Welcome W-1

## Chapter 1

### The Anatomy of Medical Terms: *The Essential Elements of the Language of Medicine* 1

#### Lesson 1.1

The Construction of Medical Words 2  
Roots 2  
Combining Forms 2  
Suffixes 4  
Prefixes 6

#### Lesson 1.2

Word Deconstruction, Plurals, Pronunciation, and Precision 8  
Word Deconstruction 8  
Plurals 10  
Pronunciation 10  
Precision in Communication 12

## Chapter 2

### The Body as a Whole: *The Essentials of the Language of Anatomy* 15

#### Lesson 2.1

Composition of Body and Cells 16  
Composition of the Body 16  
The Cell 16  
Structure and Function of Cells 18

#### Lesson 2.2

Tissues, Organs, and Organ Systems 20  
Tissues 20  
Connective Tissues 22  
Organs and Organ Systems 24

#### Lesson 2.3

Anatomical Positions, Planes, and Directions 26  
Fundamental Anatomical Position 26  
Anatomical Directional Terms 26  
Anatomical Planes 26  
Abdominal Quadrants 28  
Body Cavities 28

## Chapter 3

### The Integumentary System: *The Essentials of the Language of Dermatology* 31

#### Lesson 3.1

- Functions and Structure of the Skin 32
- Functions of the Skin 32
- Structure of the Skin 34

#### Lesson 3.2

- Disorders of the Skin 36
- Dermatitis 36
- Skin Cancers 38
- Pressure Ulcers 38
- Congenital Lesions 38
- Infections of the Skin 38
- Viral Infections 38
- Fungal Infections 40
- Parasitic Infestations 40
- Bacterial Infections 40
- Collagen Diseases 42
- Other Skin Diseases 42
- Skin Manifestations of Internal Disease 42

#### Lesson 3.3

- Accessory Skin Organs 44
- Hair Follicles and Sebaceous Glands 44
- Accessory Skin Organs 46

#### Lesson 3.4

- Diagnosis and Treatment of Skin Disorders 48
- Diagnostic Procedures 48
- Therapeutic Methods and Pharmacologic Agents 48

#### Lesson 3.5

- Burns and Injuries to the Skin 50
- Burns 50
- Aging in Skin 52
- Wounds and Tissue Repair 54

## Chapter 4

### The Skeletal System: *The Essentials of the Language of Orthopedics* 57

#### Lesson 4.1

- Bones of the Skeletal System 58
- Tissues and Functions of the Skeletal System 58
- Bones 60
- Diseases of Bone 62
- Bone Fractures (FXs) 64

#### Lesson 4.2

- Axial Skeleton 66
- Structure of the Axial Skeleton 66
- Skull and Face 68

#### Lesson 4.3

- Bones and Joints of the Shoulder Girdle and Upper Limb 70
- Shoulder Girdle 70
- Upper Arm and Elbow Joint 72
- Forearm, Wrist, and Hand 74

#### Lesson 4.4

- Pelvic Girdle and Lower Limb 76
- The Pelvic Girdle 76
- Disorders of the Pelvic Girdle 78
- Bones and Joints of the Hip and Thigh 80
- The Knee Joint 82
- Bones and Joints of the Lower Leg, Ankle, and Foot 86

#### Lesson 4.5

- Diagnostic and Therapeutic Procedures for Bone Disorders 88
- Diagnostic Procedures for Metabolic Bone Disorders 88
- Diagnostic Procedures for Bone Cancer 88
- Therapeutic Procedures for Bone Disorders 88

## Chapter 5

### Muscles and Tendons: *The Essentials of the Languages of Orthopedics and Rehabilitation* 91

#### Lesson 5.1

- Muscles and Tendons 92
- Types of Muscles 92
- Functions and Structure of Skeletal Muscle 92
- Structure of Skeletal Muscle 94
- Disorders of Skeletal Muscles 94
- Diagnostic Methods for Disorders of Muscles and Tendons 96
- Therapeutic Methods of Disorders of Muscles and Tendons 96

#### Lesson 5.2

- Muscles and Tendons of the Shoulder Girdle, Trunk, and Upper Limb 98
- Shoulder Girdle 98
- Upper Arm and Elbow Joint 100
- Forearm, Wrist, and Hand 100

#### Lesson 5.3

- Pelvic Girdle, Thigh, Leg, and Foot 102
- Muscles of the Hip and Thigh 102
- Muscles and Tendons of the Lower Leg, Ankle, and Foot 102

#### Lesson 5.4

- Physical Medicine and Rehabilitation (PM&R) 104
- Physical Medicine and Rehabilitation (PM&R) 104
- Stroke Rehabilitation 104
- Rehabilitation Definitions 106
- Amputations 106

## Chapter 6

### The Cardiovascular and Circulatory Systems: *The Essentials of the Language of Cardiology* 109

#### Lesson 6.1

- The Heart 110
- Location of the Heart 110
- Functions and Structure of the Heart 112
- Blood Flow through the Heart 114
- The Heartbeat 116

#### Lesson 6.2

- Disorders of the Heart 118
- Disorders of the Heart 118
- Cardiologic Investigations and Procedures 126

#### Lesson 6.3

- Circulatory Systems 130
- Circulatory System 132

## Chapter 7

### The Blood, Lymphatic, and Immune Systems: *The Essentials of the Languages of Hematology and Immunology* 137

#### Lesson 7.1

- Components and Functions of Blood 138
- Components of Blood 138
- Functions of Blood 140
- Structures, Functions, and Disorders of Red Blood Cells (Erythrocytes) 140
- Types and Functions of White Blood Cells (Leukocytes) 142
- Hemostasis 144
- Blood Groups and Transfusions 146
- Diagnostic Procedures for Blood Disorders 150
- Therapeutic Procedures for Blood Disorders 150

#### Lesson 7.2

- Lymphatic System 152
- Lymphatic System 152
- Lymphatic Tissues and Cells 156
- Lymphatic Organs 156
- Disorders of the Lymphatic System 158

#### Lesson 7.3

- Immune System 160
- The Immune System 160
- Immunity 162
- Disorders of the Immune System 164
- Infection 166

## Chapter 8

### The Respiratory System: *The Essentials of the Language of Pulmonology* 169

#### Introduction to the Respiratory System 170

#### Lesson 8.1

- Upper Respiratory Tract 172
- The Nose 172
- The Pharynx 174
- The Larynx 176

#### Lesson 8.2

- Lower Respiratory Tract 178
- Trachea 178
- The Lungs 178
- Tracheobronchial Tree 178

- Mechanics of Respiration 180
- Common Signs and Symptoms of Respiratory Disorders 180
- Disorders of the Lower Respiratory Tract 182

#### Lesson 8.3

- Diagnostic and Therapeutic Procedures 186
- Diagnostic Procedures 186
- Therapeutic Procedures 188

## Chapter 9

### The Digestive System: *The Essentials of the Language of Gastroenterology* 191

#### Lesson 9.1

The Digestive System 192  
Alimentary Canal and Accessory Organs 192  
Actions and Functions of the Digestive System 194

#### Lesson 9.2

Mouth, Pharynx, and Esophagus 196  
The Mouth and Mastication 196  
Disorders of the Mouth 198  
Esophagus 200

#### Lesson 9.3

Digestion—Stomach and Small Intestine 202  
Digestion: The Stomach 202  
Disorders of the Stomach 204  
Small Intestine 204  
Disorders of the Small Intestine 206

