The Economics of Managerial Decisions

Roger D. Blair • Mark Rush

THE ECONOMICS OF MANAGERIAL DECISIONS

Prepare, Apply, Assess and Develop Employability Skills with MyLab Economics

83% 

of students said it helped them earn higher grades on homework, exams, or the course

MyLab™ Economics is an online homework, tutorial, and assessment program constructed to work with this text to engage students and improve results. It was designed to help students develop and assess the skills and applicable knowledge that they will need to succeed in their courses and their future careers.

See what students had to say about MyLab Economics:

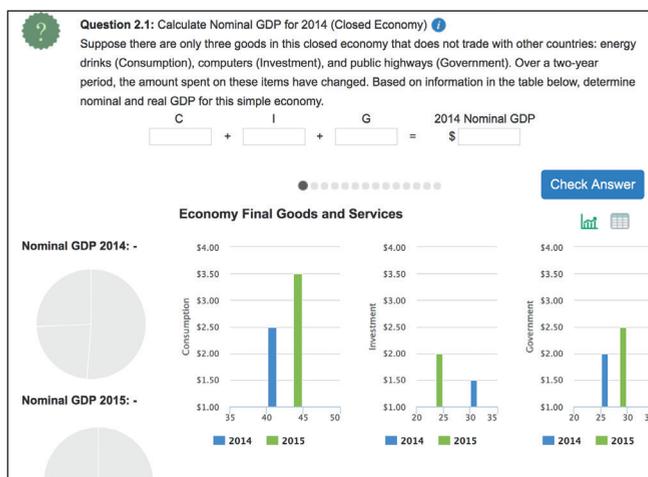

"Usually when I do homework myself and don't get it I am stuck, but [MyLab Economics] provided the tools necessary to help me learn how to work my way through the trickiest problems."

— Zainul Lughmani,
Binghamton University

*Source: 2016 Student Survey, n 10,263

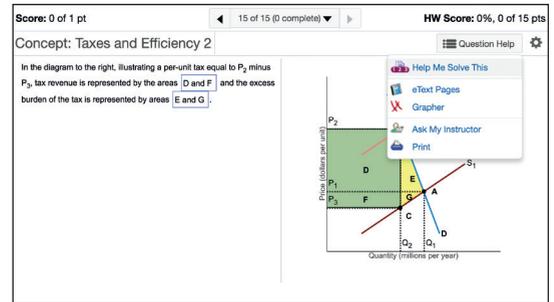

Digital Interactives

Economic principles are not static ideas, and learning them shouldn't be either! Digital Interactives are dynamic and engaging assessment activities that promote **critical thinking** and **application** of key economic principles.

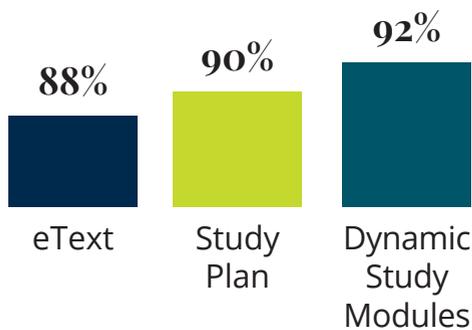

Question Help

MyLab Economics homework and practice questions are correlated to the textbook, and many generate algorithmically to give students unlimited opportunity for mastery of concepts. If students get stuck, Learning Aids including Help Me Solve This and eText Pages walk them through the problem and identify helpful information in the text, giving them assistance when they need it most.

"[MyLab Economics] provides ample practice and explanation of the concepts at hand."

— Heather Burkett, University of Nebraska at Omaha

% of students who found learning tool helpful

Dynamic Study Modules help students study chapter topics effectively on their own by continuously assessing their **knowledge application** and performance in real time. These are available as prebuilt Prepare assignments, and are accessible on smartphones, tablets, and computers.

Pearson eText enhances student learning—both in and outside the classroom. Worked examples, videos, and interactive tutorials bring learning to life, while algorithmic practice and self-assessment opportunities test students' understanding of the material. Accessible anytime, anywhere via MyLab or the app.

The **MyLab Gradebook** offers an easy way for students and instructors to view course performance. Item Analysis allows instructors to quickly see trends by analyzing details like the number of students who answered correctly/incorrectly, time on task, and median time spend on a question by question basis. And because it's correlated with the AACSB Standards, instructors can track students' progress toward outcomes that the organization has deemed important in preparing students to be **leaders**.

87% 

of students would tell their instructor to keep using MyLab Economics

ABOUT THE AUTHORS

Roger D. Blair is the Walter J. Matherly Professor and chair of economics at the University of Florida. He has been a visiting professor at the University of Hawaii and the University of California–Berkeley as well as Visiting Scholar in Residence, Center for the Study of American Business, Washington University. Professor Blair’s research centers on antitrust economics and policy. He has published 10 books and 200 journal articles. He has also served as an antitrust consultant to numerous corporations, including Intel, Anheuser-Busch, TracFone, Blue Cross–Blue Shield, Waste Management, Astellas Pharma, and many others.

