3 Deadweight Loss and Tax Revenue as Taxes Vary 163

Case Study: The Laffer Curve and Supply-Side Economics 164

In The News: The Tax Debate 166

8-4 Conclusion 168

Summary 168

Key Concept 168

Questions for Review 168

Quick Check Multiple Choice 169

Problems and Applications 169

CHAPTER 9

Application: International Trade 171

9-1 The Determinants of Trade 172

9-1a The Equilibrium without Trade 172

9-1b The World Price and Comparative Advantage 173

9-2 The Winners and Losers from Trade 174

9-2a The Gains and Losses of an Exporting Country 174

9-2b The Gains and Losses of an Importing Country 175

9-2c The Effects of a Tariff 177

FYI: Import Quotas: Another Way to Restrict Trade 179

9-2d The Lessons for Trade Policy 179

9-2e Other Benefits of International Trade 180

In The News: Threats to Free Trade 181

9-3 The Arguments for Restricting Trade 182

In The News: Should the Winners from Free Trade Compensate the Losers? 183

9-3a The Jobs Argument 183
 9-3b The National-Security Argument 184
In The News: Second Thoughts about Free Trade 184
 9-3c The Infant-Industry Argument 185
 9-3d The Unfair-Competition Argument 186
 9-3e The Protection-as-a-Bargaining-Chip Argument 186
Case Study: Trade Agreements and the World Trade Organization 187

9-4 Conclusion 188
 Summary 189
 Key Concepts 189
 Questions for Review 189
 Quick Check Multiple Choice 189
 Problems and Applications 190

Part IV The Economics of the Public Sector 193

CHAPTER 10

Externalities 195

10-1 Externalities and Market Inefficiency 197
 10-1a Welfare Economics: A Recap 197
 10-1b Negative Externalities 198
 10-1c Positive Externalities 199
In The News: The Externalities of Country Living 200
Case Study: Technology Spillovers, Industrial Policy, and Patent Protection 201

10-2 Public Policies toward Externalities 202
 10-2a Command-and-Control Policies: Regulation 202
 10-2b Market-Based Policy 1: Corrective Taxes and Subsidies 203
Case Study: Why Is Gasoline Taxed So Heavily? 204
 10-2c Market-Based Policy 2: Tradable Pollution Permits 205
 10-2d Objections to the Economic Analysis of Pollution 207
In The News: What Should We Do about Climate Change? 208

10-3 Private Solutions to Externalities 208
 10-3a The Types of Private Solutions 208

10-3b The Coase Theorem 209
 10-3c Why Private Solutions Do Not Always Work 211

10-4 Conclusion 211
 Summary 212
 Key Concepts 212
 Questions for Review 212
 Quick Check Multiple Choice 213
 Problems and Applications 213

CHAPTER 11

Public Goods and Common Resources 215

11-1 The Different Kinds of Goods 216

11-2 Public Goods 218
 11-2a The Free-Rider Problem 218
 11-2b Some Important Public Goods 218
Case Study: Are Lighthouses Public Goods? 221
 11-2c The Difficult Job of Cost-Benefit Analysis 221
Case Study: How Much Is a Life Worth? 222

11-3 Common Resources 223
 11-3a The Tragedy of the Commons 223
In The News: The Case for Toll Roads 224
 11-3b Some Important Common Resources 225
Case Study: Why the Cow Is Not Extinct 227

11-4 Conclusion: The Importance of Property Rights 228
 Summary 228
 Key Concepts 229
 Questions for Review 229
 Quick Check Multiple Choice 229
 Problems and Applications 229

CHAPTER 12

The Design of the Tax System 233

12-1 A Financial Overview of the U.S. Government 234
 12-1a The Federal Government 235
Case Study: The Fiscal Challenge Ahead 238
 12-1b State and Local Governments 240

12-2 Taxes and Efficiency 242
 12-2a Deadweight Losses 243
Case Study: Should Income or Consumption Be Taxed? 243
 12-2b Administrative Burden 244
 12-2c Marginal Tax Rates versus Average Tax Rates 245
 12-2d Lump-Sum Taxes 245

12-3 Taxes and Equity 246
 12-3a The Benefits Principle 246
 12-3b The Ability-to-Pay Principle 247
Case Study: How the Tax Burden Is Distributed 248
 12-3c Tax Incidence and Tax Equity 249
In The News: Tax Expenditures 250
Case Study: Who Pays the Corporate Income Tax? 250

