ABOUT THE AUTHORS

Glenn Hubbard, policymaker, professor, and researcher.

R. Glenn Hubbard is the dean and Russell L. Carson Professor of Finance and Economics in the Graduate School of Business at Columbia University and professor of economics in Columbia's Faculty of Arts and Sciences. He is also a research associate of the National Bureau of Economic Research and a director of Automatic Data Processing, Black Rock Closed-End Funds, and MetLife. He received a PhD in economics from Harvard University in 1983. From 2001 to 2003, he served as chair of the White House Council of Economic Advisers and chair of the

OECD Economic Policy Committee, and from 1991 to 1993, he was deputy assistant secretary of the U.S. Treasury Department. He currently serves as co-chair of the nonpartisan Committee on Capital Markets Regulation. Hubbard's fields of specialization are public economics, financial markets and institutions, corporate finance, macroeconomics, industrial organization, and public policy. He is the author of more than 100 articles in leading journals, including *American Economic Review*, *Brookings Papers on Economic Activity*, *Journal of Finance*, *Journal of Financial Economics*, *Journal of Money, Credit, and Banking*, *Journal of Political Economy*, *Journal of Public Economics*, *Quarterly Journal of Economics*, *RAND Journal of Economics*, and *Review of Economics and Statistics*. His research has been supported by grants from the National Science Foundation, the National Bureau of Economic Research, and numerous private foundations.

Tony O'Brien, award-winning professor and researcher.

Anthony Patrick O'Brien is a professor of economics at Lehigh University. He received a PhD from the University of California, Berkeley, in 1987. He has taught principles of economics for more than 20 years, in both large sections and small honors classes. He received the Lehigh University Award for Distinguished Teaching. He was formerly the director of the Diamond Center for Economic Education and was named a Dana Foundation Faculty Fellow and Lehigh Class of 1961 Professor of Economics. He has been a visiting professor at the University of

California, Santa Barbara, and the Graduate School of Industrial Administration at Carnegie Mellon University. O'Brien's research has dealt with issues such as the evolution of the U.S. automobile industry, the sources of U.S. economic competitiveness, the development of U.S. trade policy, the causes of the Great Depression, and the causes of black–white income differences. His research has been published in leading journals, including *American Economic Review*, *Quarterly Journal of Economics*, *Journal of Money, Credit, and Banking*, *Industrial Relations*, *Journal of Economic History*, and *Explorations in Economic History*. His research has been supported by grants from government agencies and private foundations.

BRIEF CONTENTS

Preface	P-1
A Word of Thanks	P-25

PART 1 Introduction

Chapter 1: Economics: Foundations and Models	2
Appendix: Using Graphs and Formulas	28
Chapter 2: Trade-offs, Comparative Advantage, and the Market System	40
Chapter 3: Where Prices Come From: The Interaction of Demand and Supply	72
Chapter 4: Economic Efficiency, Government Price Setting, and Taxes	108
Appendix: Quantitative Demand and Supply Analysis	141
Chapter 5: The Economics of Health Care	146

PART 2 Firms in the Domestic and International Economies

Chapter 6: Firms, the Stock Market, and Corporate Governance	180
Appendix: Tools to Analyze Firms' Financial Information	206
Chapter 7: Comparative Advantage and the Gains from International Trade	216

PART 3 Macroeconomic Foundations and Long-Run Growth

Chapter 8: GDP: Measuring Total Production and Income	252
Chapter 9: Unemployment and Inflation	278
Chapter 10: Economic Growth, the Financial System, and Business Cycles	318
Chapter 11: Long-Run Economic Growth: Sources and Policies	352

PART 4 Short-Run Fluctuations

Chapter 12: Aggregate Expenditure and Output in the Short Run	392
Appendix: The Algebra of Macroeconomic Equilibrium	434
Chapter 13: Aggregate Demand and Aggregate Supply Analysis	436
Appendix: Macroeconomic Schools of Thought	474

PART 5 Monetary and Fiscal Policy

Chapter 14: Money, Banks, and the Federal Reserve System	478
Chapter 15: Monetary Policy	516
Chapter 16: Fiscal Policy	560
Appendix: A Closer Look at the Multiplier	605
Chapter 17: Inflation, Unemployment, and Federal Reserve Policy	610

PART 6 The International Economy

Chapter 18: Macroeconomics in an Open Economy	644
Chapter 19: The International Financial System	674
Appendix: The Gold Standard and the Bretton Woods System	697

CONTENTS

Preface	P-1		
A Word of Thanks	P-25		
PART 1 Introduction			
CHAPTER 1: Economics: Foundations and Models	2		
Why Does Ford Assemble Cars in Both the United States and Mexico?	2		
1.1 Three Key Economic Ideas	4		
People Are Rational	5		
People Respond to Economic Incentives	5		
Apply the Concept: Does Health Insurance Give People an Incentive to Become Obese?	5		
Optimal Decisions Are Made at the Margin	7		
Solved Problem 1.1: The Marginal Benefit and Marginal Cost of Speed Limits	7		
1.2 The Economic Problem That Every Society Must Solve	8		
What Goods and Services Will Be Produced?	9		
How Will the Goods and Services Be Produced?	9		
Who Will Receive the Goods and Services Produced?	9		
Centrally Planned Economies versus Market Economies	10		
The Modern “Mixed” Economy	10		
Efficiency and Equity	11		
1.3 Economic Models	12		
The Role of Assumptions in Economic Models	12		
Forming and Testing Hypotheses in Economic Models	13		
Positive and Normative Analysis	14		
Don’t Let This Happen to You: Don’t Confuse Positive Analysis with Normative Analysis	14		
Economics as a Social Science	15		
Apply the Concept: What Can Economics Contribute to the Debate over Tariffs?	15		
1.4 Microeconomics and Macroeconomics	16		
1.5 Economic Skills and Economics as a Career	16		
1.6 A Preview of Important Economic Terms	17		
Conclusion	19		
An Inside Look: Is Manufacturing Returning to the United States?	20		
*Chapter Summary and Problems	22		
Key Terms, Summary, Review Questions, Problems and Applications, and Critical Thinking Exercises			
Appendix: Using Graphs and Formulas	28		
Graphs of One Variable	29		
		Graphs of Two Variables	30
		Slopes of Lines	31
		Taking into Account More Than Two Variables on a Graph	32
		Positive and Negative Relationships	32
		Determining Cause and Effect	34
		Are Graphs of Economic Relationships Always Straight Lines?	35
		Slopes of Nonlinear Curves	35
		Formulas	36
		Formula for a Percentage Change	37
		Formulas for the Areas of a Rectangle and a Triangle	37
		Summary of Using Formulas	38
		Problems and Applications	38
		CHAPTER 2: Trade-offs, Comparative Advantage, and the Market System	40
		Managers at Tesla Motors Face Trade-offs	40
		2.1 Production Possibilities Frontiers and Opportunity Costs	42
		Graphing the Production Possibilities Frontier	42
		Solved Problem 2.1: Drawing a Production Possibilities Frontier for Tesla Motors	44
		Increasing Marginal Opportunity Costs	46
		Economic Growth	47
		2.2 Comparative Advantage and Trade	48
		Specialization and Gains from Trade	48
		Absolute Advantage versus Comparative Advantage	50
		Comparative Advantage and the Gains from Trade	51
		Don’t Let This Happen to You: Don’t Confuse Absolute Advantage and Comparative Advantage	51
		Solved Problem 2.2: Comparative Advantage and the Gains from Trade	52
		Apply the Concept: Comparative Advantage, Opportunity Cost, and Housework	53
		2.3 The Market System	54
		The Circular Flow of Income	55
		The Gains from Free Markets	56
		The Market Mechanism	56
		Apply the Concept: A Story of the Market System in Action: How Do You Make an iPad?	57
		The Role of the Entrepreneur in the Market System	59
		The Legal Basis of a Successful Market System	59
		Apply the Concept: Managers at Feeding America Use the Market Mechanism to Reduce Hunger	62

* These end-of-chapter resource materials repeat in all chapters. Select chapters also include Real-Time Data Exercises. Students can complete all questions, problems, and exercises in MyLab Economics.

Conclusion	63	CHAPTER 4: Economic Efficiency, Government Price Setting, and Taxes	108
An Inside Look: Tesla Bets Big on Nevada Battery Plant	64	What Do Food Riots in Venezuela and the Rise of Uber in the United States Have in Common?	108
Chapter Summary and Problems	66	4.1 Consumer Surplus and Producer Surplus	110
CHAPTER 3: Where Prices Come From: The Interaction of Demand and Supply	72	Consumer Surplus	110
How Smart Is Your Water?	72	Apply the Concept: The Consumer Surplus from Uber	112
3.1 The Demand Side of the Market	74	Producer Surplus	114
Demand Schedules and Demand Curves	74	What Consumer Surplus and Producer Surplus Measure	115
The Law of Demand	75	4.2 The Efficiency of Competitive Markets	115
What Explains the Law of Demand?	75	Marginal Benefit Equals Marginal Cost in Competitive Equilibrium	115
Holding Everything Else Constant: The <i>Ceteris Paribus</i> Condition	76	Economic Surplus	116
Variables That Shift Market Demand	76	Deadweight Loss	117
Apply the Concept: Virtual Reality Headsets: Will a Substitute Fail for a Lack of Complements?	77	Economic Surplus and Economic Efficiency	117
Apply the Concept: Millennials Shake Up the Markets for Soda, Groceries, Big Macs, and Running Shoes	78	4.3 Government Intervention in the Market: Price Floors and Price Ceilings	118
A Change in Demand versus a Change in Quantity Demanded	81	Price Floors: Government Policy in Agricultural Markets	118
Apply the Concept: Forecasting the Demand for Premium Bottled Water	81	Apply the Concept: Price Floors in Labor Markets: The Debate over Minimum Wage Policy	119
3.2 The Supply Side of the Market	82	Price Ceilings: Government Rent Control Policy in Housing Markets	121
Supply Schedules and Supply Curves	83	Don't Let This Happen to You: Don't Confuse "Scarcity" with "Shortage"	122
The Law of Supply	83	Black Markets and Peer-to-Peer Sites	122
Variables That Shift Market Supply	83	Solved Problem 4.3: What's the Economic Effect of a Black Market in Renting Apartments?	123
A Change in Supply versus a Change in Quantity Supplied	86	The Results of Government Price Controls: Winners, Losers, and Inefficiency	124
3.3 Market Equilibrium: Putting Demand and Supply Together	86	Apply the Concept: Price Controls Lead to Economic Decline in Venezuela	124
How Markets Eliminate Surpluses and Shortages	87	Positive and Normative Analysis of Price Ceilings and Price Floors	126
Demand and Supply Both Count	88	4.4 The Economic Effect of Taxes	126
Solved Problem 3.3: Demand and Supply Both Count: A Tale of Two Letters	88	The Effect of Taxes on Economic Efficiency	126
3.4 The Effect of Demand and Supply Shifts on Equilibrium	90	Tax Incidence: Who Actually Pays a Tax?	127
The Effect of Shifts in Demand on Equilibrium	90	Solved Problem 4.4: When Do Consumers Pay All of a Sales Tax Increase?	128
The Effect of Shifts in Supply on Equilibrium	90	Apply the Concept: Is the Burden of the Social Security Tax Really Shared Equally between Workers and Firms?	130
The Effect of Shifts in Demand and Supply over Time	90	Conclusion	131
Apply the Concept: Lower Demand for Orange Juice—But Higher Prices?	92	An Inside Look: Will Uber Be Required to Pay British VAT?	132
Solved Problem 3.4: Can We Predict Changes in the Price and Quantity of Organic Corn?	94	Chapter Summary and Problems	134
Shifts in a Curve versus Movements along a Curve	95	Appendix: Quantitative Demand and Supply Analysis	141
Don't Let This Happen to You: Remember: A Change in a Good's Price Does <i>Not</i> Cause the Demand or Supply Curve to Shift	96	Demand and Supply Equations	141
Conclusion	97	Calculating Consumer Surplus and Producer Surplus	142
An Inside Look: McDonald's Looks for New Ways to Attract Customers	98	Review Questions	144
Chapter Summary and Problems	100	Problems and Applications	144

CHAPTER 5: The Economics of Health Care	146	Apply the Concept: Why Are Fewer Young People Starting Businesses?	184
Where Will You Find Health Insurance?	146	The Structure of Corporations and the Principal–Agent Problem	185
5.1 The Improving Health of People in the United States	148	6.2 How Firms Raise Funds	186
Changes over Time in U.S. Health	149	Sources of External Funds	186
Reasons for Long-Run Improvements in U.S. Health	149	Apply the Concept: The Rating Game: Are the Federal Government or State Governments Likely to Default on Their Bonds?	187
5.2 Health Care around the World	150	Stock and Bond Markets Provide Capital—and Information	189
The U.S. Health Care System	150	The Fluctuating Stock Market	190
Apply the Concept: The Increasing Importance of Health Care in the U.S. Economy	152	Don't Let This Happen to You: When Snap Shares Are Sold, Snap Doesn't Get the Money	190
The Health Care Systems of Canada, Japan, and the United Kingdom	153	Apply the Concept: Why Are Many People Poor Stock Market Investors?	192
Comparing Health Care Outcomes around the World	154	Solved Problem 6.2: Why Does Warren Buffett Like Mutual Funds?	193
How Useful Are Cross-Country Comparisons of Health Outcomes?	155	6.3 Using Financial Statements to Evaluate a Corporation	194
5.3 Information Problems and Externalities in the Market for Health Care	156	The Income Statement	194
Adverse Selection and the Market for “Lemons”	156	The Balance Sheet	195
Asymmetric Information in the Market for Health Insurance	157	6.4 Recent Issues in Corporate Governance Policy	196
Don't Let This Happen to You: Don't Confuse Adverse Selection with Moral Hazard	158	The Accounting Scandals of the Early 2000s	196
Externalities in the Market for Health Care	159	Corporate Governance and the Financial Crisis of 2007–2009	196
Should the Government Run the Health Care System?	161	Government Regulation in Response to the Financial Crisis	197
5.4 The Debate over Health Care Policy in the United States	162	Did Principal–Agent Problems Help Cause the 2007–2009 Financial Crisis?	197
The Rising Cost of Health Care	162	Apply the Concept: Should Investors Worry about Corporate Governance at Snapchat?	198
Apply the Concept: Are U.S. Firms Handicapped by Paying for Their Employees' Health Insurance?	164	Conclusion	200
Explaining Increases in Health Care Spending	165	Chapter Summary and Problems	201
The Continuing Debate over Health Care Policy	168	Appendix: Tools to Analyze Firms' Financial Information	206
Solved Problem 5.4: Recent Trends in U.S. Health Care	169	Using Present Value to Make Investment Decisions	206
Apply the Concept: How Much Is That MRI Scan?	171	Solved Problem 6A.1: How to Receive Your Contest Winnings	208
Conclusion	173	Using Present Value to Calculate Bond Prices	209
Chapter Summary and Problems	174	Using Present Value to Calculate Stock Prices	210
		A Simple Formula for Calculating Stock Prices	210
		Going Deeper into Financial Statements	211
		Analyzing Income Statements	212
		Analyzing Balance Sheets	212
		Review Questions	214
		Problems and Applications	214
		CHAPTER 7: Comparative Advantage and the Gains from International Trade	216
		President Trump, Oreo Cookies, and Free Trade	216
		7.1 The United States in the International Economy	218
		The Importance of Trade to the U.S. Economy	219
		U.S. International Trade in a World Context	220