#### Lesson 9.4

Digestion—Liver, Gallbladder, and Pancreas 208

The Liver 208  
Gallbladder, Biliary Tract, and Pancreas 210  
The Pancreas 210

#### Lesson 9.5

Absorption and Malabsorption 212  
Chemical Digestion, Absorption, and Transport 212  
Disorders of Malabsorption 214

#### Lesson 9.6

The Large Intestine and Elimination 216  
Structure and Functions of the Large Intestine 216  
Disorders of the Large Intestine and Anal Canal 218  
Diagnostic and Therapeutic Procedures 220

## Chapter 10

### The Nervous System and Mental Health: *The Essentials of the Languages of Neurology and Psychiatry* 223

#### Lesson 10.1

Structure and Functions of the Nervous System 224  
Structure of the Nervous System 224  
Functions of the Nervous System 226  
Cells of the Nervous System 226

#### Lesson 10.2

The Brain and Cranial Nerves 228  
The Brain 228  
Cranial Nerves, Spinal Cord, and Meninges 230

#### Lesson 10.3

Disorders of the Brain, Cranial Nerves, and Meninges 232  
Disorders of the Brain 232  
Traumatic Brain Injury (TBI) 238  
Disorders of the Meninges 238  
Disorders of the Cranial Nerves 238  
Pain Management 238

#### Lesson 10.4

Disorders of the Spinal Cord and Peripheral Nerves 240

Disorders of the Myelin Sheath of Nerve Fibers 240  
Disorders of the Spinal Cord 242  
Disorders of Peripheral Nerves 242  
Congenital Anomalies of the Nervous System 244  
Cerebral Palsy 244  
Diagnostic Procedures in Neurology 246

#### Lesson 10.5

Mental Health 248  
Mental Health Definitions 248  
Psychosis and Schizophrenia 248  
Mood Disorders 250  
Anxiety Disorders 250  
Personality Disorders 252  
Substance Abuse and Chemical Dependence 252  
Pharmacology of the Nervous System 254

---

## Chapter 11

### Special Senses of the Eye and Ear: *The Essentials of the Languages of Ophthalmology and Otology* 257

#### Lesson 11.1

Accessory Structures of the Eye 258  
Disorders of the Accessory Glands 260  
Extrinsic Muscles of the Eye 262

#### Lesson 11.2

The Eyeball and Seeing 264  
The Eyeball (Globe) 264  
Refraction 268

#### Lesson 11.3

Disorders of the Eye and Ophthalmic  
Procedures 270  
Disorders of the Anterior Eyeball 270

Disorders of the Retina 272  
Ophthalmic Diagnostic  
Procedures 274  
Ophthalmic Pharmacology 276

#### Lesson 11.4

The Ear and Hearing 280  
External Ear 282  
Middle Ear 284  
Disorders of the Middle Ear 286  
Inner Ear for Hearing 288  
Inner Ear for Equilibrium and  
Balance 290

---

## Chapter 12

### The Endocrine System: *The Essentials of the Language of Endocrinology* 293

#### Lesson 12.1

Endocrine System, Hypothalamus,  
and Pituitary and Pineal  
Glands 294  
The Endocrine System 294  
Pituitary Gland 296

#### Lesson 12.2

Thyroid, Parathyroid, and Thymus  
Glands 298  
Thyroid Gland 298  
Parathyroid Glands 298  
Thymus Gland 298

Disorders of the Thyroid and Parathyroid  
Glands 300

#### Lesson 12.3

Adrenal Glands and Hormones 302  
Adrenal Glands 302

#### Lesson 12.4

The Pancreas 304  
The Pancreas 304  
Diabetes Mellitus (DM) 306

---

## Chapter 13

### The Urinary System: *The Essentials of the Language of Urology* 311

#### Lesson 13.1

Urinary System, Kidneys, and  
Ureters 312  
Urinary System 312  
The Kidneys 312  
Disorders of the Kidneys 314  
The Ureters 318

#### Lesson 13.2

Urinary Bladder and Urethra 320  
The Urinary Bladder and Urethra 320  
Disorders of the Urinary Bladder and  
Urethra 322  
Diagnostic Procedures 324  
Urinary Tract Pharmacology 326

## Chapter 14

### The Male Reproductive System: *The Essentials of the Language of the Male Reproductive System* 329

#### Lesson 14.1

The Male Reproductive System 330  
Male Reproductive System 330  
Testes and Spermatic Cord 332  
Disorders of the Testes 334

#### Lesson 14.2

Spermatic Ducts, Accessory Glands,  
and Penis 336

Spermatic Ducts 336  
Accessory Glands 336  
Disorders of the Prostate  
Gland 338  
Male Infertility 338  
Penis 340  
Sexually Transmitted Diseases  
(STDs) 342

## Chapter 15

### The Female Reproductive System: *The Essentials of the Languages of Gynecology and Obstetrics* 345

#### Lesson 15.1

External Genitalia and Vagina 346  
External Genitalia 346  
Vagina 348  
Disorders of the Vulva and Vagina 348

#### Lesson 15.2

Ovaries, Fallopian (Uterine) Tubes,  
and Uterus 350  
Anatomy of the Female Reproductive  
Tract 350

#### Lesson 15.3

Disorders of the Female Reproductive  
Tract 354

Disorders of the Ovaries 354  
Menopause 358  
Female Infertility and Contraception 360

#### Lesson 15.4

Pregnancy 362  
Conception and Development 362  
Disorders of Pregnancy 366  
Childbirth 368  
Disorders of Childbirth 370

#### Lesson 15.5

The Female Breast 372  
The Breast 372  
Disorders of the Breast 374

## Chapter 16

### Infancy to Old Age: *The Languages of Pediatrics and Geriatrics* Available in Connect

#### Lesson 16.1

Neonatal Period  
Neonatal Adaptations  
Developmental Disorders of Childhood  
and Adolescence

#### Lesson 16.2

Aging, Senescence, and Death  
Senescence of Organ Systems  
Dying and Death

Appendix A: Word Parts and Abbreviations 377  
Appendix B: Diagnostic and Therapeutic Procedures 403  
Appendix C: Pharmacology 409  
Glossary 413  
Credits 449  
Index 451

## WHAT HELPS STUDENTS LEARN MEDICAL TERMINOLOGY

THIS TEXTBOOK INCORPORATES FEATURES DESIGNED TO ADDRESS THESE FOUR FACTORS:

Motivation to learn	→	In order for students to be motivated to learn, what they are learning must be meaningful and relevant. To ensure the chapters in <i>Essentials of Medical Language</i> fit these criteria, the student is asked to step into the role of an allied health professional in each chapter. Authentic patient cases are used to illustrate how medical language is used on the job.
Retention of the material	→	When students encounter new medical terms within the context of a patient case, they are able to remember it more effectively. In addition, each chapter presents medical terms from one body system or medical specialty, which further serves to “tie it all together” to help students retain the knowledge and skills.
Opportunities for application and practice	→	Practice makes perfect. This is especially true for learning medical terminology. This textbook provides many opportunities for students to apply what they are learning. Exercises are included in the lessons, and are available in Connect for practice. Chapter review questions are also included in Connect to reinforce students’ mastery of the terminology in each chapter.
Readily available information	→	In this book, all the information needed for a specific topic is presented in self-contained two-page spreads. On the left-hand page, new medical terms are introduced. On the right-hand page, for each new term, the pronunciation, color-coded word elements, and definition are provided in a <i>Word Analysis and Definition (WAD) Table</i> .

*Essentials of Medical Language* will help you learn the terminology and language of modern health care in a way that bridges the gap between the classroom and a clinical setting.