11-4 Conclusion: The Trade-off between Equity and Efficiency 252

Summary	253
Key Concepts	253
Questions for Review	253
Quick Check Multiple Choice	254
Problems and Applications	254

Part V Firm Behavior and the Organization of Industry 257

CHAPTER 13

The Costs of Production 259

13-1 What Are Costs?	260
13-1a Total Revenue, Total Cost, and Profit	260
13-1b Costs as Opportunity Costs	260
13-1c The Cost of Capital as an Opportunity Cost	261
13-1d Economic Profit versus Accounting Profit	262
13-2 Production and Costs	263
13-2a The Production Function	263
13-2b From the Production Function to the Total-Cost Curve	265
13-3 The Various Measures of Cost	265
13-3a Fixed and Variable Costs	266
13-3b Average and Marginal Cost	267
13-3c Cost Curves and Their Shapes	268
13-3d Typical Cost Curves	270
13-4 Costs in the Short Run and in the Long Run	271
13-4a The Relationship between Short-Run and Long-Run Average Total Cost	271
13-4b Economies and Diseconomies of Scale	272
FYI: Lessons from a Pin Factory	273
13-5 Conclusion	274
Summary	274
Key Concepts	275
Questions for Review	275

Quick Check Multiple Choice	275
Problems and Applications	276

CHAPTER 14

Firms in Competitive Markets 279

14-1 What Is a Competitive Market?	280
14-1a The Meaning of Competition	280
14-1b The Revenue of a Competitive Firm	280
14-2 Profit Maximization and the Competitive Firm's Supply Curve	282
14-2a A Simple Example of Profit Maximization	282
14-2b The Marginal-Cost Curve and the Firm's Supply Decision	283
14-2c The Firm's Short-Run Decision to Shut Down	285
14-2d Spilt Milk and Other Sunk Costs	286
Case Study: Near-Empty Restaurants and Off-Season Miniature Golf	287
14-2e The Firm's Long-Run Decision to Exit or Enter a Market	288
14-2f Measuring Profit in Our Graph for the Competitive Firm	288
14-3 The Supply Curve in a Competitive Market	289
14-3a The Short Run: Market Supply with a Fixed Number of Firms	290
14-3b The Long Run: Market Supply with Entry and Exit	290
14-3c Why Do Competitive Firms Stay in Business If They Make Zero Profit?	292
14-3d A Shift in Demand in the Short Run and Long Run	293
14-3e Why the Long-Run Supply Curve Might Slope Upward	293
14-4 Conclusion: Behind the Supply Curve	295
Summary	296
Key Concepts	296
Questions for Review	296
Quick Check Multiple Choice	296
Problems and Applications	297

CHAPTER 15

Monopoly 299

15-1 Why Monopolies Arise	300
15-1a Monopoly Resources	301
15-1b Government-Created Monopolies	301
15-1c Natural Monopolies	302
15-2 How Monopolies Make Production and Pricing Decisions	303
15-2a Monopoly versus Competition	303
15-2b A Monopoly's Revenue	304
15-2c Profit Maximization	306
15-2d A Monopoly's Profit	308
FYI: Why a Monopoly Does Not Have a Supply Curve	308
Case Study: Monopoly Drugs versus Generic Drugs	309
15-3 The Welfare Cost of Monopolies	310
15-3a The Deadweight Loss	311
15-3b The Monopoly's Profit: A Social Cost?	313

15-4 Price Discrimination 314

- 15-4a A Parable about Pricing 314
- 15-4b The Moral of the Story 315
- 15-4c The Analytics of Price Discrimination 315
- 15-4d Examples of Price Discrimination 317
- In The News:** Price Discrimination in Higher Education 318

15-5 Public Policy toward Monopolies 319

- 15-5a Increasing Competition with Antitrust Laws 319
- 15-5b Regulation 319
- 15-5c Public Ownership 321
- 15-5d Doing Nothing 321

15-6 Conclusion: The Prevalence of Monopolies 322

- Summary 323
- Key Concepts 323
- Questions for Review 323
- Quick Check Multiple Choice 324
- Problems and Applications 324

CHAPTER 16**Monopolistic Competition 329****16-1 Between Monopoly and Perfect Competition 330****16-2 Competition with Differentiated Products 332**