PART 2 Firms in the Domestic and International Economies

CHAPTER 6: Firms, the Stock Market, and Corporate Governance	180
---------------------------------------------------------------------	-----

Is Snapchat the Next Facebook . . . or the Next Twitter?	180
-----------------------------------------------------------------	-----

6.1 Types of Firms	182
Who Is Liable? Limited and Unlimited Liability	182
Corporations Earn the Majority of Revenue and Profits	183

7.2 Comparative Advantage in International Trade 220
 A Brief Review of Comparative Advantage 221
 Comparative Advantage and Absolute Advantage 221

7.3 How Countries Gain from International Trade 222
 Increasing Consumption through Trade 222
Solved Problem 7.3: The Gains from Trade 224
 Why Don't We See Complete Specialization? 225
 Does Anyone Lose as a Result of International Trade? 226
Don't Let This Happen to You: Remember That Trade Creates Both Winners and Losers 226
Apply the Concept: Who Gains and Who Loses from U.S. Trade with China? 226
 Where Does Comparative Advantage Come From? 229

7.4 Government Policies That Restrict International Trade 230
 Tariffs 231
 Quotas and Voluntary Export Restraints 232
 Measuring the Economic Effect of the Sugar Quota 232
Solved Problem 7.4: Measuring the Economic Effect of a Quota 234
 The High Cost of Preserving Jobs with Tariffs and Quotas 235
Apply the Concept: Smoot-Hawley, the Politics of Tariffs, and the Cost of Protecting a Vanishing Industry 235
 Gains from Unilateral Elimination of Tariffs and Quotas 237
 Other Barriers to Trade 237

7.5 The Debate over Trade Policies and Globalization 237
 Why Do Some People Oppose the World Trade Organization? 237
Apply the Concept: Protecting Consumer Health or Protecting U.S. Firms from Competition? 240
 Dumping 241
 Positive versus Normative Analysis (Once Again) 241

Conclusion 242
Chapter Summary and Problems 243

PART 3 Macroeconomic Foundations and Long-Run Growth

CHAPTER 8: GDP: Measuring Total Production and Income 252

The Ford Motor Company Meets Macroeconomics 252

8.1 Gross Domestic Product Measures Total Production 255
 Measuring Total Production: Gross Domestic Product 255
Solved Problem 8.1: Calculating GDP 256
 Production, Income, and the Circular-Flow Diagram 256

Components of GDP 258
Don't Let This Happen to You: Remember What Economists Mean by *Investment* 259
 An Equation for GDP and Some Actual Values 259
Apply the Concept: Microsoft's Steve Ballmer Uses the U.S. Constitution to Reorganize Government Data 260
 Measuring GDP Using the Value-Added Method 262

8.2 Does GDP Measure What We Want It to Measure? 262
 Shortcomings in GDP as a Measure of Total Production 262
Apply the Concept: Why Do Many Developing Countries Have Such Large Underground Economies? 263
 Shortcomings of GDP as a Measure of Well-Being 264

8.3 Real GDP versus Nominal GDP 265
 Calculating Real GDP 265
Solved Problem 8.3: Calculating Real GDP 265
 Comparing Real GDP and Nominal GDP 266
 The GDP Deflator 267
Apply the Concept: Did the Standard of Living in Nigeria Almost Double Overnight? 268

8.4 Other Measures of Total Production and Total Income 269
 Gross National Product 269
 National Income 269
 Personal Income 270
 Disposable Personal Income 270
 The Division of Income 270

Conclusion 271
Chapter Summary and Problems 272

CHAPTER 9: Unemployment and Inflation 278

Why Would Boeing Cut Thousands of Jobs As the Economy Expands? 278

9.1 Measuring the Unemployment Rate, the Labor Force Participation Rate, and the Employment–Population Ratio 280
 The Household Survey 280
Solved Problem 9.1: What Happens if the BLS Includes the Military? 282
 Problems with Measuring the Unemployment Rate 283
 Trends in Labor Force Participation 284
 Unemployment Rates for Different Groups 285
 How Long Are People Typically Unemployed? 286
Apply the Concept: Eight Million Workers Are Missing! 286
 The Establishment Survey: Another Measure of Employment 288
 Revisions in the Establishment Survey 288
 Employment Data: How Bad Was the 2007–2009 Recession? 289
 Job Creation and Job Destruction over Time 289

9.2 Types of Unemployment	290	10.3 The Business Cycle	337
Frictional Unemployment and Job Search	290	Some Basic Business Cycle Definitions	337
Structural Unemployment	291	How Do We Know When the Economy Is in a Recession?	338
Cyclical Unemployment	291	What Happens during the Business Cycle?	339
Full Employment	292	Don't Let This Happen to You: Don't Confuse the Price Level and the Inflation Rate	341
Apply the Concept: How Should We Categorize the Unemployment Resulting from Boeing's Layoffs?	292	Will the U.S. Economy Return to Stability?	344
9.3 Explaining Unemployment	293	Conclusion	345
Government Policies and the Unemployment Rate	293	Chapter Summary and Problems	346
Labor Unions	294		
Efficiency Wages	295	CHAPTER 11: Long-Run Economic Growth: Sources and Policies	352
9.4 Measuring Inflation	295	What Explains Slow Growth in Mexico?	352
The Consumer Price Index	295	11.1 Economic Growth over Time and around the World	354
Is the CPI Accurate?	297	Economic Growth from 1,000,000 B.C.E. to the Present	354
Don't Let This Happen to You: Don't Miscalculate the Inflation Rate	297	Apply the Concept: Why Did the Industrial Revolution Begin in England?	355
The Producer Price Index	298	Small Differences in Growth Rates Are Important	356
9.5 Using Price Indexes to Adjust for the Effects of Inflation	298	Why Do Growth Rates Matter?	357
Solved Problem 9.5: What Has Been Happening to Real Wages in the United States?	299	Don't Let This Happen to You: Don't Confuse the Average Annual Percentage Change with the Total Percentage Change	357
9.6 Nominal Interest Rates versus Real Interest Rates	301	“The Rich Get Richer and ... ”	357
9.7 Does Inflation Impose Costs on the Economy?	302	Apply the Concept: Is Income All That Matters?	358
Inflation Affects the Distribution of Income	303	11.2 What Determines How Fast Economies Grow?	359
The Problem with Anticipated Inflation	303	The Per-Worker Production Function	360
The Problem with Unanticipated Inflation	304	Which Is More Important for Economic Growth: More Capital or Technological Change?	361
Apply the Concept: What's So Bad about Falling Prices?	304	Technological Change: The Key to Sustaining Economic Growth	361
Conclusion	306	Apply the Concept: What Explains the Economic Failure of the Soviet Union?	362
Chapter Summary and Problems	307	Solved Problem 11.2: Using the Economic Growth Model to Analyze the Failure of the Soviet Economy	363
		New Growth Theory	364
CHAPTER 10: Economic Growth, the Financial System, and Business Cycles	318	Joseph Schumpeter and Creative Destruction	366
Economic Growth and the Business Cycle at Chevron Corporation	318	11.3 Economic Growth in the United States	366
10.1 Long-Run Economic Growth	320	Economic Growth in the United States since 1950	366
Apply the Concept: The Connection between Economic Prosperity and Health	321	Is the United States Headed for a Long Period of Slow Growth?	367
Calculating Growth Rates and the Rule of 70	323	11.4 Why Isn't the Whole World Rich?	369
What Determines the Rate of Long-Run Growth?	324	Catch-up: Sometimes but Not Always	370
Solved Problem 10.1: Where Does Productivity Come From?	325	Solved Problem 11.4: The Economic Growth Model's Prediction of Catch-Up	372
Apply the Concept: Can India Sustain Its Rapid Growth?	326	Why Haven't Most Western European Countries, Canada, and Japan Caught Up to the United States?	373
Potential GDP	328	Why Don't More Low-Income Countries Experience Rapid Growth?	375
10.2 Saving, Investment, and the Financial System	329	Apply the Concept: Why Hasn't Mexico Grown as Fast as China?	376
An Overview of the Financial System	329	The Benefits of Globalization	378
The Macroeconomics of Saving and Investment	330		
The Market for Loanable Funds	332		
Apply the Concept: Ebenezer Scrooge: Accidental Promoter of Economic Growth?	333		
Solved Problem 10.2: Are Future Budget Deficits a Threat to the Economy?	335		

11.5 Growth Policies 379
 Enhancing Property Rights and the Rule of Law 379
Apply the Concept: Will China’s Standard of Living Ever Exceed That of the United States? 379
 Improving Health and Education 381
 Policies That Promote Technological Change 381
 Policies That Promote Saving and Investment 381
 Is Economic Growth Good or Bad? 382
Conclusion 383
Chapter Summary and Problems 384

PART 4 Short-Run Fluctuations

CHAPTER 12: Aggregate Expenditure and Output in the Short Run 392
Fluctuating Demand Helps—and Hurts—Intel and Other Firms 392
12.1 The Aggregate Expenditure Model 394
 Aggregate Expenditure 394
 The Difference between Planned Investment and Actual Investment 395
 Macroeconomic Equilibrium 395
 Adjustments to Macroeconomic Equilibrium 396
12.2 Determining the Level of Aggregate Expenditure in the Economy 397
 Consumption 397
 The Relationship between Consumption and National Income 400
 Income, Consumption, and Saving 402
Solved Problem 12.2: Calculating the Marginal Propensity to Consume and the Marginal Propensity to Save 403
 Planned Investment 404
Apply the Concept: Is Student Loan Debt Causing Fewer Young People to Buy Houses? 405
 Government Purchases 407
 Net Exports 408
Apply the Concept: The iPhone Is Made in China . . . or Is It? 410
12.3 Graphing Macroeconomic Equilibrium 410

PREFACE

Our approach in this new edition remains what it was in the first edition, published nearly 15 years ago: to provide students and instructors an economics text that delivers complete economics coverage with many real-world business examples. Our goal has been to teach economics in a “widget-free” way by using real-world business and policy examples. We are gratified by the enthusiastic response from students and instructors who have used the first six editions of this book and who have made it a best-selling economics textbook.

Much has happened in the U.S. and world economies since we prepared the previous edition, including the election of a U.S. president with a distinctive approach to economic policy. We have incorporated many of these developments in the new real-world examples and policy discussions in this edition and also in the digital resources.

New to This Edition

We are grateful to the many instructors and students who made suggestions for improvements in the previous edition. We have done our best to incorporate as many of those suggestions as possible. Here is an overview of the revisions, followed by a more detailed description.

Overview of Changes

- All the chapter openers feature either new companies or have updated information. Students can visit MyLab Economics to watch a brief video that summarizes the key points of each chapter opener.
- Chapters 1–4, include new *An Inside Look* features to help students apply economic thinking to current events and policy debates as they are presented in news articles. Additional news articles and analyses appear weekly on MyLab Economics.
- There are 12 new *Apply the Concept* features (formerly titled *Making the Connection*) to help students tie economic concepts to current events and policy issues. The *Apply the Concept* features that were retained from the previous edition are updated. Students can visit MyLab Economics to watch more than 60 videos in which we summarize the key points in each feature. Related assessment accompanies each video, so students can test their understanding before moving on to a new section of the chapter.
- There are 2 new *Solved Problems* and 10 heavily revised *Solved Problems*. This feature helps students break down and answer economic problems step by step. There are additional Interactive *Solved Problems* on MyLab Economics, where students can receive feedback and tutorial help.
- There is a new category of end-of-chapter material titled *Critical Thinking Exercises*. We were motivated to add this new category of exercises because many instructors have told us that students need help building skills in the following areas: (1) analyzing and interpreting information; (2) applying reasoning and logic to new or unfamiliar ideas and situations; (3) examining ideas and concepts from multiple perspectives; and (4) clearly communicating their findings in a brief paper or class presentation. Students can complete these exercises on MyLab Economics and receive feedback and tutorial help.
- All the figures and tables are updated with the latest data available. Video animations of all the numbered figures and select tables are located on MyLab Economics. Graded practice exercises are included with these animations.

- We have replaced or updated many of the end-of-chapter *Problems and Applications*. In most chapters, one or two problems include graphs or tables for students to analyze. Select chapters have a category titled *Real-Time Data Exercises*, and we updated some of these exercises. Students can complete these exercises on MyLab Economics and receive feedback and tutorial help.