### RELEVANT MATERIALS—YOUR MOTIVATION TO LEARN!

*Essentials of Medical Language 3e* provides you with terminology, exercises, images and examples you can apply to other courses and within your career. You will step into the role of a health professional in every chapter and experience medical language illustrated through authentic patient cases.

### BODY SYSTEMS AND MEDICAL SPECIALTIES—REMEMBER AND APPLY THE MATERIAL!

Encountering new medical terms within the context of each patient case will help you remember them more effectively. Every chapter presents medical terms from one body system or medical specialty, which helps tie it all together!

### APPLICATION AND PRACTICE—YOUR KEY TO MASTERING MEDICAL TERMINOLOGY!

Practice makes perfect, especially when you are learning medical terminology. You will have plenty of opportunity to apply what you learn through exercises during the lessons and at the end of every chapter. Additional practice opportunities and exercises are available through LearnSmart and Connect (see pages xv and xiv).

## TO THE INSTRUCTOR

McGraw-Hill Education knows how much effort it takes to prepare for a new course. Through focus groups, symposia, reviews, and conversations with instructors like you, we have gathered information about what materials you need in order to facilitate successful courses. We are committed to providing you with high-quality, accurate instructor support.

## MEETING YOUR NEEDS

### New to This Edition!

1. The third edition contains 120 fewer text pages than the previous edition. This has been achieved by focusing on essential terms, disorders, and procedures and by changing the layout of the text on each page.
2. The book's artwork has been updated with 40 new figures and labeling has been reduced to allow greater focus on the terms.
3. Each body system chapter includes new sections on diagnostic and therapeutic procedures and coverage of pharmacological terms.
4. More word construction and deconstruction exercises have been added to the Test Bank in *Connect*.
5. The learning outcomes have been revised and updated.
6. The learning outcomes have been tagged numerically and related to all questions in the Test Bank and to the exercises and activities in *Connect*.
7. The learning outcomes have been mapped to the content, with lessons and topics within the lessons in each chapter directly correlated to the outcome it satisfies.
8. The Word Analysis and Definition (WAD) tables and review exercises have been updated and expanded.
9. The contextual Case Reports have been emphasized within well-defined boxes. Each spread with a Case Report includes exercises that review the Case Report.
10. The exercises in the Test Bank move from easy to more difficult based on Bloom's taxonomy.

When you use *Essentials of Medical Language*, you will be supported at every point in the program. Each chapter in the book is broken down into lessons, and the Instructor's Manual provides lesson plans and additional materials for each lesson. Following are features of the textbook designed to address student needs.

### Lesson-Based Approach

Each chapter of *Essentials of Medical Language* is divided into lessons covering different aspects of the overall chapter subject. Lessons within a chapter break down into topics. Each topic is designed so your students will not have to flip back and forth when completing exercises or looking at figures, tables, and boxes. All main concepts and ideas presented in topics begin and end within a two-page "spread." These spreads help learning flow smoothly by ensuring that valuable class and reading time is not wasted on flipping pages.

### You Are . . . Your Patient Is . . . Case Scenarios

Each chapter and most lessons begin by immediately placing your students in the role of an allied health professional faced with a situation in which medical communication is necessary. Many different professional allied health and LPN-level nursing roles are utilized so your students can "experience" various specialties and positions. The patient cases introduced at the beginning of the chapters and lessons are referenced throughout the lessons to further unify the students' experience.

### Chapter Outcomes and Lesson Objectives

The major learning outcomes for each chapter are presented in the beginning so you and your students can focus on what they need to know and be able to do by the end of the chapter. Each lesson has outcome-based learning objectives. Accomplishing each lesson's objectives helps ensure students will be able to achieve the chapter outcomes and, ultimately, the goal of the textbook: to help them learn the essential terminology and language of modern health care.

### Word Analysis and Definition Tables (WAD)

Each lesson contains tables listing important medical terms and their pronunciation, elements, and definition. Prefixes, suffixes, and combining forms are color-coded. These tables provide your students with an at-a-glance view of the terms covered. The tables are excellent for reference as well as for studying and reviewing.

### Exercises

In addition to the exercises at the end of topic areas in the book, the chapter review exercises are included in the Test Bank in *Connect* (<http://connect.mheducation.com>). All these exercises are graded in their difficulty according to Bloom's Taxonomy and are tied to Chapter Learning Outcomes.

Attention is given to developing skills in spelling, forming plurals, using accepted abbreviations, writing medical language, and pronunciation. The exercises take the learner beyond memorization and teach how to think critically about the realistic application of the medical language being learned.

## A ONE-STOP SPOT TO PRESENT, DELIVER, AND ASSESS DIGITAL ASSETS AVAILABLE FROM MCGRAW-HILL: MCGRAW-HILL ESSENTIALS OF MEDICAL TERMINOLOGY

**McGraw-Hill Connect® Essentials of Medical Terminology** provides online presentation, assignment, and assessment solutions. It connects your students with the tools and resources they'll need to achieve success. With Connect, you can deliver assignments, quizzes, and tests online. A robust set of questions and activities, including all of the lesson and end-of-chapter exercises, case studies, animation questions, and interactives, are presented and aligned with the textbook's learning outcomes. As an instructor, you can edit existing questions and author entirely new problems. Connect enables you to track individual student performance—by question, by assignment, or in relation to the class overall—with detailed grade reports. You can integrate grade reports easily with learning management systems (LMSs), such as Blackboard, Desire2Learn, and eCollege, plus much more.

**Connect Essentials of Medical Terminology** also provides students with 24/7 online access to an ebook. This media-rich version of the textbook is available through the McGraw-Hill Connect platform and allows seamless integration of text, media, and assessments. To learn more, visit <http://connect.mheducation.com>.

**Connect Insight™** is the first and only analytics tool of its kind, which highlights a series of visual data displays—each framed by an intuitive question—to provide at-a-glance information regarding how your class is doing. As an instructor or administrator, you receive an instant, at-a-glance view of student performance matched with student activity. It puts real-time analytics in your hands so you can take action early and keep struggling students from falling behind. It also allows you to be empowered with a more valuable, transparent, and productive connection between you and your students. Available on demand wherever and whenever it's needed, Connect Insight travels from office to classroom!

## A SINGLE SIGN-ON WITH CONNECT AND YOUR BLACKBOARD COURSE: MCGRAW-HILL EDUCATION AND BLACKBOARD

**Blackboard**, the Web-based course management system, has partnered with McGraw-Hill Education to better allow students and faculty to use online materials and activities to complement face-to-face teaching. Blackboard features exciting social learning and teaching tools that foster active learning opportunities for students. You'll transform your closed-door classroom into communities where students remain connected to their educational experience 24 hours a day. This partnership allows you and your students access to McGraw-Hill's Connect and Create right from within your Blackboard course—all with a single sign-on. Not only do you get single sign-on with Connect and Create, but you also get deep integration of McGraw-Hill Education content and content engines right in Blackboard. Whether you're choosing a book for your course or building *Connect* assignments, all the tools you need are right where you want them—inside Blackboard. Gradebooks are now seamless. When a student completes an integrated Connect assignment, the grade for that assignment automatically (and instantly) feeds into your Blackboard grade center. McGraw-Hill Education and Blackboard can now offer you easy access to industry-leading technology and content, whether your campus hosts it or we do. Be sure to ask your local McGraw-Hill Education representative for details. *Still want a single sign-on solution using another learning management system?* See how **McGraw-Hill Compus®** (<http://mhcampus.mhhe.com/>) makes the grade by offering universal sign-on, automatic registration, gradebook synchronization, and open access to a multitude of learning resources—all in one place. MH Campus supports Active Directory, Angel, Blackboard, Canvas, Desire2Learn, eCollege, IMS, LDAP, Moodle, Moodlerooms, Sakai, Shibboleth, WebCT, Brain-Honey, Campus Cruiser, and Jenzibar eRacer. Additionally, MH Campus can be easily connected with other authentication authorities and LMSs.