- 16-2a The Monopolistically Competitive Firm in the Short Run 332
- 16-2b The Long-Run Equilibrium 332
- 16-2c Monopolistic versus Perfect Competition 335
- 16-2d Monopolistic Competition and the Welfare of Society 336
- In The News:** Insufficient Variety as a Market Failure 338

16-3 Advertising 338

- 16-3a The Debate over Advertising 339
- Case Study:** Advertising and the Price of Eyeglasses 340
- 16-3b Advertising as a Signal of Quality 341
- 16-3c Brand Names 342

16-4 Conclusion 343

- Summary 344
- Key Concepts 344
- Questions for Review 345
- Quick Check Multiple Choice 345
- Problems and Applications 345

CHAPTER 17**Oligopoly 347****17-1 Markets with Only a Few Sellers 348**

- 17-1a A Duopoly Example 348
- 17-1b Competition, Monopolies, and Cartels 349
- In The News:** Public Price Fixing 350
- 17-1c The Equilibrium for an Oligopoly 351
- 17-1d How the Size of an Oligopoly Affects the Market Outcome 352

17-2 The Economics of Cooperation 353

- 17-2a The Prisoners' Dilemma 353
- 17-2b Oligopolies as a Prisoners' Dilemma 355

- Case Study:** OPEC and the World Oil Market 356
- 17-2c Other Examples of the Prisoners' Dilemma 356
- 17-2d The Prisoners' Dilemma and the Welfare of Society 358
- 17-2e Why People Sometimes Cooperate 358
- Case Study:** The Prisoners' Dilemma Tournament 359

17-3 Public Policy toward Oligopolies 360

- 17-3a Restraint of Trade and the Antitrust Laws 360
- Case Study:** An Illegal Phone Call 361
- 17-3b Controversies over Antitrust Policy 361
- Case Study:** The Microsoft Case 363

17-4 Conclusion 364

- In The News:** Should the N.C.A.A. Be Taken to Court? 365

- Summary 366
- Key Concepts 366
- Questions for Review 366
- Quick Check Multiple Choice 366
- Problems and Applications 367

**Part VI The Economics of Labor Markets 371****CHAPTER 18****The Markets for the Factors of Production 373****18-1 The Demand for Labor 374**

- 18-1a The Competitive Profit-Maximizing Firm 375
- 18-1b The Production Function and the Marginal Product of Labor 375
- 18-1c The Value of the Marginal Product and the Demand for Labor 377
- 18-1d What Causes the Labor-Demand Curve to Shift? 378
- FYI:** Input Demand and Output Supply: Two Sides of the Same Coin 379

18-2 The Supply of Labor 380

- 18-2a The Trade-off between Work and Leisure 380
- 18-2b What Causes the Labor-Supply Curve to Shift? 380

18-3 Equilibrium in the Labor Market	381
18-3a Shifts in Labor Supply	381
18-3b Shifts in Labor Demand	383
In The News: The Economics of Immigration	384
Case Study: Productivity and Wages	384
FYI: Monopsony	386
18-4 The Other Factors of Production: Land and Capital	386
18-4a Equilibrium in the Markets for Land and Capital	387
FYI: What Is Capital Income?	388
18-4b Linkages among the Factors of Production	388
Case Study: The Economics of the Black Death	389
18-5 Conclusion	390
Summary	390
Key Concepts	390
Questions for Review	391
Quick Check Multiple Choice	391
Problems and Applications	391

CHAPTER 19

Earnings and Discrimination 395

19-1 Some Determinants of Equilibrium Wages	396
19-1a Compensating Differentials	396
19-1b Human Capital	396
Case Study: The Increasing Value of Skills	397
In The News: Higher Education as an Investment	398
19-1c Ability, Effort, and Chance	399
Case Study: The Benefits of Beauty	400
19-1d An Alternative View of Education: Signaling	401
19-1e The Superstar Phenomenon	402
19-1f Above-Equilibrium Wages: Minimum-Wage Laws, Unions, and Efficiency Wages	402
19-2 The Economics of Discrimination	403
19-2a Measuring Labor-Market Discrimination	403
Case Study: Is Emily More Employable than Lakisha?	405
19-2b Discrimination by Employers	405
Case Study: Segregated Streetcars and the Profit Motive	406
19-2c Discrimination by Customers and Governments	406
Case Study: Discrimination in Sports	407
In The News: Gender Differences	408
19-3 Conclusion	408
Summary	409
Key Concepts	410
Questions for Review	410
Quick Check Multiple Choice	410
Problems and Applications	411