New Content and Features by Chapter

Here is a description of key changes by chapter.

Chapter 1, “Economics: Foundations and Models,” opens with a new discussion of why Ford Motor Company manufactures cars in both the United States and Mexico. *An Inside Look* at the end of the chapter presents a news article and analysis of how likely it is that significant numbers of manufacturing jobs will return to the United States from overseas. New *Solved Problem 1.1* analyzes the marginal benefit and marginal cost of speed limits on highways. A new *Apply the Concept* examines why countries trade with each other and how economic concepts can help us evaluate policy debates about tariffs on imports. Taking a principles of economics class requires students to learn different terms, models, and a new way of analyzing real-world events. It can be challenging for students, especially non-majors, to appreciate how this course can help them in a career in business or government or in a nonprofit organization. We therefore decided to add to Chapter 1 a new section that describes economics as a career and highlights the key skills students of any major can gain from studying economics.

Chapter 2, “Trade-offs, Comparative Advantage, and the Market System,” opens with an updated discussion of the resource allocation decisions managers at Tesla Motors face. *An Inside Look* at the end of the chapter discusses Tesla’s decision to build a factory in Nevada to mass produce lithium-ion batteries for its electric cars. A new *Apply the Concept* illustrates how managers at the nonprofit organization Feeding America use the market mechanism to more efficiently allocate food based on the needs of food programs around the country.

Chapter 3, “Where Prices Come From: The Interaction of Demand and Supply,” opens with a new discussion of how Coca-Cola and Pepsi-Cola responded to a fall in demand for sodas by introducing premium bottled water, sometimes called smart water. We use the market for premium bottled water to develop the demand and supply model. *An Inside Look* at the end of the chapter examines how McDonald’s responded to shifts in consumer demand by serving breakfast all day and offering online ordering and home delivery. There are three new *Apply the Concepts*: “Virtual Reality Headsets: Will a Substitute Fail for a Lack of Complements?”; “Millennials Shake Up the Markets for Soda, Groceries, Big Macs, and Running Shoes”; and “Forecasting the Demand for Premium Bottled Water.”

Chapter 4, “Economic Efficiency, Government Price Setting, and Taxes,” opens with a new discussion about the economic link between food riots in Venezuela and the rise in popularity of Uber in the United States. At the end of the chapter, *An Inside Look* examines problems Uber has encountered in attempting to expand its services in the United Kingdom. There are two new *Apply the Concepts*: “The Consumer Surplus from Uber” and “Price Controls Lead to Economic Decline in Venezuela.”

Chapter 5, “The Economics of Health Care,” opens with a new discussion of how insurance companies are dealing with the effects of the Patient Protection and Affordable Care Act of 2010. There is also a discussion of the 2017 debate in Congress over whether that act should be extensively revised.

Chapter 6, “Firms, the Stock Market, and Corporate Governance,” opens with a new comparison of the initial public offerings of Snap, Twitter, and Facebook. A new *Apply the Concept* explores why investors are concerned about potential corporate governance issues at Snap and other social media firms.

Chapter 7, “Comparative Advantage and the Gains from International Trade,” opens with the decision by Mondelez to move production of Oreo cookies to Mexico to provide context for a new discussion of recent debates about the North American Free Trade Agreement (NAFTA) and the Trans-Pacific Partnership (TPP). A new *Apply the Concept* analyzes who gains and who loses from U.S. trade with China.

Chapter 8, “GDP: Measuring Total Production and Income,” opens with an updated discussion of how Ford and other car companies deal with the business cycle. A new *Apply the Concept* discusses an innovative Web site created by Steve Ballmer, former CEO of Microsoft, that uses the preamble to the U.S. Constitution as a framework for reorganizing macroeconomic data.

Chapter 9, “Unemployment and Inflation,” opens with a new discussion of Boeing’s decision in 2017 to lay off workers, despite a growing U.S. economy. The chapter includes an updated analysis of the reasons for the decline in labor force participation among prime-aged males. A new *Apply the Concept* discusses how to characterize the unemployment resulting from Boeing’s layoffs.

Chapter 10, “Economic Growth, the Financial System, and Business Cycles,” opens with a new discussion of whether peak oil demand threatens the long-run growth of Chevron Corporation.

Chapter 11, “Long-Run Economic Growth: Sources and Policies,” begins with a new opener that uses Wisconsin-based Rexnord Corporation’s decision to relocate some production to Mexico to frame the discussion of whether that country is capable of increasing its growth rate.

Chapter 12, “Aggregate Expenditure and Output in the Short Run,” contains thoroughly updated graphs and tables.

Chapter 13, “Aggregate Demand and Aggregate Supply Analysis,” opens with a new discussion of the effect of the business cycle on KB Home and other home builders.

Chapter 14, “Money, Banks, and the Federal Reserve System,” opens with a new discussion of why many people in India are using Paytm, an app that allows users to make payments at retail stores or online. A new *Apply the Concept* continues the analysis of this topic by discussing why some businesses in the United States and Europe no longer accept cash.

Chapter 15, “Monetary Policy,” opens with an updated account of why interest rates on some mortgages in Europe are negative. An important new section describes the policy tools the Federal Reserve uses to manage its target for the federal funds rate, now that banks hold \$2 trillion in excess reserves.

Chapter 16, “Fiscal Policy,” opens with a new discussion of the effects of federal government infrastructure spending on Vulcan Materials and other construction firms, as well as on the wider economy. A centerpiece of President Trump’s economic plan is using changes to the federal tax code, as well as other policies, to increase the annual growth rate of real GDP to 3 percent. We discuss what would be required

to achieve this goal in a new section, “Explaining Long-Run Increases in Real GDP,” and in a new *Apply the Concept*. New Table 16.4 summarizes how the Congressional Budget Office forecast real GDP growth for 2017–2027.

Chapter 17, “Inflation, Unemployment, and Federal Reserve Policy,” opens with a new discussion of how the Fed’s attempts to bring the economy in for a soft landing will affect General Motors, Toll Brothers, and other firms.

Chapter 18, “Macroeconomics in an Open Economy,” opens with a new discussion of the effect of fluctuations in exchange rates on Amazon’s profit. New *Solved Problem 18.2* analyzes how fluctuations in the value of the yen affect Toyota, and an updated *Apply the Concept* considers how the Trump administration has reacted to fluctuations in the value of the dollar.

Chapter 19, “The International Financial System,” contains updated coverage of the struggles of the euro and the pressure the Trump administration has faced to label China a currency manipulator.

To make room for the new content described earlier, we have cut approximately 13 *Apply the Concepts* and 2 *Solved Problems* from the previous edition and transferred some of them to the book’s *Instructor’s Manual*, where they are available for instructors who wish to continue using them.

Solving Teaching and Learning Challenges

Many students who take a principles of economics course have difficulty seeing the relevance of the key concepts of opportunity cost, trade-offs, scarcity, and demand and supply to their lives and their careers. This reduces the willingness of some students to prepare for class and to be engaged during class. We address this challenge with contextual learning, a modern organization of content, and an extensive selection of digital assets available on MyLab Economics.

The Foundation:

Contextual Learning and Modern Organization

We believe a course is successful if students can apply what they have learned to both their personal lives and their careers, and if they have developed the analytical skills to understand what they read in the media. That’s why we explain economic concepts by using many real-world business examples and applications in the chapter openers, graphs, *Apply the Concept* features, *An Inside Look* features, and end-of-chapter problems. This approach helps majors from all disciplines become educated consumers, voters, and citizens. In addition to our widget-free approach, we have a modern organization and place interesting policy topics early in the book to pique student interest.

Students come to study macroeconomics with a strong interest in understanding events and developments in the economy. We capture that interest and develop students’ economic intuition and understanding by presenting macroeconomics in a way that is modern and based in the real world of business and economic policy. And we believe we achieve this presentation without making the analysis more difficult. We avoid the recent trend of using simplified versions of intermediate models, which are often more detailed and complex than what students need to understand the basic macroeconomic issues. Instead, we use a more realistic version of the familiar aggregate demand

and aggregate supply model to analyze short-run fluctuations and monetary and fiscal policy. We also avoid the “dueling schools of thought” approach often used to teach macroeconomics at the principles level. We emphasize the many areas of macroeconomics where most economists agree. And we present throughout real business and policy situations to develop students’ intuition. Here are a few highlights of our approach to macroeconomics:

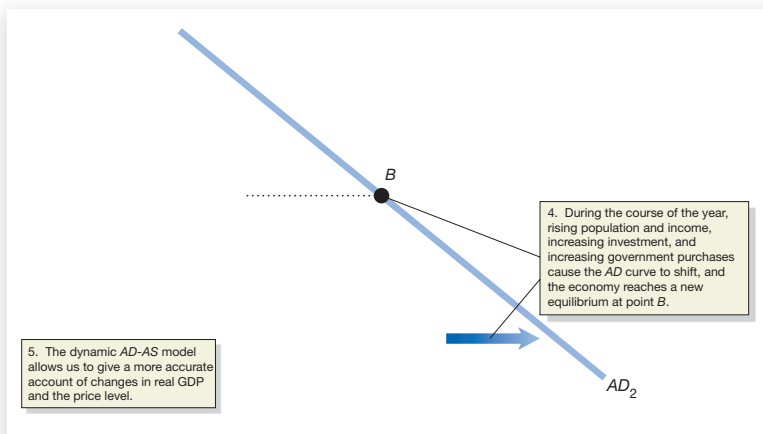

- **A careful discussion of macro statistics.** Many students pay some attention to the financial news and know that the release of statistics by federal agencies can cause movements in stock and bond prices. A background in macroeconomic statistics helps clarify some of the policy issues encountered in later chapters. In Chapter 8, “GDP: Measuring Total Production and Income,” and Chapter 9, “Unemployment and Inflation,” we provide students with an understanding of the uses and potential shortcomings of the key macroeconomic statistics, without getting bogged down in the minutiae of how the statistics are constructed. So, for instance, we discuss the important differences between the payroll survey and the household survey for understanding conditions in the labor market. We explain why financial markets react more strongly to news from the payroll survey. We provide a discussion of the employment–population ratio, which is not covered in some other texts but which many economists regard as a key measure of labor market performance.
- **Early coverage of long-run topics.** We place key macroeconomic issues in their long-run context in Chapter 10, “Economic Growth, the Financial System, and Business Cycles,” and Chapter 11, “Long-Run Economic Growth: Sources and Policies.” Chapter 10 puts the business cycle in the context of underlying long-run growth and discusses what actually happens during the phases of the business cycle. We believe this material is important if students are to have the understanding of business cycles they will need to interpret economic events; this material is often discussed only briefly or omitted entirely in other books. We know that many instructors prefer to have a short-run orientation to their macro courses, with a strong emphasis on policy. Accordingly, we have structured Chapter 10 so that its discussion of long-run growth is sufficient for instructors who want to move quickly to short-run analysis. Chapter 11 uses a simple neoclassical growth model to explain important growth issues. We apply the model to topics such as the decline of the Soviet economy, the long-run prospects for growth in China, the implications of the slowdown in productivity growth for the U.S. economy, and the failure of many developing countries to sustain high growth rates. *And* we challenge students with the discussion “Why Isn’t the Whole World Rich?”
- **A dynamic model of aggregate demand and aggregate supply.** We take a fresh approach to the standard aggregate demand and aggregate supply ($AD-AS$) model. We realize there is no good, simple alternative to using the $AD-AS$ model when explaining movements in the price level and in real GDP. But we know that more instructors are dissatisfied with the $AD-AS$ model than with any other aspect of the macro principles course. The key problem, of course, is that $AD-AS$ is a static model that attempts to account for dynamic changes in real GDP and the price level. Our approach retains the basics of the $AD-AS$ model but makes it more accurate and useful by making it more dynamic. We emphasize two points: (1) Changes in the position of the short-run (upward-sloping) aggregate supply curve depend mainly on the state of expectations of the inflation rate; and (2) the existence of growth in the economy means that the long-run (vertical) aggregate supply curve shifts to the right every year. This “dynamic” $AD-AS$ model provides students with a more accurate understanding of the causes and consequences of fluctuations in real GDP and the price level. Chapter 13, “Aggregate Demand and Aggregate Supply Analysis,” includes a three-layer, full-color acetate for the key introductory dynamic $AD-AS$ graph (Figure 13.8, “A Dynamic Aggregate Demand and Aggregate Supply Model,” on page 460 and reproduced on the next page). We created this acetate to help students see how the graph builds step by step and to

The first acetate overlay adds the shifts in the long- and short-run aggregate supply curves.

The second acetate overlay adds the shifts in the aggregate demand curve to complete the dynamic model.

help make the graph easier for instructors to present. The acetate will help instructors who want to use dynamic $AD-AS$ in class but believe the model needs to be developed carefully. We introduce this model in Chapter 13 and use it to discuss monetary policy in Chapter 15, “Monetary Policy,” and fiscal policy in Chapter 16, “Fiscal Policy.” The material on dynamic $AD-AS$ is presented in self-contained sections in Chapters 13, 15, and 16, so instructors may safely omit the sections on the dynamic $AD-AS$ model without any loss in continuity to the discussion of macroeconomic theory and policy.