Mark Rush is a professor of economics at the University of Florida. Prior to teaching at Florida, he was an assistant professor of economics at the University of Pittsburgh. He has spent eight months at the Kansas City Federal Reserve Bank as a Visiting Scholar. Professor Rush has taught MBA classes for many years and has won teaching awards for his classes. He has published in numerous professional journals, including the *Journal of Political Economy*; the *Journal of Monetary Economics*; the *Journal of Money, Credit, and Banking*; the *Journal of International Money and Finance*; and the *Journal of Labor Economics*.

2

Demand and Supply 71

Managers at Red Lobster Cope with Early Mortality Syndrome 71

Introduction 71

2.1 Demand 72

Law of Demand 72

Demand Curve 73

Factors That Change Demand 75

DECISION SNAPSHOT Demand for the Cadillac Escalade 79

Changes in Demand: Demand Function 79

SOLVED PROBLEM Demand for Lobster Dinners 81

2.2 Supply 82

Law of Supply 82

Supply Curve 82

Factors That Change Supply 84

Changes in Supply: Supply Function 87

SOLVED PROBLEM The Supply of Gasoline-Powered Cars and the Price of Hybrid Cars 88

2.3 Market Equilibrium 89

Equilibrium Price and Equilibrium Quantity 89

Demand and Supply Functions: Equilibrium 91

SOLVED PROBLEM Equilibrium Price and Quantity of Plush Toys 92

2.4 Competition and Society 92

Total Surplus 92

Consumer Surplus 96

Producer Surplus 97

SOLVED PROBLEM Total Surplus, Consumer Surplus, and Producer Surplus in the Webcam Market 98

2.5 Changes in Market Equilibrium 99

Use of the Demand and Supply Model When One Curve Shifts: Demand 99

Use of the Demand and Supply Model When One Curve Shifts: Supply 101

Use of the Demand and Supply Model When Both Curves Shift 102

Demand and Supply Functions: Changes in Market Equilibrium 106

SOLVED PROBLEM Demand and Supply for Tablets Both Change 108

2.6 Price Controls 108

Price Ceiling 108

Price Floor 110

SOLVED PROBLEM The Effectiveness of a Minimum Wage 112

2.7 Using the Demand and Supply Model 113

Predicting Your Costs 113

Predicting Your Price 114

Revisiting How Managers at Red Lobster Coped with Early Mortality Syndrome 116

Summary: The Bottom Line 116

APPLICATION

3

Measuring and Using Demand 124

Managers at the Gates Foundation Decide to Subsidize Antimalarial Drugs 124

Introduction 125

3.1 Regression: Estimating Demand 125

The Basics of Regression Analysis 126

Regression Analysis 127

Regression Results: Estimated Coefficients and Estimated Demand Curve 130

SOLVED PROBLEM Regression Analysis at Your Steak Chain 132

3.2 Interpreting the Results of Regression Analysis 132

Estimated Coefficients 132

Fit of the Regression 137

SOLVED PROBLEM Confidence Intervals and Predictions for the Demand for Doors 138

3.3 Limitations of Regression Analysis 139

Specification of the Regression Equation 139

Functional Form of the Regression Equation 140

SOLVED PROBLEM Which Regression to Use? 142

3.4 Elasticity 143

The Price Elasticity of Demand 143

DECISION SNAPSHOT Advertising and the Price Elasticity of Demand 155

Income Elasticity and Cross-Price Elasticity of Demand 155

SOLVED PROBLEM The Price Elasticity of Demand for a Touch-Screen Smartphone 157

MANAGERIAL APPLICATION

3.5 Regression Analysis and Elasticity 158

Using Regression Analysis 158

Using the Price Elasticity of Demand 160

Using the Income Elasticity of Demand Through the Business Cycle 160

Revisiting How Managers at the Gates Foundation Decided to Subsidize Antimalarial Drugs 161

Summary: The Bottom Line 161

Key Terms and Concepts 162

Solving Teaching and Learning Challenges

Students who enroll in the managerial economics course are typically not economics majors. They take the course with the goal of building skills that will help them become better managers in a variety of business settings, including small and large firms, nonprofit organizations, and public service. In teaching our classes, we often skipped theoretical, abstract coverage in existing books—such as indifference curves, isoquants, the Cobb–Douglas production function, the Rothschild Index, and the Lerner Index—because these topics are not useful to students pursuing careers in management. Based on our teaching experiences and feedback from many reviewers and class testers, we have omitted this sort of theoretical, abstract coverage from our book.

Our decision to omit these topics does not mean that we shortchange economic theory. On the contrary, our book and a wide range of media assets show students how economic theory and concepts—including opportunity cost, marginal analysis, and profit maximization—can provide important insights into real-world managerial challenges such as how to price a product, how many workers to hire, whether to expand production, and how much to spend on advertising. Applications and extensions of the core theory abound. Some of the topics include bundled pricing, vertical integration, resale price maintenance, industry-wide advertising, settlement of legal disputes, present value and investment decisions, auctions and optimal bidding, and optimal patent search. We focus on how to think critically and make decisions in real-world business situations—in other words, how to *apply* economic theory.