CHAPTER 20

Income Inequality and Poverty 413

20-1 The Measurement of Inequality	414
20-1a U.S. Income Inequality	414
20-1b Inequality around the World	416
20-1c The Poverty Rate	417

20-1d Problems in Measuring Inequality	418
Case Study: Alternative Measures of Inequality	420
20-1e Economic Mobility	420

20-2 The Political Philosophy of Redistributing Income 421

20-2a Utilitarianism	421
20-2b Liberalism	422
20-2c Libertarianism	423

20-3 Policies to Reduce Poverty 424

20-3a Minimum-Wage Laws	424
20-3b Welfare	425
20-3c Negative Income Tax	425
20-3d In-Kind Transfers	426
20-3e Antipoverty Programs and Work Incentives	427
In The News: International Differences in Income Redistribution	428

20-4 Conclusion 428

Summary	430
Key Concepts	430
Questions for Review	430
Quick Check Multiple Choice	430
Problems and Applications	431

Part VII Topics for Further Study 433

CHAPTER 21

The Theory of Consumer Choice 435

21-1 The Budget Constraint: What the Consumer Can Afford	436
21-2 Preferences: What the Consumer Wants	437
21-2a Representing Preferences with Indifference Curves	438
21-2b Four Properties of Indifference Curves	439
21-2c Two Extreme Examples of Indifference Curves	440

21-3 Optimization: What the Consumer Chooses	442
21-3a The Consumer's Optimal Choices	442
FYI: Utility: An Alternative Way to Describe Preferences and Optimization	443
21-3b How Changes in Income Affect the Consumer's Choices	444
21-3c How Changes in Prices Affect the Consumer's Choices	445
21-3d Income and Substitution Effects	446
21-3e Deriving the Demand Curve	448
21-4 Three Applications	449
21-4a Do All Demand Curves Slope Downward?	449
Case Study: The Search for Giffen Goods	450
21-4b How Do Wages Affect Labor Supply?	450
Case Study: Income Effects on Labor Supply: Historical Trends, Lottery Winners, and the Carnegie Conjecture	453
21-4c How Do Interest Rates Affect Household Saving?	454
21-5 Conclusion: Do People Really Think This Way?	456
Summary	457
Key Concepts	457
Questions for Review	457
Quick Check Multiple Choice	458
Problems and Applications	458

CHAPTER 22

Frontiers of Microeconomics 461

22-1 Asymmetric Information	462
22-1a Hidden Actions: Principals, Agents, and Moral Hazard	462
FYI: Corporate Management	463
22-1b Hidden Characteristics: Adverse Selection and the Lemons Problem	464
22-1c Signaling to Convey Private Information	465
Case Study: Gifts as Signals	465
22-1d Screening to Uncover Private Information	466
22-1e Asymmetric Information and Public Policy	466
22-2 Political Economy	467
22-2a The Condorcet Voting Paradox	467
22-2b Arrow's Impossibility Theorem	468
22-2c The Median Voter Is King	469
22-2d Politicians Are People Too	471
22-3 Behavioral Economics	471
22-3a People Aren't Always Rational	471
Case Study: Left-Digit Bias	473
22-3b People Care about Fairness	474
22-3c People Are Inconsistent over Time	475
In The News: Can Brain Science Improve Economics?	476
22-4 Conclusion	476
Summary	478
Key Concepts	478
Questions for Review	478
Quick Check Multiple Choice	478
Problems and Applications	479

Part VIII The Data of Macroeconomics 481

CHAPTER 23

Measuring a Nation's Income 483

23-1 The Economy's Income and Expenditure	484
23-2 The Measurement of GDP	486
23-2a "GDP Is the Market Value . . ."	486
23-2b ". . . of All . . ."	486
23-2c ". . . Final . . ."	487
23-2d ". . . Goods and Services . . ."	487
23-2e ". . . Produced . . ."	487
23-2f ". . . Within a Country . . ."	487
23-2g ". . . In a Given Period of Time."	487
23-3 The Components of GDP	488

PART
I

Introduction

CHAPTER 1

Ten Principles of Economics

The word *economy* comes from the Greek word *oikonomos*, which means “one who manages a household.” At first, this origin might seem peculiar. But in fact, households and economies have much in common.