- Extensive coverage of monetary policy.** Because of the central role monetary policy plays in the economy and in students’ curiosity about business and financial news, we devote two chapters—Chapter 15, “Monetary Policy,” and Chapter 17, “Inflation, Unemployment, and Federal Reserve Policy”—to the topic. We emphasize the issues involved in the Fed’s choice of monetary policy targets, and we include coverage of the Taylor rule. We also cover the new Fed’s new policy tools and the debate over whether the Fed’s policies during and after the 2007–2009 financial crisis were consistent with its mandate under the Federal Reserve Act.
- Coverage of both the demand-side and supply-side effects of fiscal policy.** Our discussion of fiscal policy in Chapter 16, “Fiscal Policy,” carefully distinguishes between automatic stabilizers and discretionary fiscal policy. We also provide significant coverage of the supply-side effects of fiscal policy. A new section discusses the requirements for the Trump administration to hit its goal of restoring the long-run annual growth rate of real GDP to 3 percent.
- A self-contained but thorough discussion of the Keynesian income–expenditure approach.** The Keynesian income–expenditure approach (the “45°-line diagram,” or “Keynesian cross”) is useful for introducing students to the short-run relationship between spending and production. Many instructors, however, prefer to omit this material. Therefore, we use the 45°-line diagram only in Chapter 12, “Aggregate Expenditure and Output in the Short Run.” The discussions of monetary and fiscal policy in Chapter 15, “Monetary Policy,” and Chapter 16, “Fiscal Policy,” respectively, use only the $AD-AS$ model, making it possible to omit Chapter 12.
- Extensive international coverage.** We include three chapters devoted to international topics: Chapter 7, “Comparative Advantage and the Gains from International Trade,” Chapter 18, “Macroeconomics in an Open Economy,” and Chapter 19, “The International Financial System.” Having a good understanding of the international trading and

financial systems is essential to understanding the macroeconomy and to satisfying students' curiosity about the economic world around them. In addition to the material in our three international chapters, we weave international comparisons into the narratives of several other chapters, including our discussion of labor market policies in Chapter 17, "Inflation, Unemployment, and Federal Reserve Policy," and central banking in Chapter 14, "Money, Banks, and the Federal Reserve System."

- **Flexible chapter organization.** Because we realize that there are a variety of approaches to teaching principles of macroeconomics, we have structured our chapters for maximum flexibility. For example, our discussion of long-run economic growth in Chapter 10, "Economic Growth, the Financial System, and Business Cycles," makes it possible for instructors to omit the more thorough discussion of these issues in Chapter 11, "Long-Run Economic Growth: Sources and Policies." Our discussion of the Keynesian 45°-line diagram is confined to Chapter 12, "Aggregate Expenditure and Output in the Short Run," so that instructors who do not use this approach can proceed directly to aggregate demand and aggregate supply analysis in Chapter 13, "Aggregate Demand and Aggregate Supply Analysis." While we devote two chapters to monetary policy, the first of these—Chapter 15, "Monetary Policy"—is a self-contained discussion, so instructors may safely omit the material in Chapter 17, "Inflation, Unemployment, and Federal Reserve Policy," if they choose to. Finally, instructors may choose to omit all three of the international chapters (Chapter 7, "Comparative Advantage and the Gains from International Trade," Chapter 18, "Macroeconomics in an Open Economy," and Chapter 19, "The International Financial System"), cover just Chapter 7 on international trade, cover just Chapter 18, or cover Chapters 18 and 19 while omitting Chapter 7. Please refer to the flexibility chart shown earlier on pages xviii–xix to help select the chapters and order best suited to your classroom needs.

MyLab Economics

OVERVIEW

Reach every student by pairing this text with MyLab Economics

MyLab is the teaching and learning platform that empowers you to reach *every* student. By combining trusted author content with digital tools and a flexible platform, MyLab personalizes the learning experience and improves results for each student. Learn more about MyLab Economics at www.pearson.com/mylab/economics.

Deliver trusted content

You deserve teaching materials that meet your own high standards for your course. That's why we partner with highly respected authors to develop interactive content and course-specific resources that you can trust—and that keep your students engaged.

Empower each learner

Each student learns at a different pace. Personalized learning pinpoints the precise areas where each student needs practice, giving all students the support they need—when and where they need it—to be successful.

Teach your course your way

Your course is unique. So whether you'd like to build your own assignments, teach multiple sections, or set prerequisites, MyLab gives you the flexibility to easily create *your* course to fit *your* needs.

Improve student results

When you teach with MyLab, student performance improves. That's why instructors have chosen MyLab for over 15 years, touching the lives of over 50 million students.

FEATURES IN THE BOOK AND SUPPORTING RESOURCES ON MYLAB ECONOMICS

Students and instructors will find the following features in the seventh edition and supporting online resources on MyLab Economics.

Business Cases and An Inside Look News Articles

Each chapter-opening case provides a real-world context for learning, sparks students' interest in economics, and helps unify the chapter. The case describes an actual company facing a real situation. The company is integrated in the narrative, graphs, and pedagogical features of the chapter. Some of the chapter openers focus on the role of entrepreneurs in developing new products and bringing them to market. For example, Chapter 2 features Elon Musk of Tesla Motors; Chapter 13 features KB Home founders Donald Kaufman and Eli Broad; Chapter 14 features Paytm founder Vijay Shekhar Sharma; and Chapter 18 features Jeff Bezos of Amazon.

Students can visit MyLab Economics to watch a brief video we developed and filmed to summarize the key points of each chapter opener.

3 Where Prices Come From: The Interaction of Demand and Supply

How Smart Is Your Water?

What does a firm do when its primary product starts to fall out of fashion? The Coca-Cola Company and PepsiCo, Inc., have faced that question in recent years. Between 2004 and 2016, measured by volume, sales in the United States of carbonated beverages like Coke and Pepsi declined by more than 25 percent, while sales of bottled water increased by more than 50 percent. In 2016, sales of bottled water were greater than sales of carbonated beverages for the first time. This change resulted from a shift in consumer tastes as many people, particularly millennials, increased their demand for healthier beverages that don't contain sugar or artificial sweeteners.

In 1994, Pepsi responded to increased consumer demand for bottled water by introducing Aquafina water, and in 1999, Coke responded by introducing Dasani water. Neither company, though, had found selling bottled water to be as profitable as selling soda. As a result of decades of advertising, Coke and Pepsi are two of the most recognizable brand names in the world. The companies also have networks of bottling plants and commitments from supermarkets to provide them with extensive shelf space. Other companies have had trouble competing with Coke and Pepsi, which together account for nearly 75 percent of the market for carbonated beverages. The Aquafina and Dasani brands are not nearly as well known, however, so other companies have been better able to compete in the bottled water market, limiting Coke and Pepsi to less than 20 percent of that market.

By 2017, Coke and Pepsi were attempting to increase their profits in the bottled water market by introducing premium water or smart water brands. With regular bottled water, firms filter tap water or spring water to remove impurities. With premium water, like Pepsi's LIFEWTR and Coke's smartwater, firms also add ingredients, typically electrolytes. Although many nutritionists are skeptical that premium water is any better for you than regular bottled water, demand for premium bottled water has been increasing rapidly. Both Coke and Pepsi have been able to

charge higher prices for their premium water brands than they do for their carbonated beverages. But the firms were facing determined competition from Nestlé's Perrier brand and Danone's Evian brand, among many others.

Although premium water was a hot product in 2017, there are no guarantees in a market system. Will Coke and Pepsi and their competitors be able to continue charging higher prices for premium water than for regular bottled water, or will competition force down prices and make selling premium bottled water no more profitable than selling regular bottled water? Although competition is not always good news for firms trying to sell products, it is great news for consumers because it increases the choice of available products and lowers the prices consumers pay for those products.

AN INSIDE LOOK on page 98 discusses how McDonald's has responded to shifts in consumer demand by serving breakfast all day, allowing customers to order food online, and offering home delivery.

Chapter Outline & Learning Objectives

- 3.1 The Demand Side of the Market, page 74
List and describe the variables that influence demand.
- 3.2 The Supply Side of the Market, page 82
List and describe the variables that influence supply.
- 3.3 Market Equilibrium: Putting Demand and Supply Together, page 86
Use a graph to illustrate market equilibrium.
- 3.4 The Effect of Demand and Supply Shifts on Equilibrium, page 90
Use demand and supply graphs to predict changes in prices and quantities.

Economics in Your Life & Career

Can You Forecast the Future Demand for Premium Bottled Water?

Firms face many challenges in responding to changes in consumer demand. Firms selling premium bottled water need to forecast future demand in order to determine how much production capacity they will need. If you were a manager for Coca-Cola, PepsiCo, Nestlé, Bai, or another firm selling premium bottled water, what factors would you take into account in forecasting future demand? As you read this chapter, try to answer this question. You can check your answers against those we provide on page 97 at the end of this chapter.

An Inside Look is a two-page feature that shows students how to apply the concepts from the chapter to the analysis of a news article. The feature appears at the end of Chapters 1–4. An *Inside Look* presents an excerpt from an article, analysis of the article, a graph(s), and critical thinking questions. Additional articles that are continuously updated are located on MyLab Economics.

4 ways McDonald's is about to change

McDonald's has one major goal for 2017: win back customers. The burger chain's multi-year turnaround effort, which found success with its All-Day Breakfast promotion, hasn't quite come to fruition, yet.

During its investor day in Chicago on Wednesday, the company's executives touted several big changes that the chain will be making to win back the more than 500 million visits a lost since 2012.

To deliver sustained growth, we have to attract more customers, more often," CEO Steve Easterbrook said.

McDonald's focus will be on four pillars: menu innovation, store renovation, digital ordering and delivery.

McDonald's appears to [have] found their focus on profitability through disciplined efforts to reduce costs and focus on the customer experience, including consumer-facing technology, improved conversion in payment and delivery and value to drive more customer visits throughout the day," Darren Tristano, president of Technomic, told CNBC.

"For the world's largest restaurant company, this means trying to catch up with younger consumer expectations while continuing to engage older generations and consumers that grew up with McDonald's,"

1. Digital Ordering

The Golden Arches will continue to expand its mobile order and pay platform. While late to the game, the company is expected to launch the product in 20,000 restaurants by the end of 2017.

Easterbrook noted back in November that McDonald's is focused on how customers order, when they order, how they pay and how they want to be served. Customers can pay with cash, credit, debit, Apple pay and Android pay and will soon be able to order through the company's mobile service.

2. Delivery

Delivery is also an avenue that McDonald's is exploring. The company, which has a large delivery presence in Asia—which accounts for 10 percent of system sales in that market—has been hoping to capitalize on the growing industry demand by offering delivery in America. It is currently testing out several models, both in-house and via third-party providers.

The company said 71 percent of the population in its top five markets—America, France, the U.K., Germany and Canada—are within three miles of a McDonald's and 85 percent are within five miles of a chain.

Sources: Sarah Whelan, "4 ways McDonald's is about to change," CNBC.com, March 1, 2017.

Key Points in the Article

McDonald's is the highly competitive fast-food chain. The firm has seen a decline in sales for its straight years. Searching for additional ways to increase its sales, McDonald's plans to focus on customer experience. The company recently introduced an all-day breakfast promotion, and in March 2017 announced it will begin to focus on new menu items, restaurant renovations, digital ordering and delivery. With these changes, McDonald's hopes to win back younger consumers who have come to expect these services while at the same time continuing to appeal to its long-time customers.

Analyzing the News

In the 5-year period beginning with 2012, customer trips to McDonald's fell by more than 500 million. Chief Executive Officer Steve Easterbrook stated that attracting more visits per customer is needed for the company to sustain growth. The company has chosen to focus on four elements to achieve this growth: menu innovation, store renovations, digital ordering and delivery. Each of these ideas for growth is designed to help increase demand for McDonald's menu items by increasing its customer base and the frequency of customer visits to restaurants.

McDonald's has recently added new items to its menu, including more customizable and gourmet burger and sandwich options. Adding self-service ordering kiosks and table service to its restaurants will make it faster and easier for customers to place orders as well as providing them with a more comfortable, traditional restaurant-like setting while waiting for their orders. If successful, these changes will increase consumers' willingness to buy McDonald's menu items at every price, shifting the demand curve for items to the right.

As consumers have reduced their demand for hamburgers at lunch and dinner, McDonald's has had success offering breakfast items, such as its popular Egg McMuffin, throughout the day. Computing firms, such as Burger King and Wendy's have followed this strategy as well. Suppose Figure 1 below illustrates the market for fast-food breakfast sandwiches. The demand for breakfast sandwiches has increased, shifting the demand curve to the right from D_1 to D_2 , resulting in an increase in both the equilibrium price (P_1 to P_2) and equilibrium quantity (Q_1 to Q_2). Figure 2 illustrates the market for hamburgers. The decline in demand is shown by the demand curve shifting to the left from D_1 to D_2 , resulting in a decrease in both the equilibrium price (P_1 to P_2) and equilibrium quantity (Q_1 to Q_2). This result is a typical one when demand shifts between two goods that are substitutes.

McDonald's plans to continue the expansion of its mobile order-and-pay system, with the intention of launching the service in 20,000 restaurants by the end of 2017. The company is also exploring delivery options for the U.S. market, a strategy that has been successful for McDonald's in Asia. Expanding its mobile order and pay system would appeal to the younger generation of tech-savvy consumers who like to order and pay for products via smartphone apps. A delivery option would appeal to a wide variety of consumers who either do not have time or do not want to take the time to go to a McDonald's location to buy food. Both of these options will likely increase demand for McDonald's menu items.

Thinking Critically

- Why is it particularly important for a firm like McDonald's to stay ahead of trends such as consumers' desire to eat breakfast food throughout the day or younger consumers wanting to order online?
- Suppose that McDonald's and its competitors successfully implement self-service kiosks in their U.S. restaurants, and this investment in technology allows the firms to reduce the number of employees at each location. How would this change affect the market for breakfast sandwiches? Draw a demand and supply graph to illustrate this situation, and explain what happens to equilibrium price and equilibrium quantity.

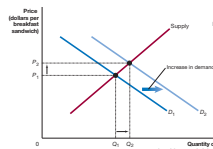

Figure 1: An increase in demand for breakfast sandwiches shifts the demand curve to the right, increasing both equilibrium price and equilibrium quantity.