## CREATE A TEXTBOOK ORGANIZED THE WAY YOU TEACH: MCGRAW-HILL CREATE

With **McGraw-Hill Create™**, you can easily rearrange chapters, combine material from other content sources, and quickly upload content you have written, such as your course syllabus or teaching notes. Find the content you need in Create by searching through thousands of leading McGraw-Hill Education textbooks. Arrange your book to fit your teaching style. Create even allows you to personalize your book's

appearance by selecting the cover and adding your name, school, and course information. Order a Create book and you'll receive a complimentary print review copy in three to five business days or a complimentary electronic review copy (eComp) via e-mail in minutes. Go to [www.mcgrawhillcreate.com](http://www.mcgrawhillcreate.com) today and register to experience how McGraw-Hill Create empowers you to teach *your* students *your* way.

### RECORD AND DISTRIBUTE YOUR LECTURES FOR MULTIPLE VIEWING: MY LECTURES—TEGRITY

**McGraw-Hill Tegrity**<sup>®</sup> records and distributes your class lecture with just a click of a button. Students can view it anytime and anywhere via computer, iPod, or mobile device. It indexes as it records your PowerPoint presentations and anything shown on your computer, so students can use keywords to find exactly what they want to study. Tegrity is available as an integrated feature of **McGraw-Hill Essentials of Medical Terminology** and as a stand-alone product.

### MCGRAW-HILL EDUCATION'S ADAPTIVE SUITE

New from McGraw-Hill Education, LearnSmart Advantage<sup>®</sup> is a series of adaptive learning products fueled by LearnSmart. Since 2009, it has been the most widely used and intelligent adaptive learning resource proven to improve learning. Developed to deliver demonstrable results in boosting grades, increasing course retention, and strengthening memory recall, the LearnSmart Advantage series spans the entire learning process from course preparation to providing the first adaptive reading experience, and it's found only in SmartBook. Distinguishing what students know from what they don't, and honing in on concepts they are most likely to forget, each product in the series helps students study smarter and retain more knowledge. A smarter learning experience for students coupled with valuable reporting tools for instructors, and available in hundreds of course areas, LearnSmart Advantage is advancing learning like no other products in higher education today. Go to [www.LearnSmartAdvantage.com](http://www.LearnSmartAdvantage.com) for more information.

LearnSmart<sup>®</sup> is one of the most effective and successful adaptive learning resources available on the market today and is again available for *Essentials of Medical Terminology*. More than 2 million students have answered more than 1.3 billion questions in LearnSmart since 2009, making it the most widely used and intelligent adaptive study tool. It has proven to strengthen memory recall, keep students in class, and boost grades. Students using LearnSmart are 13% more likely to pass their classes and 35% less likely to drop out. This revolutionary learning resource is available only from McGraw-Hill Education, so join the learning revolution, and start using LearnSmart today!

SmartBook<sup>®</sup> is the first and only adaptive reading experience currently available. SmartBook personalizes content for each student in a continuously adapting reading experience. Reading is no longer a passive and linear experience, but an engaging and dynamic one where students are more likely to master and retain important concepts, thus coming to class better prepared. Valuable reports provide instructors with insight into how students are progressing through textbook content, and are useful for shaping in-class time and assessments. As a result of the adaptive reading experience found in SmartBook, students are more likely to retain knowledge, stay in class, and get better grades. This revolutionary technology is available only from McGraw-Hill Education for hundreds of course areas as part of the LearnSmart Advantage series.

## Instructors' Resources

The Instructor Online Learning Center is available through your Connect course. Your McGraw-Hill sales representative can provide you with the access you need to easily prepare for using *Essentials of Medical Language*, 3e. Our Online Learning Centers include:

- The Instructors' Manual, which contains valuable information that makes course prep a snap!
  - This manual includes information about student learning styles and instructor strategies; innovative learning activities; assessment techniques and strategies; classroom management tips; and answer keys.
  - **Lesson Planning Guide.** Our Lesson Planning Guide comes complete with a customizable lesson plan for each of the lessons in this text. Each plan contains a step-by-step 50-minute teaching plan

and master copies of handouts. Use these lessons alone or combined to accommodate different class schedules—you can even revise them to reflect your preferred topic or sequence. Each lesson plan is designed to be used with a corresponding PowerPoint® presentation that is also available on the OLC.

- **PowerPoint® Lecture Outlines.** The PowerPoint lectures with speaking notes correlate to the Lesson Plans mentioned above and include the art and photos from the text. Covering the most important parts of every lesson, the slides are customizable to fit your course needs.
- **McGraw-Hill's EZ-Test Generator**, which makes creating tests easy!
  - This flexible electronic testing program allows instructors to create tests correlated to every chapter and learning outcome. Accommodating a variety of question types tied to Bloom's taxonomy, EZ-Test allows instructors to create multiple versions of the tests and then export to a course management system, such as Blackboard. EZ-Test Online gives you a place online to quickly and easily administer the exams you create.

## Contextual Approach Promotes Active Learning

Chapters in the textbook are organized by body system in accordance with an overall anatomy and physiology (A & P) approach. Lessons introduce and define terminology through the context of A & P, pathology, and clinical and diagnostic procedures/tests. The organization of the body systems into chapters is based on an “outside to inside” sequence that reflects a physician’s differential diagnosis method used during an examination.

To provide students with an authentic context, the medical specialty associated with each body area or system is introduced along with relevant anatomy and physiology. Students actually step into the role of an allied health professional associated with each specialty. Patient cases and documentation are used to illustrate the real-life application of medical terminology in modern health care: to care for and communicate with patients and to interact with other members of the health care team.

The A & P organizational approach, used in conjunction with an authentic medical setting and patient cases, encourages student motivation and facilitates active, engaged learning.

## Innovative Pedagogical Aids Provide a Coherent Learning Program

Each chapter is structured around a consistent and unique framework of pedagogic devices. No matter what the subject matter of a chapter, the structure enables students to develop a consistent learning strategy, making *Essentials of Medical Language* a superior learning tool.

## YOU ARE COMMUNICATING WITH . . .

Each chapter opens by placing the student in the role of an allied health professional related to the specialty and associated body systems/areas covered by the chapter. The student is also introduced to a patient and given information about the patient’s case.

# Muscles and Tendons

The Essentials of the Languages of  
Orthopedics and Rehabilitation

CHAPTER

# 5

Case Report 5.1

**You are . . .**  
 . . . an orthopedic technologist working with orthopedist Kenneth Stannard, MD, in Fulwood Medical Center.

**You are Communicating with . . .**  
 Mr. Bruce Adams, a 55-year-old construction worker who presents with severe pain in his right shoulder. Mr. Adams’ pain began 3 or 4 months ago; it is worse at the end of the workday and when he lifts his arm above his head. During the past week, the pain has woken him from sleep. Mr. Adams’ primary care physician has given him pain medication, advised him to stop working, and referred him to Dr. Stannard for diagnosis and treatment. A physical examination shows that Mr. Adams’ pain is noticeably limiting all the passive and active movements of his right shoulder, including his ability to lift weight.