A household faces many decisions. It must decide which household members do which tasks and what each member receives in return: Who cooks dinner? Who does the laundry? Who gets the extra dessert at dinner? Who gets to drive the car? In short, a household must allocate its scarce resources (time, dessert, car mileage) among its various members, taking into account each member’s abilities, efforts, and desires.

Like a household, a society faces many decisions. It must find some way to decide what jobs will be done and who will do them. It needs some people to grow food, other people to make clothing, and still others to design computer software. Once society has allocated people (as well as land, buildings, and machines) to various jobs, it must also allocate the goods and services

they produce. It must decide who will eat caviar and who will eat potatoes. It must decide who will drive a Ferrari and who will take the bus.

The management of society's resources is important because resources are scarce. **Scarcity** means that society has limited resources and therefore cannot produce all the goods and services people wish to have. Just as each member of a household cannot get everything she wants, each individual in a society cannot attain the highest standard of living to which she might aspire.

scarcity

the limited nature of society's resources

economics

the study of how society manages its scarce resources

Economics is the study of how society manages its scarce resources. In most societies, resources are allocated not by an all-powerful dictator but through the combined choices of millions of households and firms. Economists, therefore, study how people make decisions: how much they work, what they buy, how much they save, and how they invest their savings. Economists also study how people interact with one another. For instance, they examine how the multitude of buyers and sellers of a good together determine the price at which the good is sold and the quantity that is sold. Finally, economists analyze forces and trends that affect the economy as a whole, including the growth in average income, the fraction of the population that cannot find work, and the rate at which prices are rising.

The study of economics has many facets, but it is unified by several central ideas. In this chapter, we look at *Ten Principles of Economics*. Don't worry if you don't understand them all at first or if you aren't completely convinced. We explore these ideas more fully in later chapters. The ten principles are introduced here to give you an overview of what economics is all about. Consider this chapter a "preview of coming attractions."

1-1 How People Make Decisions

There is no mystery to what an economy is. Whether we are talking about the economy of Los Angeles, the United States, or the whole world, an economy is just a group of people dealing with one another as they go about their lives. Because the behavior of an economy reflects the behavior of the individuals who make up the economy, we begin our study of economics with four principles about individual decision making.

1-1a Principle 1: People Face Trade-offs

You may have heard the old saying, "There ain't no such thing as a free lunch." Grammar aside, there is much truth to this adage. To get something that we like, we usually have to give up something else that we also like. Making decisions requires trading off one goal against another.

Consider a student who must decide how to allocate her most valuable resource—her time. She can spend all of her time studying economics, spend all of it studying psychology, or divide it between the two fields. For every hour she studies one subject, she gives up an hour she could have used studying the other. And for every hour she spends studying, she gives up an hour that she could have spent napping, bike riding, watching TV, or working at her part-time job for some extra spending money.

Or consider parents deciding how to spend their family income. They can buy food, clothing, or a family vacation. Or they can save some of the family income for retirement or for children's college education. When they choose to spend an extra dollar on one of these goods, they have one less dollar to spend on some other good.

When people are grouped into societies, they face different kinds of trade-offs. One classic trade-off is between “guns and butter.” The more a society spends on national defense (guns) to protect its shores from foreign aggressors, the less it can spend on consumer goods (butter) to raise the standard of living at home. Also important in modern society is the trade-off between a clean environment and a high level of income. Laws that require firms to reduce pollution raise the cost of producing goods and services. Because of these higher costs, the firms end up earning smaller profits, paying lower wages, charging higher prices, or some combination of these three. Thus, while pollution regulations yield the benefit of a cleaner environment and the improved health that comes with it, the regulations come at the cost of reducing the incomes of the regulated firms’ owners, workers, and customers.

Another trade-off society faces is between efficiency and equality. **Efficiency** means that society is getting the maximum benefits from its scarce resources. **Equality** means that those benefits are distributed uniformly among society’s members. In other words, efficiency refers to the size of the economic pie, and equality refers to how the pie is divided into individual slices.

When government policies are designed, these two goals often conflict. Consider, for instance, policies aimed at equalizing the distribution of economic well-being. Some of these policies, such as the welfare system or unemployment insurance, try to help the members of society who are most in need. Others, such as the individual income tax, ask the financially successful to contribute more than others to support the government. Though they achieve greater equality, these policies reduce efficiency. When the government redistributes income from the rich to the poor, it reduces the reward for working hard; as a result, people work less and produce fewer goods and services. In other words, when the government tries to cut the economic pie into more equal slices, the pie gets smaller.