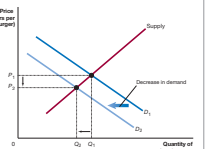

Figure 2: A decrease in the demand for hamburgers, a substitute good for breakfast sandwiches, shifts the demand curve to the left, decreasing both equilibrium price and equilibrium quantity.

Solved Problems

Many students have great difficulty handling applied economics problems. We help students overcome this hurdle by including in each chapter two or three worked-out problems that analyze real-world economic issues they hear and read about in the news. Our goals are to keep students focused on the main ideas of each chapter and give them a model of how to solve an economic problem by breaking it down step by step. We tie additional exercises in the end-of-chapter *Problems and Applications* section to every *Solved Problem*. Additional *Solved Problems* appear in the *Instructor's Manuals*. In addition, the Test Banks include problems tied to the *Solved Problems* in the main book. Each of the 32 *Solved Problems* in the printed text is accompanied by a similar Interactive *Solved Problem* on MyLab Economics, so students can have more practice and build their problem-solving skills. These interactive tutorials help students learn to think like economists and apply basic problem-solving skills to homework, quizzes, and exams. Each *Solved Problem* on MyLab Economics and in the digital eText also includes at least one additional graded practice exercise for students.

94 CHAPTER 3 Where Prices Come From: The Interaction of Demand and Supply

The Effect of Demand and Supply Shifts on Equilibrium 95

Solved Problem 3.4

Can We Predict Changes in the Price and Quantity of Organic Corn?

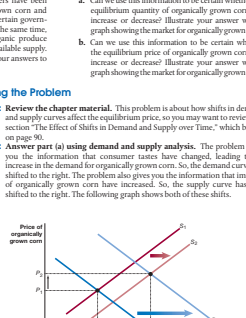

A news article discussed how U.S. consumers have been increasing their demand for organically grown corn and other products, which is growing using only certain government-approved pesticides and fertilizers. At the same time, imports of corn and other varieties of organic produce from foreign countries have increased the available supply. Use demand and supply graphs to illustrate your answers to the following questions.

- Can we use this information to be certain whether the equilibrium quantity of organically grown corn will increase or decrease? Illustrate your answer with a graph showing the market for organically grown corn.
- Can we use this information to be certain whether the equilibrium price of organically grown corn will increase or decrease? Illustrate your answer with a graph showing the market for organically grown corn.

Solving the Problem

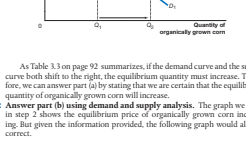

Step 1: Review the chapter material. This problem is about how shifts in demand and supply curves affect the equilibrium price, so you may want to review the section "The Effect of Shifts in Demand and Supply over Time," which begins on page 90.

Step 2: Answer part (a) using demand and supply analysis. The problem gives you the information that consumer tastes have changed, leading to an increase in the demand for organically grown corn. So, the demand curve has shifted to the right. The problem also gives you the information that imports of organically grown corn have increased. So, the supply curve has also shifted to the right. The following graph shows both of these shifts.

As Table 3.3 on page 92 summarizes, if the demand curve and the supply curve both shift to the right, the equilibrium quantity must increase. Therefore, as was answer part (a) by stating that we are certain that the equilibrium quantity of organically grown corn will increase.

Step 3: Answer part (b) using demand and supply analysis. The graph we drew in step 2 shows the equilibrium price of organically grown corn increasing. But given the information provided, the following graph would also be correct.

Unlike the graph in step 2, which shows the equilibrium price increasing, this graph shows the equilibrium price decreasing. The uncertainty about whether the equilibrium price will increase or decrease is consistent with what Table 3.3 indicates happens when the demand curve and the supply curve both shift to the right. Therefore, the answer to part (b) is that we cannot be certain whether the equilibrium price of organically grown corn will increase or decrease.

Extra Credit: During 2016, the equilibrium quantity of organically grown corn increased, while the equilibrium price decreased by 30 percent. We can conclude that both the increase in demand for organically grown corn and the increase in the supply contributed to the increase in consumption of organically grown corn. That the price of organically grown corn fell indicates that the increase in supply had a larger effect on equilibrium in the organically grown corn market than did the increase in demand.

Sources: Jacob Burgin, "Organic Food Sales Are Booming: Why Are American Farmers Crying Poor?" Wall Street Journal, December 30, 2017, and U.S. Department of Agriculture data.

Your Turn: For more practice, do related problems 4.7 and 4.8 on pages 104–105 at the end of this chapter.

MyLab Economics *Study Plan*

Shifts in a Curve versus Movements along a Curve

When analyzing markets using demand and supply curves, remember that when a shift in a demand or supply curve causes a change in equilibrium price, the change in price does not cause a further shift in demand or supply. Suppose that an increase in supply causes the price of a good to fall, while everything else that affects the willingness of consumers to buy the good is constant. The result will be an increase in the quantity demanded but not an increase in demand. For demand to increase, the whole curve must shift. The point is the same for supply: If the price of the good falls but everything else that affects the willingness of sellers to supply the good is constant, the quantity supplied decreases, but the supply does not. For supply to decrease, the whole curve must shift.

MyLab Economics *Study Plan*

Apply the Concept

Each chapter includes two to four *Apply the Concept* features that provide real-world reinforcement of key concepts and help students learn how to interpret what they read on the Web and in newspapers. Most of the over 60 *Apply the Concept* features use relevant, stimulating, and provocative news stories focused on businesses and policy issues. One-third of them are new to this edition, and most others have been updated. Several discuss health care and trade, which have been at the forefront of recent policy discussions. Each *Apply the Concept* has at least one supporting end-of-chapter problem to allow students to test their understanding of the topic discussed. We prepared and filmed a two- or three-minute video to explain the key point of each *Apply the Concept*. These videos are located on MyLab Economics. We include related assessment with each video, so students can test their understanding. The goal of these videos is to summarize key content and bring the applications to life. In our experience, many students benefit from this type of online learning and assessment.

Apply the Concept

MyLab Economics Video

Forecasting the Demand for Premium Bottled Water

It's important for managers to forecast the demand for their products accurately because doing so helps them determine how much of a good to produce. Firms typically set manufacturing schedules at least a month ahead of time. Premium bottled water is a rapidly growing market, and firms need to carefully plan increases in productive capacity. Firms that fail to produce a large enough quantity to keep pace with increasing demand can lose out to competitors. But will the demand for premium bottled water continue to grow at such a rapid pace?

Richard Tedlow of the Harvard Business School has developed a theory of the "three phases of marketing" that can provide some insight into how the markets for many consumer products develop over time. The first phase often has a very large number of firms, each producing a relatively small volume of goods and charging high prices. This phase corresponds to the carbonated soft drink industry in the late nineteenth century, the automobile industry in the early twentieth century, and the personal computer industry in the late 1970s. In the second phase, the market consolidates, with one or a few brands attaining high market shares by selling a large number of units at lower prices. This phase corresponds to the soft drink industry during the middle of the twentieth century, the automobile industry during the 1920s, and the personal computer industry during the 1980s.

Managers at beverage firms will have to take into account a number of factors when estimating the future demand for premium bottled water. Factors that will tend to lead to higher demand for premium bottled water include the popularity of the product with millennials, the trend toward healthier eating habits that has led to declining consumption of carbonated beverages, the taxes on soda that cities have been imposing to both fight obesity and raise tax revenue, and the possibility of attracting consumers who now prefer energy drinks such as Red Bull and sports drinks such as Gatorade. But an obstacle to the rapid growth of demand for premium bottled water comes from doubts raised by some analysts about the benefits from the electrolytes and other ingredients it contains that are not in regular bottled water. If consumers come to believe that these ingredients serve no useful purpose, they may prefer to buy regular bottled water, which typically has a lower price.

As we saw in Chapter 1, economists can use formal models to forecast future values of economic variables. In this case, an economist forecasting the demand for premium bottled water would want to include the factors mentioned in the previous paragraphs as well as other data, including changes over time in demographics and projected income growth.

Sources: Jennifer Maloney, "PepsiCo Gives Its 'Premium' Water a Super Bowl Push," *Wall Street Journal*, January 24, 2017; Quentin Fottrell, "Bottled Water Overtakes Soda as America's No. 1 Drink—Why You Should Avoid Both," *marketwatch.com*, March 12, 2017; and Richard Tedlow, *New and Improved: The Story of Mass Marketing in America*, Cambridge, MA: Harvard Business School Press, 1996.

Your Turn: Test your understanding by doing related problem 1.17 on page 102 at the end of this chapter.

Sara Stathas/Alamy Stock Photo

How will changes in demographics, income, and tastes shape the market for premium bottled water?

Don't Let This Happen to You

We know from many years of teaching which concepts students find most difficult. We include in each chapter a box feature called *Don't Let This Happen to You* that alerts students to the most common pitfalls in that chapter's material. We follow up with a related question in the end-of-chapter *Problems and Applications* section. The questions are also available on MyLab Economics, where students can receive instant feedback and tutorial help.

Concept Checks

Each section of each learning objective concludes with a Concept Check on MyLab Economics that contains one or two multiple-choice, true/false, or fill-in questions. These checks act as "speed bumps" that encourage students to stop and check their understanding of fundamental terms and concepts before moving on to the next section. The goal of this digital resource is to help students assess their progress on a section-by-section basis so they can be better prepared for homework, quizzes, and exams.

Graphs and Summary Tables

Graphs are an indispensable part of a principles of economics course but are a major stumbling block for many students. Every chapter except Chapter 1 includes end-of-chapter problems that require students to draw, read, and interpret graphs. Interactive graphing exercises appear on the book's supporting Web site. We use four devices to help students read and interpret graphs:

1. Detailed captions
2. Boxed notes
3. Color-coded curves
4. Summary tables with graphs (see pages 80, 85, and 444 for examples)

Don't Let This Happen to You

Remember: A Change in a Good's Price Does Not Cause the Demand or Supply Curve to Shift

Suppose a student is asked to draw a demand and supply graph to illustrate how an increase in the price of oranges would affect the market for apples, with other variables being constant. He draws the graph on the left and explains it as follows: "Because apples and oranges are substitutes, an increase in the price of oranges will cause an initial shift to the right in the demand curve for apples, from D_1 to D_2 . However, because this initial shift in the demand curve for apples results in a higher price for apples, P_2 , consumers will find apples less desirable, and the demand curve will shift to the left, from D_2 to D_3 , resulting in a final equilibrium price of P_3 ." Do you agree or disagree with the student's analysis?

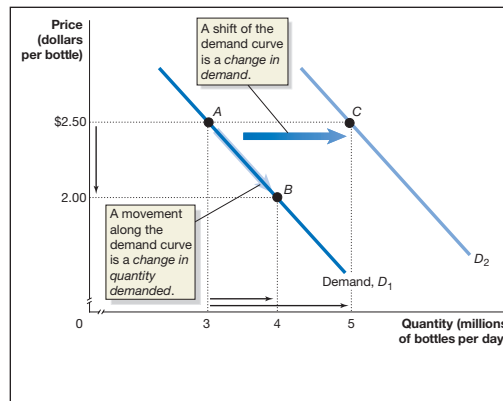

You should disagree. The student has correctly understood that an increase in the price of oranges will cause the demand curve for apples to shift to the right. But, the second demand curve shift the student describes, from D_2 to

D_3 , will not take place. Changes in the price of a product do not result in shifts in the product's demand curve. Changes in the price of a product result only in movements along a demand curve.

The graph on the right shows the correct analysis. The increase in the price of oranges causes the demand curve for apples to increase from D_1 to D_2 . At the original price, P_1 , the increase in demand initially results in a shortage of apples equal to $Q_2 - Q_1$. But, as we have seen, a shortage causes the price to increase until the shortage is eliminated. In this case, the price will rise to P_2 , where both the quantity demanded and the quantity supplied are equal to Q_2 . Notice that the increase in price causes a decrease in the quantity demanded, from Q_3 to Q_2 , but does not cause a decrease in demand.

MyLab Economics Study Plan

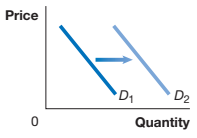

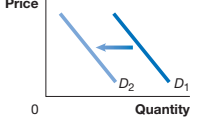

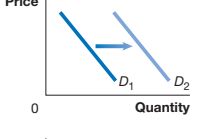

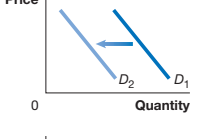

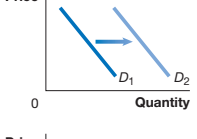

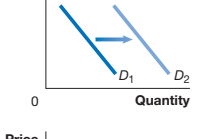

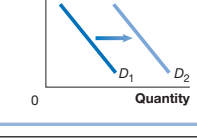

Your Turn: Test your understanding by doing related problems 4.13 and 4.14 on page 105 at the end of this chapter.