**Learning Outcomes**

The **appendicular skeleton**, which includes the bones of the upper and lower limbs, is attached to the **axial skeleton** through joints and muscles. Understanding the terminology that identifies and describes the muscles and tendons of the limbs and trunk is vital to your knowledge of the human body. Information in this chapter provides correct medical terminology to:

- LO 5.1** Use **roots, combining forms, suffixes, and prefixes** to construct and analyze (deconstruct) medical terms related to muscles and tendons and rehabilitation medicine.
- LO 5.2** Spell and pronounce correctly medical terms related to muscles and tendons and rehabilitation medicine in order to communicate them with accuracy and precision in any health care setting.
- LO 5.3** Define accepted abbreviations related to muscles and tendons and rehabilitation medicine.
- LO 5.4** Relate the three different types of muscle to their structures, functions, and disorders.
- LO 5.5** Identify diagnostic and therapeutic methods for disorders of the muscles and tendons.
- LO 5.6** Describe the muscles and tendons of the trunk, shoulder girdle, and upper limbs and their disorders.
- LO 5.7** Describe the muscles and tendons of the pelvic girdle and lower limbs and their disorders.
- LO 5.8** Identify the goals of rehabilitation medicine and the health professionals involved in a rehabilitation program.
- LO 5.9** Apply your knowledge of the medical terms of the muscles and tendons, their disorders and rehabilitation medicine to documentation, medical records, and medical reports.
- LO 5.10** Translate the medical terms of the muscles and tendons and their disorders and rehabilitation medicine into everyday language in order to communicate clearly with patients and their families.

## LEARNING OUTCOMES

At the same time, **Learning Outcomes** are presented to let students know what they will learn in the chapter. This technique immediately engages students, motivating them to read on to learn how this patient’s case (and their role in the patient’s care) relates to the medical terminology being introduced in the chapter.

# LESSON-BASED ORGANIZATION

The chapter content is broken down into chunks, or lessons, to help students digest new information and relate it to previously learned information. Rather than containing many various topics within a chapter, these lessons group the chapter material into logical, streamlined learning units designed to help students achieve the chapter outcomes. Lessons within a chapter build on one another to form a cohesive, coherent experience for the learner.

Each lesson is based on specific **Lesson Objectives** designed to support the students' achievement of the overall chapter outcomes.

Each lesson in a chapter contains an Introduction, Lesson Objectives, Lesson Topics, Word Analysis and Definition Tables, and Lesson Exercises. Within each lesson, all topics and information are presented in **self-contained two-page spreads**. This means students will no longer have to flip back and forth to see figures on one page that are described on another.

**Objectives**

*Without your bones, you'd be shapeless—unable to sit, stand, walk, or move your fingers and toes. Your skeleton supports and protects your organ systems, and it's the foundation for much of the medical terminology you will learn in this book. For example, the radial artery (used for taking a pulse) is so named because it travels beside the radial bone of the forearm.*

*Understanding the surface anatomy of bones and their markings will enable you to describe and document the sites of symptoms, signs, and diagnostic and therapeutic procedures. The information in this lesson will provide you with the confidence and skills for using correct medical terminology to:*

- 4.1.1 Recognize the different health professionals involved in the diagnosis and treatment of skeletal problems.
- 4.1.2 Identify the tissues that form the skeletal system.
- 4.1.3 Discuss the structures and functions of the skeletal system.
- 4.1.4 Differentiate the types of bones in the skeletal system.
- 4.1.5 Evaluate the major problems and diseases that occur in the skeletal system.

**Abbreviations**

DO Doctor of Osteopathy  
MD Doctor of Medicine  
DC Doctor of Chiropractic

Many health professionals are involved in the diagnosis and treatment of problems in the skeletal system. You may work directly and/or indirectly with one or more of the following:

- **Orthopedic surgeons (orthopedists)** are medical doctors (MDs) who deal with the prevention and correction of injuries of the skeletal system and associated **muscles**, joints, and ligaments.
- **Osteopathic physicians** have earned a doctor of osteopathy (DO) degree and receive additional training in the **musculoskeletal system** and how it affects the whole body.
- **Chiropractors (DC)** focus on the manual adjustment of joints—particularly the spine—in order to maintain and restore health.
- **Physical therapists** evaluate and treat pain, disease, or injury by physical therapeutic measures, as opposed to medical or surgical measures.
- **Physical therapist assistants** work under the direction of a physical therapist to assist patients with their physical therapy.
- **Orthopedic technologists and technicians** assist orthopedic surgeons in treating patients.
- **Podiatrists** are practitioners in the diagnosis and treatment of disorders and injuries of the foot.

## Lesson 4.1

### Bones of the Skeletal System

**Tissues and Functions of the Skeletal System** (LO 4.1, 4.2, and 4.4)

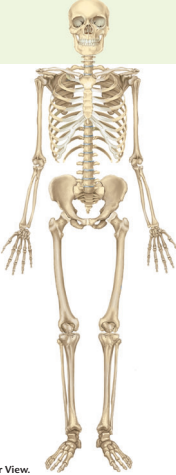

There are four components of the skeletal system (Figure 4.1):

1. **bones.**
2. **cartilage.**
3. **tendons, and**
4. **ligaments.**

Each plays an important role in the way your tissues and skeletal system function. Your skeletal system provides:

- **Support:** The bones of your vertebral column, pelvis, and legs hold up your body. The jawbone supports your teeth.
- **Protection:** The skull protects your brain. The vertebral column protects your spinal cord. The rib cage protects your heart and lungs.
- **Blood formation:** Bone marrow in many bones is the major producer of blood cells, including most of those in your immune system (see Chapter 7).
- **Mineral storage and balance:** The skeletal system stores calcium and phosphorus and releases them when your body needs them for other purposes.
- **Detoxification:** Bones remove metals like lead and radium from your blood, store them, and slowly release them for excretion.
- **Endocrine regulation:** Bone cells release a hormone called **osteocalcin**, which increases insulin secretion and reduces stores of fat.

**FIGURE 4.1**  
Adult Skeletal System, Anterior View.

### Word Analysis and Definition

S = Suffix P = Prefix R = Root R/CF = Combining Form

WORD	PRONUNCIATION	ELEMENTS	DEFINITION	
cartilage	KAR-ih-laj	Latin gristle	Nonvascular, firm connective tissue found mostly in joints	
chiropractic	kye-roh-PRAK-ik	S/ R/CF R/	-ic <i>pertaining to</i> <b>chiro-</b> <i>hand</i> <b>pract-</b> <i>efficient, practical</i> <b>-or</b> <i>a doer</i>	Diagnosis, treatment, and prevention of mechanical disorders of the musculoskeletal system Practitioner of chiropractic
chiropractor	kye-roh-PRAK-tor	S/ R/		
detoxification	dee-TOKS-ih-th-KAY-shun	S/ R/CF R/	-fication <i>remove</i> <b>de-</b> <i>from, out of</i> <b>-tox-</b> <i>poison</i>	Removing poison from a tissue or substance
ligament	LIG-ah-ment		Latin <i>band, sheaf</i>	Band of fibrous tissue connecting two structures
muscle	MUSS-əl		Latin <i>muscle</i>	A tissue consisting of cells that can contract
musculoskeletal	MUSS-kyu-loh-SKEL-eh-tal	S/ R/CF R/	-al <i>pertaining to</i> <b>musculo-</b> <i>muscle</i> <b>-skelet-</b> <i>skeleton</i>	Pertaining to the muscles and the bony skeleton
orthopedic	or-tho-PEE-dik	S/ R/CF R/	-ic <i>pertaining to</i> <b>ortho-</b> <i>straight</i> <b>-ped-</b> <i>child</i> <b>-ist</b> <i>specialist</i>	Pertaining to the correction and cure of deformities and diseases of the musculoskeletal system; originally, most of the deformities treated were in children Specialist in orthopedics
orthopedist	or-tho-PEE-dist	S/ R/		
osteocalcin	OSS-tee-oh-CAL-sin	S/ R/CF R/	-in <i>chemical compound</i> <b>oste/o-</b> <i>bone</i> <b>-calc-</b> <i>calcium</i>	A hormone produced by bone cells
osteopath	OSS-tee-oh-path	S/ R/CF R/	-path <i>disease</i> <b>oste/o-</b> <i>bone</i> <b>-pathy</b> <i>disease</i>	Practitioner of osteopathy
osteopathy	OSS-tee-oh-ah-three	S/ R/CF R/		Medical practice based on maintaining the balance of the body
tendon	TEN-dun		Latin <i>sinew</i>	Fibrous band that connects muscle to bone