Recognizing that people face trade-offs does not by itself tell us what decisions they will or should make. A student should not abandon the study of psychology just because doing so would increase the time available for the study of economics. Society should not stop protecting the environment just because environmental regulations reduce our material standard of living. The poor should not be ignored just because helping them distorts work incentives. Nonetheless, people are likely to make good decisions only if they understand the options that are available to them. Our study of economics, therefore, starts by acknowledging life’s trade-offs.

1-1b Principle 2: The Cost of Something Is What You Give Up to Get It

Because people face trade-offs, making decisions requires comparing the costs and benefits of alternative courses of action. In many cases, however, the cost of an action is not as obvious as it might first appear.

Consider the decision to go to college. The main benefits are intellectual enrichment and a lifetime of better job opportunities. But what are the costs? To answer this question, you might be tempted to add up the money you spend on tuition, books, room, and board. Yet this total does not truly represent what you give up to spend a year in college.

There are two problems with this calculation. First, it includes some things that are not really costs of going to college. Even if you quit school, you need a place to sleep and food to eat. Room and board are costs of going to college only to the extent that they are more expensive at college than elsewhere. Second, this

efficiency

the property of society getting the most it can from its scarce resources

equality

the property of distributing economic prosperity uniformly among the members of society

calculation ignores the largest cost of going to college—your time. When you spend a year listening to lectures, reading textbooks, and writing papers, you cannot spend that time working at a job. For most students, the earnings they give up to attend school are the single largest cost of their education.

opportunity cost
whatever must be given up to obtain some item

The **opportunity cost** of an item is what you give up to get that item. When making any decision, decision makers should be aware of the opportunity costs that accompany each possible action. In fact, they usually are. College athletes who can earn millions if they drop out of school and play professional sports are well aware that the opportunity cost of their attending college is very high. It is not surprising that they often decide that the benefit of a college education is not worth the cost.

1-1c Principle 3: Rational People Think at the Margin

rational people
people who systematically and purposefully do the best they can to achieve their objectives

Economists normally assume that people are rational. **Rational people** systematically and purposefully do the best they can to achieve their objectives, given the available opportunities. As you study economics, you will encounter firms that decide how many workers to hire and how much of their product to manufacture and sell to maximize profits. You will also encounter individuals who decide how much time to spend working and what goods and services to buy with the resulting income to achieve the highest possible level of satisfaction.

Rational people know that decisions in life are rarely black and white but usually involve shades of gray. At dinnertime, the question you face is not “Should I fast or eat like a pig?” More likely, you will be asking yourself “Should I take that extra spoonful of mashed potatoes?” When exams roll around, your decision is not between blowing them off and studying twenty-four hours a day but whether to spend an extra hour reviewing your notes instead of watching TV. Economists use the term **marginal change** to describe a small incremental adjustment to an existing plan of action. Keep in mind that *margin* means “edge,” so marginal changes are adjustments around the edges of what you are doing. Rational people often make decisions by comparing *marginal benefits* and *marginal costs*.

marginal change
a small incremental adjustment to a plan of action

For example, suppose you are considering calling a friend on your cell phone. You decide that talking with her for 10 minutes would give you a benefit that you value at about \$7. Your cell phone service costs you \$40 per month plus \$0.50 per minute for whatever calls you make. You usually talk for 100 minutes a month, so your total monthly bill is \$90 (\$0.50 per minute times 100 minutes, plus the \$40 fixed fee). Under these circumstances, should you make the call? You might be tempted to reason as follows: “Because I pay \$90 for 100 minutes of calling each month, the average minute on the phone costs me \$0.90. So a 10-minute call costs \$9. Because that \$9 cost is greater than the \$7 benefit, I am going to skip the call.” That conclusion is wrong, however. Although the *average* cost of a 10-minute call is \$9, the *marginal cost*—the amount your bill increases if you make the extra call—is only \$5. You will make the right decision only by comparing the marginal benefit and the marginal cost. Because the marginal benefit of \$7 is greater than the marginal cost of \$5, you should make the call. This is a principle that people innately understand: Cell phone users with unlimited minutes (that is, minutes that are free at the margin) are often prone to make long and frivolous calls.