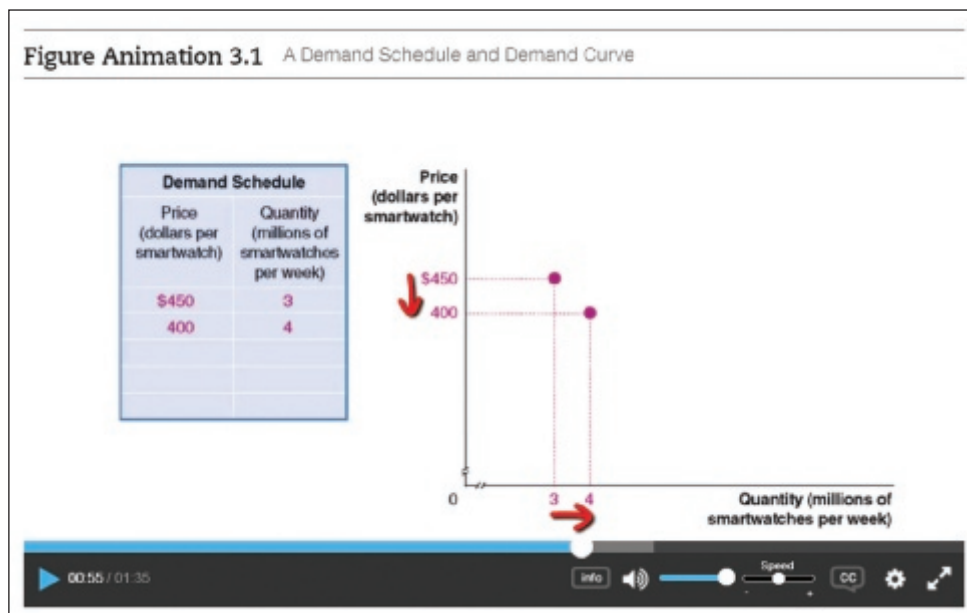

MyLab Economics Animation
Figure 3.3

A Change in Demand versus a Change in Quantity Demanded

If the price of premium bottled water falls from \$2.50 to \$2.00, the result will be a movement along the demand curve from point A to point B—an increase in quantity demanded from 3 million bottles to 4 million. If consumers' incomes increase, or if another factor changes that makes consumers want more of the product at every price, the demand curve will shift to the right—an increase in demand. In this case, the increase in demand from D_1 to D_2 causes the quantity of premium bottled water demanded at a price of \$2.50 to increase from 3 million bottles at point A to 5 million at point C.

Table 3.1	An increase in ...	shifts the demand curve ...	because ...
Variables That Shift Market Demand Curves	income (and the good is normal)	 <p>The graph shows a coordinate system with 'Price' on the vertical axis and 'Quantity' on the horizontal axis. 	population	 <p>The graph shows a coordinate system with 'Price' on the vertical axis and 'Quantity' on the horizontal axis. Two downward-sloping demand curves are shown: a darker blue curve labeled D_1 and a lighter blue curve labeled D_2. A blue arrow points from D_1 to D_2, indicating a rightward shift. The origin is marked with '0'.</p>	additional consumers result in a greater quantity demanded at every price.
	the expected price of the good in the future	 <p>The graph shows a coordinate system with 'Price' on the vertical axis and 'Quantity' on the horizontal axis. Two downward-sloping demand curves are shown: a darker blue curve labeled D_1 and a lighter blue curve labeled D_2. A blue arrow points from D_1 to D_2, indicating a rightward shift. The origin is marked with '0'.</p>	consumers buy more of the good today to avoid the higher price in the future.

Each of the 156 numbered figures in the text has a supporting animated version on MyLab Economics. The goal of this digital resource is to help students understand shifts in curves, movements along curves, and changes in equilibrium values. Having an animated version of a graph helps students who have difficulty interpreting the static version in the printed text. We include graded practice exercises with the animations. In our experience, many students benefit from this type of online learning.

Approximately 35 graphs are continuously updated online with the latest available data from FRED (Federal Reserve Economic Data), which is a comprehensive, up-to-date data set maintained by the Federal Reserve Bank of St. Louis. Students can display a pop-up graph that shows new data. The goal of this digital feature is to help students understand how to work with data and understand how including new data affects graphs.

Review Questions and Problems and Applications—Grouped by Learning Objective to Improve Assessment

We group the main end-of-chapter material—*Summary*, *Review Questions*, and *Problems and Applications*—under learning objectives. The goals of this organization are to make it easier for instructors to assign problems based on learning objectives, both in the book and on MyLab Economics, and to help students efficiently review material that they find difficult. If students have difficulty with a particular learning objective, an instructor can easily identify which end-of-chapter questions and problems support that objective and assign them as homework or discuss them in class. Every exercise in a chapter's *Problems and Applications* section is available on MyLab Economics. Using MyLab Economics, students can complete these and many other exercises online, get tutorial help, and receive instant feedback and assistance on exercises they answer incorrectly. Also, student learning will be enhanced by having the summary material and problems grouped together by learning objective, which allows them to focus on the parts of the chapter they find most challenging. Each major section of the chapter, paired with a learning objective, has at least two review questions and three problems.

As in the previous editions, we include one or more end-of-chapter problems that test students' understanding of the content presented in the *Solved Problem*, *Apply the Concept*, and *Don't Let This Happen to You* special features in the chapter. Instructors can cover a feature in class and assign the corresponding problem(s) for homework. The Test Bank Files also include test questions that pertain to these special features.

Real-Time Data Exercises

We end select chapters with at least two *Real-Time Data Exercises* that help students become familiar with a key data source, learn how to locate data, and develop skills in interpreting data. *Real-Time Data Analysis (RTDA) Exercises*, marked with , allow students and instructors to use the very latest data from FRED, the Federal Reserve Bank of St. Louis.

Developing Career Skills

Learning key economic terms, concepts, and models are all important. For a course to be successful, students need to develop the skills and confidence to apply what they've learned outside the classroom. Chapter 1, "Economics: Foundations and Models," now includes a new section that describes economics as a career and the key skills students of any major can gain from studying economics. As described earlier, features such as chapter-opening business cases, *Apply the Concepts*, *Solved Problems*, and end-of-chapter problems provide a real-world context for learning that exposes students to economics as applied in a variety of large and small businesses, government agencies, and nonprofit organizations. *Critical Thinking Exercises*, a new end-of-chapter category in this edition, help build student skills to analyze and interpret information and apply reasoning and logic to new or unfamiliar ideas and situations.

Economics in Your Life & Career

After the chapter-opening real-world business case, we have a feature titled *Economics in Your Life & Career* that adds a personal dimension to the chapter opener by asking students to consider how economics affects their lives and careers. The feature piques the interest of students and emphasizes the connection between the material they are learning and their personal and career decisions

Economics in Your Life & Career

Can You Forecast the Future Demand for Premium Bottled Water?

Firms face many challenges in responding to changes in consumer demand. Firms selling premium bottled water need to forecast future demand in order to determine how much production capacity they will need. If you were a manager for Coca-Cola, PepsiCo, Nestlé, Bai, or

another firm selling premium bottled water, what factors would you take into account in forecasting future demand? As you read this chapter, try to answer this question. You can check your answers against those we provide on [page 97](#) at the end of this chapter.

At the end of the chapter, we use the chapter concepts to answer the questions asked at the beginning of the chapter.

Economics in Your Life & Career

Can You Forecast the Future Demand for Premium Bottled Water?

At the beginning of this chapter, we asked what variables you would take into account in forecasting future demand if you were a manager for a firm selling premium bottled water. In Section 3.1, we discussed the factors that affect the demand for a product and provided a list of the most important variables. In the *Apply the Concept* on page 81, we discussed how economists often use formal models to forecast future demand for a product.

In forecasting demand for premium bottled water, you should take into account factors such as changing demographics, as millennials become a larger fraction of prime-age consumers, and the likelihood that

the demand for competing goods, such as carbonated sodas, will decline as consumers turn toward buying healthier products and as more cities impose soda taxes. You may also need to consider whether increased advertising of premium bottled water by large firms such as Coca-Cola and PepsiCo will raise consumer awareness of the product and increase demand for the premium bottled water being sold by other firms as well.

The factors discussed in this chapter provide you with the basic information needed to forecast demand for premium bottled water, although arriving at numerical forecasts requires using statistical analysis that you can learn in more advanced courses.

Instructor Teaching Resources

The authors and Pearson Education have worked together to integrate the text, print, and media resources to make teaching and learning easier.

Supplements Available to Instructors for Download at www.pearsonhighered.com	Features of the Supplement
Instructor's Manual Authored by Edward Scahill of the University of Scranton	<ul style="list-style-type: none"> • Chapter-by-chapter summaries organized by learning objectives • Extended examples and class exercises • Teaching outlines incorporating key terms and definitions, teaching tips, topics for class discussion • <i>New Solved Problems</i> • <i>New Apply the Concept</i> features • Solutions to all review questions, problems, and real-time data exercises in the book
Test Bank Authored by Randy Methenitis of Richland College	<ul style="list-style-type: none"> • 4,000 multiple-choice, true/false, short-answer, and graphing questions. • Test questions are annotated with the following categories: Difficulty—1 for straight recall; 2 for some analysis; and 3 for complex analysis Type—multiple-choice, true/false, short-answer, essay Topic—the term or concept the question supports Learning outcome Page number in the main book Special feature in the main book The Association to Advance Collegiate Schools of Business (AACSB) Guidelines (see description on the next page)
Computerized TestGen	<ul style="list-style-type: none"> • Allows instructors to customize, save, and generate classroom tests. • Instructors can edit, add, or delete questions from the Test Banks; analyze test results; and organize a database of tests and student results. • Many options are available for organizing and displaying tests, along with search and sort features. • The software and the Test Banks can be downloaded from www.pearsonhighered.com.
Three Sets of PowerPoint Lecture Presentations Authored by Paul Holmes of Ashland University	<ul style="list-style-type: none"> • A comprehensive set of PowerPoint slides can be used by instructors for class presentations or by students for lecture preview or review. These slides include all the graphs, tables, and equations in the textbook. Two versions are available—step-by-step mode, in which you can build graphs as you would on a blackboard, and automated mode, in which you use a single click per slide. • A comprehensive set of PowerPoint slides have Classroom Response Systems (CRS) questions built in so that instructors can incorporate CRS “clickers” into their classroom lectures. • Student versions of the PowerPoint slides are available as .pdf files. This version allows students to print the slides and bring them to class for note taking.

What Is the AACSB?

The Association to Advance Collegiate Schools of Business (AACSB) is a not-for-profit corporation of educational institutions, corporations, and other organizations devoted to the promotion and improvement of higher education in business administration and accounting. A collegiate institution offering degrees in business administration or accounting may volunteer for AACSB accreditation review. The AACSB expects a curriculum to include learning experiences in the following categories of Assurance of Learning Standards: Written and Oral Communication; Ethical Understanding and Reasoning; Analytical Thinking; Information Technology; Interpersonal Relations and Teamwork, Diverse and Multicultural Work; Reflective Thinking; and Application of Knowledge. Test Bank questions that test skills relevant to these standards are tagged with the appropriate standard. For example, a question testing the moral questions associated with externalities would receive the Ethical Understanding and Reasoning tag.

Acknowledgements

The guidance and recommendations of the following instructors helped us develop the revision plans for the seventh edition and the supplements package. While we could not incorporate every suggestion from every consultant board member, reviewer, or accuracy checker, we do thank each and every one of you and acknowledge that your feedback was indispensable in developing this text. We greatly appreciate your assistance in making this the best text it could be; you have helped a whole new generation of students learn about the exciting world of economics.

Accuracy Review Board

Our accuracy checkers did a particularly painstaking and thorough job of helping us proof the graphs, equations, and features of the text and supplements. We are grateful for their time and commitment:

Fatma Abdel-Raouf, Goldey-Beacom College
 Gbenga Ajilore, The University of Toledo
 Harry Ellis, University of North Texas
 Robert Gillette, University of Kentucky
 Anthony Gyapong, Pennsylvania State University—
 Abington
 Randy Methenitis, Richland College
 Brian Rosario, University of California—Davis
 Edward Scahill, University of Scranton

Reviewers

The guidance and thoughtful recommendations of many instructors helped us develop and implement a revision plan that improved the book's content, enhanced the figures, and strengthened the assessment features. We extend special thanks to Edward Scahill of the University of Scranton for helping us revise the chapter openers and the solutions to the end-of-chapter questions and problems, to Randy Methenitis of Richland College for helping us revise the *An Inside Look* feature in Chapters 1–4, and to Fernando Quijano for creating all the figures in the book and supplements. We are grateful for the comments and many helpful suggestions received from the following reviewers:

Mark Abajian, University of San Diego
 Anna Antus, North Hennepin Community College
 Ali Arshad, Central New Mexico Community College
 David Barrus, Brigham Young University—Idaho
 Leon Battista, Quinnipiac University
 Susan Bell, Seminole State College of Florida
 Bruce Bellner, The Ohio State University
 Jennis Biser, Austin Peay State University

Previous Edition Class Testers, Accuracy Reviewers, and Consultants

The guidance and recommendations of the following instructors helped us shape the previous editions.