### EXERCISES

A. Review the Case Report on this spread before answering the questions. LO 4.2, 4.8, and 4.10 Understand and

1. What kind of accident sent Mrs. Vargas to the ER? \_\_\_\_\_
2. What are her symptoms when she gets to the ER? \_\_\_\_\_
3. What diagnostic test did she have? \_\_\_\_\_
4. What did the test in question #3 above show? \_\_\_\_\_
5. What is the treatment plan for Mrs. Vargas? \_\_\_\_\_

B. Orthopedic vocabulary: This exercise can be answered entirely by using medical terms that appear on the two pages open in front of you. Mastering these terms will start you on your way to learning the language of orthopedics. From the description, identify the correct medical terminology. Fill in the blanks. LO 4.1 and 4.2 Remember

Description	Medical Term(s)
In addition to bones, which three terms are components of this chapter's body system?	1. _____ 2. _____ 3. _____
Which three terms refer to medical occupations?	4. _____ 5. _____ 6. _____
Which term represents a medical practice based on maintaining balance of the body?	7. _____
Which term has an element meaning poison?	8. _____
What is the name of the body system in this chapter?	9. _____

# WORD ANALYSIS AND DEFINITION TABLES

The medical terms covered in each lesson are introduced in context, either within a patient case or in the lesson topics. To facilitate easy reference and review, the terms are also listed in tables as a group. The **Word Analysis and Definition (WAD) Tables** list each term and its pronunciation, elements, and definition in a concise, color-coded, at-a-glance format.

## LESSON AND CHAPTER EXERCISES

Topics within a chapter end with exercises designed to allow students to check their basic understanding of the terms they just learned. These “checkpoints” can be used by instructors as assignments or for self-evaluation by students.

In *Connect* you will find additional review exercises that ask students to apply what they learned in all lessons of a chapter. These exercises reinforce learning and help students go beyond mere memorization to think critically about the medical language they use. In addition to reviewing and recalling the definitions of terms learned in the chapter, students are asked to use medical terms in new and different ways to ensure a thorough understanding.

### EXERCISES

A. Elements remain your best clue for understanding a medical term. In this exercise, the meaning of each element is given below the line—this is your clue to constructing the term. Write the correct element on the line above its meaning. After you have constructed the term, give its definition in the space provided. **LO 4.1 and 4.2 Apply**

- \_\_\_\_\_ / \_\_\_\_\_ / \_\_\_\_\_  
cortex pertaining to  
 The term is \_\_\_\_\_ and means \_\_\_\_\_
- \_\_\_\_\_ / \_\_\_\_\_ / \_\_\_\_\_  
around bone structure  
 The term is \_\_\_\_\_ and means \_\_\_\_\_
- \_\_\_\_\_ / \_\_\_\_\_ / \_\_\_\_\_  
upon, above growth pertaining to  
 The term is \_\_\_\_\_ and means \_\_\_\_\_
- \_\_\_\_\_ / \_\_\_\_\_ / \_\_\_\_\_  
medulla pertaining to  
 The term is \_\_\_\_\_ and means \_\_\_\_\_

B. Use this exercise to review what you've learned about bones. **LO 4.2 and 4.4 Remember**

- Bones in the skeletal system are classified by their \_\_\_\_\_
- What are the most common types of bones in the body? \_\_\_\_\_
- What is another name for “compact” bone? \_\_\_\_\_
- Where can you find bone marrow? \_\_\_\_\_
- The strong blood supply in bones is provided by the \_\_\_\_\_
- The shaft of a long bone is called the \_\_\_\_\_

Lesson 4.1 Bones of the Skeletal System 61

 -ion  
 -ary  
 -opsy  
 -logy  
 -ous  
 -oma

[report a content issue](#)

# VIVID ILLUSTRATIONS AND PHOTOS

Colorful, precise anatomical illustrations and photos lend a realistic view of body structures and correlate to the clinical context of the lessons.

## Lesson 11.2

### The Eyeball and Seeing

#### Objectives

Although your eyeball may appear to be solid, it's actually a hollow sphere that measures around 1 inch in diameter. Knowledge of its terminology, structure, and function allows you to understand how we see and what major problems and disorders can arise with the eye. In this lesson, the information will enable you to use correct medical terminology to:

- 11.2.1 Identify the principal structures of the eyeball and their functions.
- 11.2.2 Explain the role of the cornea and the problems that can occur in that structure.
- 11.2.3 Describe the structures and functions of the lens and its associated structures.
- 11.2.4 Link the different components of the retina to their functions.
- 11.2.5 Discuss disorders of the eyeball.

#### Keynotes

- The cornea protects the eye and, by changing shape, provides about 60% of the eye's focusing power.
- The iris controls the amount of light entering the eye.
- The lens changes its shape to focus rays of light on the retina.
- Medical shorthand for a quick, normal eye examination can be **PERRLA**: Pupils Equal, Round, Reactive to Light and Accommodation.

#### The Eyeball (Globe) (LO 11.5)

The functions of the eyeball are to continuously:

1. **Adjust** the amount of light it lets in to reach the retina;
2. **Focus** on near and distant objects; and
3. **Produce** images of those objects and instantly transmit them to the brain.

As shown earlier in this chapter, the front of the eyeball is covered by the conjunctiva. This thin layer of tissue lines the inside of the eyelids and curves over the eyeball to meet the **sclera** (Figure 11.9), the tough, white outer layer of the eye.

At the center of the front of the eye is the **cornea**, a transparent, dome-shaped membrane. The cornea has no blood supply and obtains its nutrients from tears and from fluid in the anterior chamber behind it.

When light rays strike the eye, they pass through the cornea. Because of its dome curvature, those rays striking the edge of the cornea are bent toward its

center. The light rays then go through the **pupil**, the black opening in the center of the colored area (the **iris**) in the front of the eye.

The iris controls the amount of light entering the eye. For example, when you're in the dark outside at night the iris opens (**dilates**) to allow more light into the eye. When you're in bright sunlight or in a well-lit room, the iris closes (**constricts**) to allow less light into the eye.

After traveling through the pupil, the light rays pass through the transparent **lens**. This lens can become thicker and thinner, enabling it to bend light rays and focus them on the **retina** at the back of the eye. Accommodation is the process of changing focus, and **refraction** is the process of bending light rays.

The lens does not contain blood vessels (**avascular**) or nerves, and with increasing age, it loses its elasticity. Because of this reduced elasticity, when you reach your forties, your eyes may have difficulty focusing on near objects, a condition called **presbyopia**.

▲ FIGURE 11.9 Anatomy of the Eyeball.

tory tests for it. The only treatment options are pain management, physiotherapy, and stress reduction.