Thinking at the margin works for business decisions as well. Consider an airline deciding how much to charge passengers who fly standby. Suppose that flying a 200-seat plane across the United States costs the airline \$100,000. In this case, the average cost of each seat is \$100,000/200, which is \$500. One might be tempted

to conclude that the airline should never sell a ticket for less than \$500. But a rational airline can increase its profits by thinking at the margin. Imagine that a plane is about to take off with 10 empty seats and a standby passenger waiting at the gate is willing to pay \$300 for a seat. Should the airline sell the ticket? Of course, it should. If the plane has empty seats, the cost of adding one more passenger is tiny. The *average* cost of flying a passenger is \$500, but the *marginal* cost is merely the cost of the bag of peanuts and can of soda that the extra passenger will consume. As long as the standby passenger pays more than the marginal cost, selling the ticket is profitable.

Marginal decision making can help explain some otherwise puzzling economic phenomena. Here is a classic question: Why is water so cheap, while diamonds are so expensive? Humans need water to survive, while diamonds are unnecessary; but for some reason, people are willing to pay much more for a diamond than for a cup of water. The reason is that a person's willingness to pay for a good is based on the marginal benefit that an extra unit of the good would yield. The marginal benefit, in turn, depends on how many units a person already has. Water is essential, but the marginal benefit of an extra cup is small because water is plentiful. By contrast, no one needs diamonds to survive, but because diamonds are so rare, people consider the marginal benefit of an extra diamond to be large.

A rational decision maker takes an action if and only if the marginal benefit of the action exceeds the marginal cost. This principle explains why people use their cell phones as much as they do, why airlines are willing to sell tickets below average cost, and why people are willing to pay more for diamonds than for water. It can take some time to get used to the logic of marginal thinking, but the study of economics will give you ample opportunity to practice.

1-1d Principle 4: People Respond to Incentives

An **incentive** is something (such as a prospect of a punishment or reward) that induces a person to act. Because rational people make decisions by comparing costs and benefits, they respond to incentives. You will see that incentives play a central role in the study of economics. One economist went so far as to suggest that the entire field could be summarized as simply "People respond to incentives. The rest is commentary."

Incentives are crucial to analyzing how markets work. For example, when the price of an apple rises, people decide to eat fewer apples. At the same time, apple orchards decide to hire more workers and harvest more apples. In other words, a higher price in a market provides an incentive for buyers to consume less and an incentive for sellers to produce more. As we will see, the influence of prices on the behavior of consumers and producers is crucial for how a market economy allocates scarce resources.

Public policymakers should never forget about incentives: Many policies change the costs or benefits that people face and, as a result, alter their behavior. A tax on gasoline, for instance, encourages people to drive smaller, more fuel-efficient cars. That is one reason people drive smaller cars in Europe, where gasoline taxes are high, than in the United States, where gasoline taxes are low. A higher gasoline tax also encourages people to carpool, take public transportation, and live closer to where they work. If the tax were larger, more people would be driving hybrid cars, and if it were large enough, they would switch to electric cars.

When policymakers fail to consider how their policies affect incentives, they often end up with unintended consequences. For example, consider public policy regarding auto safety. Today, all cars have seat belts, but this was not true fifty

"Is the marginal benefit of this call greater than the marginal cost?"

incentive

something that induces a person to act

years ago. In the 1960s, Ralph Nader's book *Unsafe at Any Speed* generated much public concern over auto safety. Congress responded with laws requiring seat belts as standard equipment on new cars.

How does a seat belt law affect auto safety? The direct effect is obvious: When a person wears a seat belt, the probability of surviving an auto accident rises. But that's not the end of the story because the law also affects behavior by altering incentives. The relevant behavior here is the speed and care with which drivers operate their cars. Driving slowly and carefully is costly because it uses the driver's time and energy. When deciding how safely to drive, rational people compare, perhaps unconsciously, the marginal benefit from safer driving to the marginal cost. As a result, they drive more slowly and carefully when the benefit of increased safety is high. For example, when road conditions are icy, people drive more attentively and at lower speeds than they do when road conditions are clear.

Consider how a seat belt law alters a driver's cost-benefit calculation. Seat belts make accidents less costly because they reduce the likelihood of injury or death. In other words, seat belts reduce the benefits of slow and careful driving. People respond to seat belts as they would to an improvement in road conditions—by driving faster and less carefully. The result of a seat belt law, therefore, is a larger number of accidents. The decline in safe driving has a clear, adverse impact on pedestrians, who are more likely to find themselves in an accident but (unlike the drivers) don't have the benefit of added protection.