Class Testers

We are grateful to both the instructors who class-tested manuscript of the first edition and their students for providing useful recommendations on how to make chapters more interesting, relevant, and accurate:

Charles A. Bennett, Gannon University
 Anne E. Bresnock, University of California, Los Angeles,
 and California State Polytechnic University–Pomona
 Linda Childs-Leatherbury, Lincoln University, Pennsylvania
 John Eastwood, Northern Arizona University
 David Eaton, Murray State University
 Paul Elgatian, St. Ambrose University
 Patricia A. Freeman, Jackson State University
 Robert Godby, University of Wyoming
 Frank Gunter, Lehigh University
 Ahmed Ispahani, University of La Verne
 Brendan Kennelly, Lehigh University and National
 University of Ireland–Galway
 Ernest Massie, Franklin University
 Carol McDonough, University of Massachusetts–Lowell
 Shah Mehrabi, Montgomery College
 Sharon Ryan, University of Missouri–Columbia
 Bruce G. Webb, Gordon College
 Madelyn Young, Converse College
 Susan Zumas, Lehigh University

Accuracy Review Boards

We are grateful to the following accuracy checkers of the previous editions for their hard work on the book and supplements:

Fatma Abdel-Raouf, Goldey-Beacom College
 Anne Alexander, University of Wyoming
 Clare Battista, California Polytechnic State University
 Mohammad Bajwa, Northampton Community College
 Cynthia Bansak, St. Lawrence University
 Hamid Bastin, Shippensburg University

Doris Bennett, Jacksonville State University
 Kelly Hunt Blanchard, Purdue University
 Don Bumpass, Sam Houston State University
 Charles Callahan III, State University of New York–
 Brockport
 Mark S. Chester, Reading Area Community College
 Kenny Christianson, Binghamton University
 Ishita Edwards, Oxnard College
 Harold Elder, University of Alabama
 Harry Ellis, University of North Texas
 Can Erbil, Brandeis University
 Marc Fusaro, Arkansas Tech University
 Sarah Ghosh, University of Scranton
 Robert Gillette, University of Kentucky
 Maria Giuili, Diablo Valley College
 Mark Gius, Quinnipiac University
 Robert Godby, University of Wyoming
 William L. Goffe, Pennsylvania State University
 Edward T. Gullason, formerly, Dowling College
 Anthony Gyapong, Pennsylvania State University—
 Abington
 Travis Hayes, University of Tennessee–Chattanooga
 Carol Hogan, University of Michigan–Dearborn
 Anisul M. Islam, University of Houston–Downtown
 Aaron Jackson, Bentley College
 Nancy Jianakoplos, Colorado State University
 Thomas C. Kinnaman, Bucknell University
 Mary K. Knudson, University of Iowa
 Faik A. Koray, Louisiana State University
 Stephan Kroll, California State University–Sacramento
 Tony Lima, California State University–East Bay
 Randy Methenitis, Richland College
 Normal C. Miller, Miami University
 David Mitch, University of Maryland–Baltimore County
 James A. Moreno, Blinn College
 Michael Potepan, San Francisco State University
 Mary L. Pranzo, California State University–Fresno
 Fernando Quijano, Dickinson State University
 Matthew Rafferty, Quinnipiac University
 Ratha Ramoo, Diablo Valley College
 Jeff Reynolds, Northern Illinois University
 Brian Rosario, University of California, Davis
 Joseph M. Santos, South Dakota State University
 Edward Scahill, University of Scranton
 Mark V. Siegler, California State University–Sacramento
 Rachel Small, University of Colorado–Boulder
 Stephen Smith, Bakersfield College
 Rajeev Sooreea, Pennsylvania State University–Altoona
 Rebecca Stein, University of Pennsylvania
 Ed Steinberg, New York University
 Michael Stone, Quinnipiac University
 Arlena Sullivan, Jones County Junior College
 Wendine Thompson–Dawson, University of Utah
 Julianne Treme, University of North Carolina–Wilmington
 Robert Whaples, Wake Forest University

Consultant Boards

We received guidance from a dedicated consultant board during the development of the previous editions at several critical junctures. We relied on the board for input on content, figure treatment, and design:

Kate Antonovics, University of California, San Diego
 Robert Beekman, University of Tampa
 Valerie Bencivenga, University of Texas–Austin
 Kelly Blanchard, Purdue University
 Susan Dadres, Southern Methodist University
 Harry Ellis, Jr., University of North Texas
 Sherman T. Folland, Oakland University
 Robert Gillette, University of Kentucky
 Robert Godby, University of Wyoming
 William L. Goffe, Pennsylvania State University
 Jane S. Himarios, University of Texas–Arlington
 Donn M. Johnson, Quinnipiac University
 Mark Karscig, Central Missouri State University
 Jenny Minier, University of Kentucky
 David Mitch, University of Maryland–Baltimore County
 Nicholas Noble, Miami University
 Michael Potepan, San Francisco State University
 Matthew Rafferty, Quinnipiac University
 Helen Roberts, University of Illinois–Chicago
 Robert Rosenman, Washington State University
 Joseph M. Santos, South Dakota State University
 Stephen Snyder, University of Pittsburgh
 Martin C. Spechler, Indiana University–Purdue University
 Indianapolis
 Robert Whaples, Wake Forest University
 Jonathan B. Wight, University of Richmond

A Word of Thanks

Once again, we benefited greatly from the dedication and professionalism of the Pearson Economics team. Portfolio Manager David Alexander's energy and support were indispensable. David helped mold the presentation and provided words of encouragement whenever our energy flagged. Content Editor Lena Buonanno worked tirelessly to ensure that this text was as good as it could be and to coordinate the many moving parts involved in a project of this magnitude. This new edition posed particular challenges, and we remain astonished at the amount of time, energy, and unfailing good humor she brings to this project. As we worked on the first edition, former Director of Key Markets David Theisen provided invaluable insight into how best to structure a principles text. His advice helped shape nearly every chapter. We extend our thanks to Tricia Murphy, our Product Marketing Manager, and Carlie Marvel, our Field Marketer, for their energy and creativity in presenting our book and digital products to both professors and students.

Christine Donovan managed the entire production process and the extensive supplement package that accompanies the book. Editorial Assistant Nicole Nedwidek assisted the team in completing several tasks, including review surveys and summaries, to help produce both the book and media resources.

We received excellent research assistance on previous editions from Dante DeAntonio, Ed Timmons, Matthew Saboe, David Van Der Goes, and Jason Hockenberry. We thank Elena Zeller, Jennifer Brailsford, Ellen Vandevort Wolf, Emily Webster, Mollie Sweet, Jayme Wagner, and Rebecca Barney for their careful proofreading of first- and second-round page proofs. Over all editions of our books, we received helpful feedback and recommendations from Lehigh University faculty colleagues Frank R. Gunter, Thomas J. Hyclak, and Robert J. Thornton.

As instructors, we recognize how important it is for students to view graphs that are clear and accessible. We are fortunate to have Fernando Quijano render all the figures in our books and also our supplements. Market feedback on the figures continues to be positive. We extend our thanks to Fernando not only for collaborating with us and creating the best figures possible but also for his patience with our demanding schedule.

This seventh edition has several media components, which required skilled and patient creators and developers. We extend special thanks to Andy Taylor of Hodja Media for preparing the video clips and to Paul Graf of the University of Indiana–Bloomington for preparing the graph animations. These videos and animations are an important part of our revision.

A good part of the burden of an undertaking on this scale is borne by our families. We appreciate the patience, support, and encouragement of our wives and children.

Economics: Foundations and Models

Why Does Ford Assemble Cars in Both the United States and Mexico?

Until recently, did most U.S. firms operate only within the United States? Although some people believe so, in fact, many U.S. firms have been producing goods abroad for decades. For example, Henry Ford founded the Ford Motor Company in Dearborn, Michigan, in 1903. By the next year, Ford was assembling cars in Ontario, Canada. Ford began assembling cars in Manchester, England, in 1911, and in Mexico in 1925. Clearly, for many decades, Ford has been a multinational corporation, manufacturing and selling its cars around the world. In 2017, though, Ford's non-U.S. operations, particularly those in Mexico, were the subject of political controversy.

Some of the cars Ford assembles in Mexico are sold there, but Ford also exports cars from Mexico to the United States and other countries. In 2017, in an attempt to increase manufacturing employment in the United States, President Donald Trump considered imposing a 35 percent tariff—in effect, a tax—on cars that Ford and other U.S. companies assembled in Mexico for sale in the United States. If the tariff were enacted, U.S. car companies would have to pay the U.S. government an amount equal to 35 percent of the price of these cars at the border. The tariff would increase the prices consumers would pay for these cars and, therefore, reduce their sales. President Trump argued that the tariffs would give U.S. car companies an *economic incentive* to assemble more cars in the United States, which would increase employment in U.S. manufacturing.

U.S. car companies were assembling some cars in Mexico because in a *market system*, firms respond to economic incentives. In this case, the lower wages the companies can pay Mexican workers and the lower prices for auto parts in Mexico reduced Ford's costs by more than \$1,000 per car. Typically, technological progress creates economic incentives for firms to change how they produce goods and services. For example, robotics can lead automobile manufacturers to automate some jobs, reducing

Jonathan Ernst/Reuters/Alamy Stock Photo

employment in the industry. Firms also respond to changes in consumer tastes, as when more people become interested in buying electric cars. But sometimes firms respond to incentives from changes in government policy. For instance, in 1994, the governments of Canada, Mexico, and the United States agreed to the North American Free Trade Agreement (NAFTA), which made it easier for U.S. firms like Ford to ship products from Mexico to the United States. In 2017, some policymakers in Washington believed that a tariff on imports to the United States from Mexico was needed to reverse the economic incentives in NAFTA.

In this chapter and the remainder of this book, we will see how economics provides us with the tools to analyze how firms, consumers, and workers respond to economic incentives and how government policymakers can attempt to reach their objectives by changing those incentives.

AN INSIDE LOOK on **page 20** discusses how likely it is that significant numbers of manufacturing jobs will return to the United States from overseas.

Chapter Outline & Learning Objectives

- 1.1 Three Key Economic Ideas**, page 4
Explain these three key economic ideas: People are rational, people respond to economic incentives, and optimal decisions are made at the margin.
 - 1.2 The Economic Problem That Every Society Must Solve**, page 8
Discuss how an economy answers these questions: What goods and services will be produced? How will the goods and services be produced? Who will receive the goods and services produced?
 - 1.3 Economic Models**, page 12
Explain how economists use models to analyze economic events and government policies.
 - 1.4 Microeconomics and Macroeconomics**, page 16
Distinguish between microeconomics and macroeconomics.
 - 1.5 Economic Skills and Economics as a Career**, page 16
Describe economics as a career and the key skills you can gain from studying economics.
 - 1.6 A Preview of Important Economic Terms**, page 17
Define important economic terms.
- Appendix: Using Graphs and Formulas**, page 28
Use graphs and formulas to analyze economic situations.

Economics in Your Life & Career

Should You Consider a Career in Manufacturing?

In the late 1940s and early 1950s, a third of workers in the United States were employed in manufacturing. Traditionally, many high school graduates viewed working on a manufacturing assembly line as a way to earn a middle-class income. Many college graduates in engineering, accounting, management, and other fields have also found employment in manufacturing. But will manufacturing be a good source of careers in

the future? In December 2016, total employment in U.S. manufacturing was 12.3 million. But the U.S. Bureau of Labor Statistics forecasts that by 2024, this number will decline to 11.4 million. What is the basis for this forecast, and how reliable is it? As you read this chapter, try to answer this question. You can check your answer against the one we provide on **page 19** at the end of this chapter.

In this book, we use economics to answer questions such as the following:

- What determines the prices of goods and services from bottled water to smartphones to automobiles?
- Why have health care costs risen so rapidly?
- Why do firms engage in international trade, and how do government policies, such as tariffs, affect international trade?
- Why does the government control the prices of some goods and services, and what are the effects of those controls?

Economists do not always agree on the answer to every question, and there are lively debates on some issues. Because new economic questions are constantly arising, economists are always developing new methods to analyze them.

All the topics we discuss in this book illustrate a basic fact of life: To attain our goals, we must make choices. We must make choices because we live in a world of **scarcity**, which means that although our wants are *unlimited*, the resources available to fulfill those wants are *limited*. You might want to own a BMW and spend each summer vacationing at five-star European hotels, but unless Bill Gates is a close and generous relative, you probably lack the funds to fulfill these wants. Every day, you make choices as you spend your limited income on the many goods and services available. The finite amount of time you have also limits your ability to attain your goals. If you spend an hour studying for your economics midterm, you have one hour less to study for your history midterm. Firms and the government are in the same situation as you: They must also attain their goals with limited resources.

Scarcity A situation in which unlimited wants exceed the limited resources available to fulfill those wants.

Economics The study of the choices people make to attain their goals, given their scarce resources.

Economics is the study of the choices consumers, business managers, and government officials make to attain their goals, given their scarce resources.

We begin this chapter by discussing three important economic ideas that we will return to many times in the following chapters: *People are rational, people respond to economic incentives, and optimal decisions are made at the margin*. Then, we consider the three fundamental questions that any economy must answer: *What goods and services will be produced? How will the goods and services be produced? and Who will receive the goods and services produced?* Next, we consider the role of *economic models* in analyzing economic issues. **Economic models** are simplified versions of reality used to analyze real-world economic situations. We will explore why economists use models and how they construct them. Finally, we will discuss the difference between microeconomics and macroeconomics, and we will preview some important economic terms.

Economic model A simplified version of reality used to analyze real-world economic situations.

Market A group of buyers and sellers of a good or service and the institution or arrangement by which they come together to trade.

1.1

Three Key Economic Ideas

LEARNING OBJECTIVE: Explain these three key economic ideas: *People are rational, people respond to economic incentives, and optimal decisions are made at the margin*.

Whether your goal is to buy a smartphone or find a part-time job, you will interact with other people in *markets*. A **market** is a group of buyers and sellers of a good or service and the institution or arrangement by which they come together to trade. Examples of markets are the markets for smartphones, houses, haircuts, stocks and bonds, and labor. Most of economics involves analyzing how people make choices and interact in markets. Here are the three important ideas about markets that we'll return to frequently:

1. People are rational.
2. People respond to economic incentives.
3. Optimal decisions are made at the margin.

People Are Rational

Economists generally assume that people are rational. This assumption does *not* mean that economists believe everyone knows everything or always makes the “best” decision. It means that economists assume that consumers and firms use all available information as they act to achieve their goals. Rational individuals weigh the benefits and costs of each action, and they choose an action only if the benefits outweigh the costs. For example, if Apple charges a price of \$649 for its new iPhone, economists assume that the managers at Apple have estimated that this price will earn the company the most profit. Even though the managers may be wrong—maybe a price of \$625 or \$675 would be more profitable—economists assume that the managers at Apple have acted rationally, on the basis of the information available to them, in choosing the price of \$649. Although not everyone behaves rationally all the time, the assumption of rational behavior is very useful in explaining most of the choices that people make.

MyLab Economics [Concept Check](#)

People Respond to Economic Incentives

People act from a variety of motives, including envy, compassion, and religious belief. While not ignoring other motives, economists emphasize that consumers and firms consistently respond to *economic incentives*. This point may seem obvious, but it is often overlooked. For example, according to an article in the *Wall Street Journal*, the FBI couldn't understand why banks were not taking steps to improve security in the face of an increase in robberies: “FBI officials suggest that banks place uniformed, armed guards outside their doors and install bullet-resistant plastic, known as a ‘bandit barrier,’ in front of teller windows.” FBI officials were surprised that few banks took their advice. But the article also reported that installing bullet-resistant plastic costs \$10,000 to \$20,000, and a well-trained security guard receives \$50,000 per year in salary and benefits. The average loss in a bank robbery is only about \$1,200. The economic incentive to banks is clear: It is less costly to put up with bank robberies than to take additional security measures. FBI agents may be surprised by how banks respond to the threat of robberies—but economists are not.