▲ FIGURE 5.3 RICE Treatment.

## Lesson 4.2 (cont'd) Skull and Face (LO 4.2 and 4.6)

### The Skull (LO 4.2 and 4.6)

When you glance at your face in the mirror, chances are you're not thinking about what's behind your brown eyes or your slightly crooked smile. You see one image—not its layers, pieces, or parts. However, the human skull (Figure 4.9) is made up of 22 separate bones. Your **cranium**, the upper part of the skull that encloses the **cranial** cavity and protects the brain, contains 8 of these 22 bones; your facial skeleton contains the rest.

▲ FIGURE 4.9 Skull, Right Lateral View.

▲ FIGURE 4.10 Facial Bones.

The bones of the cranium are joined together by sutures (joints that appear as seams), which are covered on the inside and outside by a thin layer of connective tissue. These bones have the following functions:

1. The **frontal** bone forms the forehead, roofs of the (eye) orbits, and part of the floor of the cranium and contains a pair of right and left frontal sinuses above the orbits.
2. **Parietal** bones form the bulging sides and roof of the cranium.
3. The **occipital** bone forms the back of and part of the base of the cranium.
4. **Temporal** bones form the sides of and part of the base of the cranium.
5. The **sphenoid** bone forms part of the base of the cranium and the orbits.
6. The **ethmoid** bone is hollow and forms part of the nose, the orbits, and the ethmoid sinuses.

These bones of the skull provide protection for the brain and the organs of vision, taste, hearing, equilibrium, and smell.

The lower part of the skull houses the bones of the facial skeleton (Figure 4.10). These bones do the following:

1. **Maxillary** bones form the upper jaw (**maxilla**), hold the upper teeth, and are hollow, forming the maxillary sinuses.
2. **Palatine** bones are located behind the maxilla and cannot be seen on a lateral view of the skull.
3. **Zygomatic** bones are the prominences of the cheeks (cheekbones) below the eyes.
4. **Lacrimal** bones form the medial wall of each orbit.
5. **Nasal** bones form the sides and bridge of the nose.
6. The **mandible** is the lower jawbone, which holds the lower teeth. The mandible articulates (joins) with the temporal bone to form the **temporomandibular joint (TMJ)**.

The bones of the facial skeleton provide a frame on which the muscles and other tissues of the face facilitate eating, facial expressions, breathing, and speech.

The third component of the axial skeleton, the rib cage, is discussed in Chapter 8, "Respiratory System."

#### Abbreviation

TMJ temporomandibular joint

## TABLES

Meaningful tables aid in summarizing concepts and lesson topics.

### Lesson 4.1 (cont'd) Bone Fractures (FXs) (LO 4.2 and 4.5)

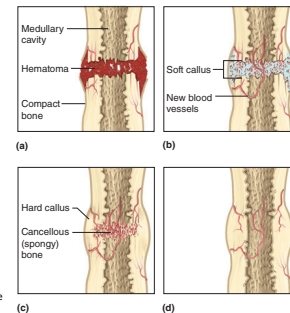

▲ FIGURE 4.6 Bone Fractures.

▼ TABLE 4.1 CLASSIFICATION AND DEFINITION OF BONE FRACTURES

Name	Description	Reference
<b>Closed</b> (also called <b>simple fracture</b> )	A bone is broken, but the skin is not broken.	Figure 4.6g
<b>Open</b> (also called <b>compound fracture</b> )	A fragment of the fractured bone breaks the skin, or a wound extends to the site of the fracture.	Figure 4.6e
<b>Displaced</b>	The fractured bone parts are out of line.	Figure 4.6e
<b>Complete</b>	A bone is broken into at least two fragments.	Figure 4.6a
<b>Incomplete</b>	The fracture does not extend completely across the bone. It can be hairline, as in a stress fracture in the foot, when there is no separation of the two fragments.	Figure 4.6a
<b>Comminuted</b>	The bone breaks into several pieces, usually two major pieces and several smaller fragments.	Figure 4.6b
<b>Transverse</b>	The fracture is at right angles to the long axis of the bone.	Figure 4.6b
<b>Impacted</b>	The fracture consists of one bone fragment driven into another, resulting in shortening of a limb.	Figure 4.6c
<b>Spiral</b>	The fracture spirals around the long axis of the bone.	Figure 4.6d
<b>Oblique</b>	The fracture runs diagonally across the long axis of the bone.	Figure 4.6d
<b>Linear</b>	The fracture runs parallel to the long axis of the bone.	Figure 4.6f
<b>Greenstick</b>	This is a partial fracture. One side breaks, and the other bends.	Figure 4.6g
<b>Pathologic</b>	The fracture occurs in an area of bone weakened by disease, such as cancer.	—
<b>Compression</b>	The fracture occurs in a vertebra from trauma or pathology, leading to the vertebra being crushed.	—
<b>Stress</b>	This is a fatigue fracture caused by repetitive, local stress on a bone, as occurs in marching or running.	—

### Healing of Fractures (LO 4.2 and 4.5)

When a bone is fractured, blood vessels bleed into the fracture site, forming a hematoma (Figure 4.7a). After a few days, bone-forming cells called **osteoblasts** move in and start to produce new bone cells (osteocytes), which form a **callus** (Figure 4.7b). Osteoblasts continue to produce bone cells, which form **cancellous** (spongy) bone to replace the callus (Figure 4.7c). As more bone cells form, the spongy bone structure is replaced by compact bone, which fuses together the bone segments (Figure 4.7d). Uncomplicated fractures take 8 to 12 weeks to heal. (Surgical procedures to help fractures heal are shown in Lesson 4.4.)

▶ FIGURE 4.7 Healing of Bone Fracture.

## KEYNOTES AND ABBREVIATIONS

Keynotes and Abbreviations offer students additional information correlating to the lesson.

### Lesson 4.1 (cont'd) Diseases of Bone (LO 4.2 and 4.5)

#### Keynote

- **Osteomalacia** occurs in some developing nations and occasionally in this country when children drink soft drinks instead of milk fortified with vitamin D.

#### Abbreviations

BMD	bone mineral density
DEXA	dual energy x-ray absorptiometry
FDA	Food and Drug Administration
IU	international unit(s)
mg	milligram

One of the major bone diseases is **osteoporosis**, which results from a loss of bone density (Figure 4.4). More common in women than in men, the incidence of osteoporosis increases with age. In the United States alone, 10 million people are living with osteoporosis and 18 million more have low bone density (**osteopenia**).

Osteopenia puts people at risk for developing osteoporosis.

In women, production of the hormone estrogen decreases after menopause, weakening the body's protection against bone loss and potentially resulting in fragile, brittle bones. In men, lower levels of testosterone have a similar but less noticeable effect.

Women at risk for osteoporosis should have a bone mineral density (BMD) screening using a **DEXA** scan, which is a measuring device that uses low-energy radiation beams. Men and women over 50 are often advised to follow a daily regimen of 1,200 milligrams (mg) of calcium, 400 to 600 international units (IU) of vitamin D, and 15 minutes of real sun exposure. In addition, there are several FDA-approved medications available for treating osteoporosis.

Other bone diseases that may not be as prevalent or publicized as osteoporosis are the following:

**Osteomyelitis:** an inflammation in a bone area caused by a bacterial infection, such as staphylococcus.

**Osteomalacia:** a disease (known as **rickets** in children) caused by vitamin D deficiency where the calcium-lacking bones become soft and flexible, lose their ability to bear weight, and become bowed.