At first, this discussion of incentives and seat belts might seem like idle speculation. Yet in a classic 1975 study, economist Sam Peltzman argued that auto-safety laws have had many of these effects. According to Peltzman's evidence, these laws produce both fewer deaths per accident and more accidents. He concluded that the net result is little change in the number of driver deaths and an increase in the number of pedestrian deaths.

Peltzman's analysis of auto safety is an offbeat and controversial example of the general principle that people respond to incentives. When analyzing any policy, we must consider not only the direct effects but also the less obvious indirect effects that work through incentives. If the policy changes incentives, it will cause people to alter their behavior.

case study

The Incentive Effects of Gasoline Prices

From 2005 to 2008 the price of oil in world oil markets skyrocketed, the result of limited supplies together with surging demand from robust world growth, especially in China. The price of gasoline in the United States rose from about \$2 to about \$4 a gallon. At the time, the news was filled with stories about how people responded to the increased incentive to conserve—sometimes in obvious ways, sometimes in less obvious ways.

Here is a sampling of various stories:

- “As Gas Prices Soar, Buyers Are Flocking to Small Cars”
- “As Gas Prices Climb, So Do Scooter Sales”
- “Gas Prices Knock Bicycles Sales, Repairs into Higher Gear”
- “Gas Prices Send Surge of Riders to Mass Transit”
- “Camel Demand Up as Oil Price Soars”: Farmers in the Indian state of Rajasthan are rediscovering the humble camel. As the cost of running gas-guzzling tractors soars, even-toed ungulates are making a comeback.
- “The Airlines Are Suffering, but the Order Books of Boeing and Airbus Are Bulging”: Demand for new, more fuel-efficient aircraft has never been greater.

The latest versions of the Airbus A320 and Boeing 737, the single-aisle workhorses for which demand is strongest, are up to 40 percent cheaper to run than the vintage planes some American airlines still use.

- “Home Buying Practices Adjust to High Gas Prices”: In his hunt for a new home, Demetrius Stroud crunched the numbers to find out that, with gas prices climbing, moving near an Amtrak station is the best thing for his wallet.
- “Gas Prices Drive Students to Online Courses”: For Christy LaBadie, a sophomore at Northampton Community College, the 30-minute drive from her home to the Bethlehem, Pa., campus has become a financial hardship now that gasoline prices have soared to more than \$4 a gallon. So this semester she decided to take an online course to save herself the trip—and the money.
- “Diddy Halts Private Jet Flights Over Fuel Prices”: Fuel prices have grounded an unexpected frequent-flyer: Sean “Diddy” Combs. . . . The hip-hop mogul said he is now flying on commercial airlines instead of in private jets, which Combs said had previously cost him \$200,000 and up for a roundtrip between New York and Los Angeles. “I’m actually flying commercial,” Diddy said before walking onto an airplane, sitting in a first-class seat and flashing his boarding pass to the camera. “That’s how high gas prices are.”

Many of these developments proved transitory. The economic downturn that began in 2008 and continued into 2009 reduced the world demand for oil, and the price of gasoline declined substantially. No word yet on whether Mr. Combs has returned to his private jet. ▲

Quick Quiz Describe an important trade-off you recently faced. • Give an example of some action that has both a monetary and nonmonetary opportunity cost. • Describe an incentive your parents offered to you in an effort to influence your behavior.

1-2 How People Interact

The first four principles discussed how individuals make decisions. As we go about our lives, many of our decisions affect not only ourselves but other people as well. The next three principles concern how people interact with one another.

1-2a Principle 5: Trade Can Make Everyone Better Off

You may have heard on the news that the Chinese are our competitors in the world economy. In some ways, this is true because American and Chinese firms produce many of the same goods. Companies in the United States and China compete for the same customers in the markets for clothing, toys, solar panels, automobile tires, and many other items.

Yet it is easy to be misled when thinking about competition among countries. Trade between the United States and China is not like a sports contest in which one side wins and the other side loses. In fact, the opposite is true: Trade between two countries can make each country better off.

To see why, consider how trade affects your family. When a member of your family looks for a job, she competes against members of other families who are looking for jobs. Families also compete against one another when they go shopping because each family wants to buy the best goods at the lowest prices. In a sense, each family in an economy competes with all other families.