In each chapter, the *Apply the Concept* feature discusses a news story or another application related to the chapter material. Read this *Apply the Concept* for a discussion of whether people respond to economic incentives even when deciding how much to eat and how much to exercise.

MyLab Economics [Video](#)

Does Health Insurance Give People an Incentive to Become Obese?

Obesity is a factor in a variety of diseases, including heart disease, stroke, diabetes, and hypertension, making it a significant health problem in the United States. Body mass index (BMI) is a measurement of a person's weight relative to the person's height. According to the U.S. Centers for Disease Control and Prevention (CDC), an adult with a body mass index (BMI) of 30 or greater is considered *obese*. For example, a 5'6" adult with a BMI of 30 is 40 pounds overweight.

The following two maps show the dramatic increase in obesity between 1994 and 2015. In 1994, in a majority of states, only between 10 percent and 14 percent of the adult population was obese, and in no state was more than 20 percent of the adult population obese. By 2015, in every state, at least 20 percent of the adult population was obese, and in 44 states, at least 25 percent of the adult population was obese.

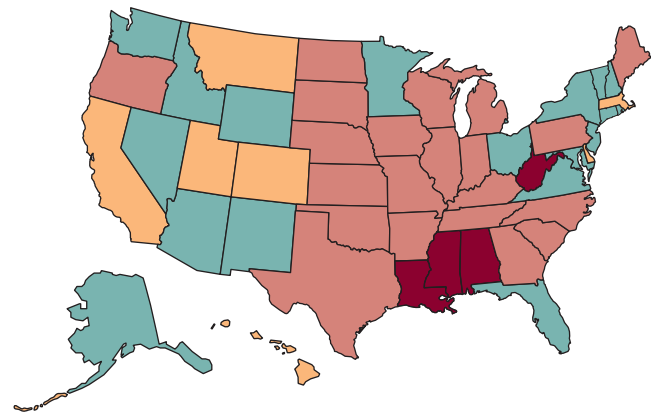

Many people who suffer from obesity have underlying medical conditions. For these people, obesity is a medical problem that they cannot control. The fact that obesity has increased, though, indicates that for some people, obesity is the result of diet and lifestyle choices. Potential explanations for the increase in obesity include greater intake of high-calorie fast foods, insufficient exercise, and a decline in the physical

Percentage of adult population that is obese

(a) Obesity rates in 1994

Percentage of adult population that is obese

(b) Obesity rates in 2015

Source: Centers for Disease Control and Prevention, “Prevalence of Self-Reported Obesity among U.S. Adults.”

activity associated with many jobs. The CDC recommends that teenagers get a minimum of 60 minutes of aerobic exercise per day, a standard that only 15 percent of high school students meet. In 1960, 50 percent of jobs in the United States required at least moderate physical activity. Today, only 20 percent of jobs do. As a result, a typical worker today who may work at a computer is burning off about 130 fewer calories per workday than a worker in the 1960s who was more likely to have worked in a manufacturing plant.

In addition to eating too much and not exercising enough, could having health insurance be a cause of obesity? Obese people tend to suffer more medical problems and so incur higher medical costs. Obese people with health insurance that will reimburse them for only part of their medical bills, or who have no health insurance, must pay some or all of these higher medical bills themselves. People with health insurance that covers most of their medical bills will not suffer as large a monetary cost from being obese. In other words, by reducing some of the costs of obesity, health insurance may give people an economic incentive to gain weight.

At first glance, this argument may seem implausible. Some people suffer from medical conditions that can make physical activity difficult or that can cause weight gain even with moderate eating, so they may become obese, regardless of which type of health insurance they have. The people who are obese because of poor eating habits or lack of exercise probably don’t consider health insurance when deciding whether to have a slice of chocolate cake or to watch Netflix instead of going to the gym. But if economists are correct about the importance of economic incentives, then we would expect that if we hold all other personal characteristics—such as age, gender, and income—constant, people with health insurance will be more likely to be overweight than people without health insurance.

Jay Bhattacharya and Kate Bundorf of Stanford University, Noemi Pace of the University of Venice, and Neeraj Sood of the University of Southern California, have analyzed the effects of health insurance on weight. Using a sample that followed nearly 80,000 people from 1989 to 2004, they found that after controlling for factors including age, gender, income, education, and race, people with health insurance were significantly more likely to be overweight than people without health insurance. Having private health insurance increased BMI by 1.3 points. Having public health insurance, such as Medicaid, which is a program under which the government provides health care to low-income people, increased BMI by 2.3 points. These findings suggest that people respond to economic incentives even when making decisions about what they eat and how much they exercise.

Note: The exact formula for the body mass index is $BMI = (\text{Weight in pounds}/\text{Height in inches}^2) \times 703$.

Curtin, “Prevalence and Trends in Obesity among U.S. Adults, 1999–2008,” *Journal of the American Medical Association*, Vol. 303, No. 3, January 20, 2010, pp. 235–241; Jay Bhattacharya, Kate Bundorf, Noemi Pace, and Neeraj Sood, “Does Health Insurance Make You Fat?” in Michael Grossman and Naci H. Mocan, eds., *Economic Aspects of Obesity*, Chicago: University of Chicago Press, 2011; and Tara Parker-Pope, “Less Active at Work, Americans Have Packed on Pounds,” *New York Times*, May 25, 2011.

Your Turn: Test your understanding by doing related problems 1.7 and 1.8 on page 23 at the end of this chapter.

MyLab Economics [Study Plan](#)

Optimal Decisions Are Made at the Margin

Some decisions are “all or nothing.” For instance, when an entrepreneur decides whether to open a new restaurant, she starts the new restaurant or she doesn’t. When you decide whether to attend graduate school, you either enroll in graduate school or you don’t. But rather than being all or nothing, most decisions in life involve doing a little more or a little less. If you are trying to decrease your spending and increase your saving, the decision is not really between saving all the money you earn or spending it all. Rather, many small choices are involved, such as whether to buy a caffè mocha at Starbucks every day or just once a week.

Economists use the word *marginal* to mean “extra” or “additional.” Should you watch another hour of television or spend that hour studying? The *marginal benefit* (MB) of watching more television is the additional enjoyment you receive. The *marginal cost* (MC) is the reduction in your test score from having studied a little less. Should Apple produce an additional 300,000 iPhones? Firms receive *revenue* from selling goods. Apple’s marginal benefit is the additional revenue it receives from selling 300,000 more iPhones. Apple’s marginal cost is the additional cost—for wages, parts, and so forth—of producing 300,000 more iPhones. *Economists reason that the optimal decision is to continue any activity up to the point where the marginal benefit equals the marginal cost—that is, to the point where $MB = MC$.* Often we apply this rule without consciously thinking about it. Usually you will know whether the additional enjoyment from watching a television program is worth the additional cost you pay by not spending that hour studying without giving the decision a lot of thought. In business situations, however, firms often have to make careful calculations to determine, for example, whether the additional revenue received from increasing production is greater or less than the additional cost of the production. Economists refer to analysis that involves comparing marginal benefits and marginal costs as **marginal analysis**.

In each chapter, you will see the feature *Solved Problem*. This feature will increase your understanding of the material by leading you through the steps of solving an applied economic problem. After reading the problem, test your understanding by doing the related problems that appear at the end of the chapter. You can also complete Solved Problems on www.pearson.com/mylab/economics and receive tutorial help.

Marginal analysis Analysis that involves comparing marginal benefits and marginal costs.

The Marginal Benefit and Marginal Cost of Speed Limits

In an opinion column in the *New York Times*, economists Sendhil Mullainathan of Harvard University and Richard Thaler of the University of Chicago noted, “We do not post 10-mile-per-hour speed limits on all highways, even though that would be safer.” Why is a 10-mile-per-hour

speed limit unlikely to be optimal? How could a state highway department use marginal analysis to decide whether to increase the speed limit on a highway from 55 to 65 miles per hour?

Solving the Problem

Step 1: Review the chapter material. This problem is about making decisions, so you may want to review the section “Optimal Decisions Are Made at the Margin,” which appears on this page.

Step 2: Discuss how we can decide what the optimal speed limit is and why it is unlikely to be 10 miles per hour. The faster people drive, the more likely they are to have accidents because the less time they have to react to problems on the highway. In addition, the faster a car or truck is traveling, the more likely it is that an accident will cause damage to the vehicles involved and injuries to the vehicles' occupants. These are the main costs of increasing the speed limit. These costs will increase with each additional mile per hour the speed limit is increased. In other words, the marginal cost from increasing the speed limit is positive.

Increasing the speed limit has benefits as well. The higher the speed limit, the faster people and freight will reach their destinations. These benefits will increase with each additional mile per hour the speed limit is increased, so the marginal benefit from increasing the speed limit is positive. The optimal speed limit will be the one where the marginal cost of decreased safety equals the marginal benefit of faster travel. We know that we have reached the optimal speed limit when increasing the limit further would result in marginal cost being greater than marginal benefit.

A 10-mile-per-hour speed limit would result in very long travel times. So, we can reasonably conclude that a 10-mile-per-hour speed limit isn't optimal because the marginal benefit from increasing it is likely to be much greater than the marginal cost.

Step 3: Explain how a state highway department could use marginal analysis to decide whether to increase the speed limit on a highway from 55 to 65 miles per hour. Increasing the speed limit by 10 miles per hour will reduce travel times for people and freight—so there will be a marginal benefit—but will likely also increase the number of accidents and the damage from those accidents. The state highway department should try to estimate the dollar values of the marginal cost and marginal benefit of making the change. If the marginal benefit is greater than the marginal cost, the speed limit should be increased. Although it can be difficult to assign dollar values to the marginal benefit and marginal cost of an action, marginal analysis captures the steps you can follow to make optimal decisions in many situations.

Extra Credit: Suppose that the highway department calculates that increasing the speed limit will result in reduced travel time valued at \$100 million. This information would not be enough to decide that the speed limit should be raised because it represents only the marginal benefit from the higher speed limit. If the dollar value of more severe accidents from greater speed turns out to be \$125 million, then the marginal cost of increasing the speed limit would be greater than the marginal benefit, and the speed limit should not be raised. Marginal benefit and marginal cost both have to be considered in arriving at an optimal decision.

1.2

The Economic Problem That Every Society Must Solve

LEARNING OBJECTIVE: Discuss how an economy answers these questions:

What goods and services will be produced? How will the goods and services be produced? Who will receive the goods and services produced?

Because we live in a world of scarcity, any society faces the *economic problem* that it has only a limited amount of economic resources—such as workers, machines, and raw materials—and so can produce only a limited amount of goods and services. Therefore,

every society faces **trade-offs**: Producing more of one good or service means producing less of another good or service. The best measure of the cost of producing a good or service is the value of what has to be given up to produce it. The **opportunity cost** of any activity—such as producing a good or service—is the highest-valued alternative that must be given up to engage in that activity. The concept of opportunity cost is very important in economics and applies to individuals, firms, and society as a whole. For instance, suppose that you earn a salary of \$100,000 per year working as a manager for Ford. You decide to leave your job and open your own management consulting firm. In this case, the opportunity cost of the labor you supply to your own firm is the \$100,000 you give up by not working for Ford, *even if you do not explicitly pay yourself a salary*. As in this example, opportunity costs often do not involve actual payments of money.

Trade-offs force society to make choices when answering three fundamental questions:

1. *What* goods and services will be produced?
2. *How* will the goods and services be produced?
3. *Who* will receive the goods and services produced?

Throughout this book, we will return to these questions many times. For now, we briefly introduce each question.

What Goods and Services Will Be Produced?

How will society decide whether to produce more economics textbooks or more smartphones? More daycare facilities or more football stadiums? Of course, “society” doesn’t make decisions; only individuals make decisions. The answer to the question of what will be produced is determined by the choices that consumers and people working for firms or the government make. Every day, you help decide which goods and services firms will produce when you choose to buy an iPhone instead of a Samsung Galaxy or a caffè mocha rather than a chai tea. Similarly, managers at Apple must choose whether to devote the company’s scarce resources to making more iPhones or more smartwatches. Members of Congress and the president must choose whether to spend more of the federal government’s limited budget on breast cancer research or on repairing highways. In each case, consumers, managers of firms, and government policymakers face the problem of scarcity by trading off one good or service for another. And each choice made comes with an opportunity cost, measured by the value of the best alternative given up.

How Will the Goods and Services Be Produced?

Firms choose how to produce the goods and services they sell. In many cases, firms face a trade-off between using more workers and using more machines. For example, a local service station has to choose whether to provide car repair services using more diagnostic computers and fewer auto mechanics or fewer diagnostic computers and more auto mechanics. Similarly, movie studios have to choose whether to produce animated films using highly skilled animators to draw them by hand or fewer animators and more computers. In deciding whether to move production offshore to China, firms may need to choose between a production method in the United States that uses fewer workers and more machines and a production method in China that uses more workers and fewer machines.

Who Will Receive the Goods and Services Produced?

In the United States, who receives the goods and services produced depends largely on how income is distributed. The higher a person’s income, the more goods and services he or she can buy. Often, people are willing to give up some of their income—and, therefore, some of their ability to purchase goods and services—by donating to charities to increase the incomes of poorer people. Americans donate more than \$370 billion per year to charity, or an average donation of about \$2,900 for each household in the country. An important policy question, however, is whether the

Trade-off The idea that, because of scarcity, producing more of one good or service means producing less of another good or service.

Opportunity cost The highest-valued alternative that must be given up to engage in an activity.