MyLab Economics

MyLab Economics is an online homework, tutorial, and assessment program that delivers technology-enhanced learning in tandem with printed textbooks and etexts. It improves results by helping students quickly grasp concepts and by providing educators with a robust set of tools to easily gauge and address the performance of individuals and classrooms.

The Study Plan provides personalized recommendations for each student, based on his or her ability to master the learning objectives in your course. This allows students to focus their study time by pinpointing the precise areas they need to review, and allowing them to use customized practice and learning aids—such as videos, eText, tutorials, and more—to keep them on track.

First-in-class content is delivered digitally to help every student master critical course concepts. MyLab Economics includes Auto-Graded Excel Projects and Digital Interactives to not only help students understand important economic concepts, but also help them learn how to apply these concepts in a variety of ways so they can see how they can use economics long after the last day of class.

MyLab Economics allows for easy and flexible assignment creation, so instructors can assign a variety of assignments tailored to meet their specific course needs.

Visit www.pearson.com/mylab/economics for more information on Auto-Graded Excel Projects, Digital Interactives, our LMS integration options, and course management options for any course of any size.

Chapter Features

The following key features and media assets demonstrate how *The Economics of Managerial Decisions* keeps the spotlight on the student as a future manager.

Real-world chapter openers and closers: Each chapter begins with a real-world example that piques student interest and poses a managerial decision-making question. We revisit this question and apply the chapter content to provide an answer at the end. Because students pursue careers in various fields, the chapter openers present challenges faced by a number of different types of organizations, including large and small profit-seeking firms, government organizations, nongovernmental organizations, and nonprofits.

Managers at the Gates Foundation Decide to Subsidize Antimalarial Drugs

The Bill and Melinda Gates Foundation (Gates Foundation) is the world's largest philanthropic organization, with a trust endowment of nearly \$40 billion. The foundation provides grants for education, medical research, and vaccinations around the world. As of 2015, the foundation had made total grants of \$37 billion. The goal of the Gates Foundation is not maximizing profit. Instead, its goal is to save lives and improve health in developing countries.

In 2010, the Global Fund to Fight AIDS, Tuberculosis and Malaria presented proposals to the Gates Foundation to subsidize antimalarial drugs in Kenya and other nations of sub-Saharan Africa. Although the Gates Foundation provides nearly \$4 billion in grants per year, there are more than \$4 billion worth of competing uses for its resources. Consequently, before the managers accepted these proposals, they needed to determine their expected impact: How many people would these projects save compared to alternative uses of the funds? The managers

realized that lives hinged on their decision, so they wanted to be certain that they were getting the most value for their money.

The proposed subsidy programs would lower the price patients pay for the drugs. As you learned in Chapter 2, according to the law of demand, a decrease in the price of a product increases the quantity demanded. Antimalarial drugs are no exception; if their price falls, more patients will buy them. To make the proper decision about the proposals, however, the foundation's managers needed a more quantitative estimate: Precisely how many additional patients would buy the drugs when their prices were lower?

This chapter explains how to answer this and other questions that require quantitative answers. At the end of the chapter, you will learn how the Gates Foundation's managers could forecast the number of patients they would help by subsidizing the drugs.

Revisiting How Managers at the Gates Foundation Decided to Subsidize Antimalarial Drugs

As noted at the beginning of the chapter, the managers at the Bill and Melinda Gates Foundation want to use their funds in the best way possible. Because wasting their resources means that people could die unnecessarily, managers at the foundation want to fund the most cost-effective programs. To achieve that goal, they must determine the quantitative impact of the proposals presented to them.

In the case of the proposals to subsidize antimalarial drugs in Kenya and other nations, the managers were unlikely to have an estimated demand curve for the drugs in these countries because of data limitations. Instead, they probably relied on estimates of the price elasticity of demand to determine the increase in the quantity of drugs demanded.

The subsidy programs lowered the price of these drugs between 29 percent and 78 percent (the fall in price differed from nation to nation and from drug to drug). Overall, the average decrease in price was roughly 50 percent. Because there are few substitutes, the demand for pharmaceutical drugs is price inelastic. The price elasticity of demand for pharmaceutical drugs for low-income Danish consumers is estimated to be 0.31. Denmark and

Kenya differ in an important respect: Low-income consumers in Kenya have much lower incomes than their counterparts in Denmark. Consequently, the expenditure on drugs in Kenya is a much larger fraction of consumers' income, which means that the price elasticity of demand for drugs in Kenya is larger than in Denmark. If the managers at the Bill and Melinda Gates Foundation estimated that the price elasticity of demand for drugs in Kenya was about twice that in Denmark—say, 0.60—they could then predict that lowering the price of the drugs by 50 percent would increase the quantity demanded by $50 \text{ percent} \times 0.60 = 30 \text{ percent}$.

The Gates Foundation funded the proposals to subsidize antimalarial drugs. The actual outcome was that the quantity of the drugs demanded in the different nations increased by 20 to 40 percent. The quantitative estimate was right in line with what occurred. Using the price elasticity of demand to estimate the impact of the drug subsidy proposals allowed the managers at the foundation to compare them to competing proposals and to make decisions that saved the maximum number of lives.