**Achondroplasia:** a very rare condition where the long bones stop growing in childhood, but the axial skeleton bones are not affected (Figure 4.5). People with this condition are short in stature, with the average adult measuring about 4 feet tall. Although intelligence and life span are normal, the disease is caused by a spontaneous gene mutation that then becomes a dominant gene for succeeding generations.

**Osteogenesis imperfecta:** a rare genetic disorder producing very brittle bones that are easily fractured or broken, often **in utero** (while inside the uterus).

**Primary bone cancer** is found in three forms:

1. **Osteogenic sarcoma** occurs most often in bone cells around the knee in adolescents.
2. **Ewing sarcoma** occurs most often in children and adolescents.
3. **Chondrosarcoma** arises in cartilage cells, often in the pelvises of older people.

#### Case Report 41 (continued)

On questioning, Amy Vargas demonstrated many of the risk factors for osteoporosis, including family history, lack of exercise, cigarette smoking, inadequate diet, postmenopause, and increasing age.

## ACKNOWLEDGMENTS

I wish to thank the talented efforts of a group of dedicated individuals at McGraw-Hill Education who have made this book and its digital ancillary products come together: Chad Grall, Managing Director, Health Professions, for championing this book through the approval process; William Mulford, Executive Brand Manager, for his skillful leadership; Yvonne Lloyd, Product Developer, for her ability to get things done so smoothly; Jane Mohr, Lead Full-Service Content Manager, for keeping the project on track; Katherine Ward, Digital Product Analyst, for skillfully managing the integration of the digital products; Harper Christopher, Executive Marketing Manager, for organizing the positioning of the book; and Kimberly Bauer, Market Development Manager, who will conduct live reviews of the content and digital exercises.

I also wish to thank Ramya T. of SPi Global for managing the copyediting and proofreading and Verabaghu Nagarajan of Lumina Data-matics for obtaining the necessary photographs and diagrams.

## David M. Allan

David Allan received his medical training at Cambridge University and Guy's Hospital in England. He was Chief Resident in Pediatrics at Bellevue Hospital in New York City before moving to San Diego, California.

Dr. Allan has worked as a family physician in England, a pediatrician in San Diego, and Associate Dean at the University of California, San Diego School of Medicine. He has designed, written, and produced more than 100 award-winning multimedia programs with virtual reality as their conceptual base. Dr. Allan resides happily in San Diego.

## Karen D. Lockyer

Karen Lockyer holds a degree in Health Information (RHIT), a national coding certification (CPC), and a BS from Rutgers University. She is also a credentialed member of AHIMA (American Health Information Management Association) and AAPC (American Academy of Professional Coders).

Mrs. Lockyer has worked in medical practice administration and the Health Information Management fields for many years. She has taught medical terminology for high school, community college, and workforce development areas at the National Institutes of Health and the federal government's Office of Personnel Management. She has also taught coding and billing for undergraduate and certificate programs at the community college level.

# Learning the Essentials of Medical Language

## Welcome

## Learning Outcomes

In order to get the most out of your learning experiences and this textbook, you need to:

- LO W.1** Establish a commitment to learn medical terminology.
- LO W.2** Recognize the knowledge and skills you will need to be an active learner.
- LO W.3** Understand how the contextual approach of this book promotes active learning.
- LO W.4** Utilize the pedagogical devices used in each chapter and lesson.
- LO W.5** Use the vivid illustrations, photos, and tables in the book to enhance understanding of the concepts being taught.
- LO W.6** Solve the exercises in each lesson and at the end of each chapter to demonstrate understanding of the material.
- LO W.7** Implement the effective organizational strategies and study habits described in this chapter of the book.
- LO W.8** Understand how a commitment to lifelong learning will enhance your professionalism.
- LO W.9** Differentiate the roles of the various members of a health care team in different medical specialties and settings.

## *Case Report W.1*

### You are . . .

. . . a student preparing for a career as a health professional and allied health care worker.

### You are communicating with . . .

. . . many different health professionals in health care teams as you go through an externship at Fulwood Medical Center. The center comprises a medical office building with physicians in a wide range of primary care, medical specialties, and complementary medicine therapies; a 300-bed hospital with a busy Emergency Room and operating rooms; a laboratory, pharmacy, X-Ray Department, Physiotherapy Department, and Patient Education Unit that serve both the hospital and the medical offices.

Between attending classes, doing your externship, working part-time, and bringing up two children, you have a full schedule. The knowledge and skills you are learning in the classroom and at Fulwood Medical Center will prepare you for a successful future.

▲ **FIGURE W.1**  
Direct Communication  
with Doctor and Patient.

## Case Report W.2

### You are . . .

. . . Luis Guitterez, a certified medical assistant (CMA) working with Susan Lee, MD, a primary care physician at Fulwood Medical Center.

### You are communicating with . . .

. . . Dr. Lee and Mrs. Martha Jones, a patient.

**Luis Guitterez, CMA:** Dr. Lee, this is Mrs. Martha Jones, who is a type 2 **diabetic** with **retinopathy** and **neuropathy**. She had a routine appointment with us today. Her temperature is 97.8, pulse 120, respirations 24, blood pressure 100/50.

**Mrs. Martha Jones:** Dr. Lee, I've had a cough and cold for the past few days, and today I'm feeling drowsy and nauseous and my chest hurts.

**Dr. Lee:** Did you give yourself your morning insulin?

**Mrs. Jones:** I can't remember.

**Dr. Lee:** Luis, she's confused, has **tachycardia** and **tachypnea**, and is **hypotensive**. I'm concerned she is going into diabetic **ketoacidosis**. Get the glucometer and test her blood glucose while I examine her. She may have **pneumonia**.

(Note: The pronunciations and meanings of the medical terms used in this Case Report are on page W-9.)

## Keynote

As a health professional, you are part of a team of medical and other professionals who provide health care services designed to improve the health and well-being of their patients.

## The Health Care Team (LO W.9)

Fulwood Medical Center is a realistic health care setting that allows you to experience the use of medical language. Each chapter in this book focuses on the medical terminology used in a specific medical specialty and the body systems related to that specialty. A variety of health professionals make up the teams caring for patients in each medical specialty.

The team leader is a medical doctor, or physician, who can be an **MD** (doctor of medicine) or a **DO** (doctor of osteopathy). Most **managed care systems** require the patient to have a **primary care physician**. This physician can be a **family practitioner, internist, or pediatrician** (for children) and is responsible for the continuing overall care of the patient. In managed care, the primary care physician acts as the "gatekeeper" for the patient to enter the system, supervising all care the patient receives.

If needed medical care is beyond the expertise of the primary care physician, the patient is referred to a medical specialist whose expertise is based on a specific body system or even a part of a body system. For example, a **cardiologist** has expertise in diseases of the heart and vascular system, whereas a **dermatologist** specializes in diseases of the skin and an **orthopedist** in problems with the musculoskeletal system. A **gastroenterologist** is an expert in diseases of the whole digestive system, whereas a **colorectal surgeon** specializes only in diseases of the lower gastrointestinal tract.

Other health professionals work under the supervision of the physician and provide direct care (*Figure W.1*) to the patient. These can include a **physician assistant, nurse practitioner, medical assistant**, and, in specialty areas, different therapists, technologists, and technicians with expertise in the use of specific therapeutic and diagnostic tools.

Still other health professionals on the team provide indirect patient care (*Figure W.2*). These include **administrative medical assistants**,

▲ **FIGURE W.2**  
Administrative medical assistants are among the health professionals who provide indirect care to patients.

transcriptionists, health information technicians, medical insurance billers, and coders, all of whom are essential to providing high-quality patient care.

As you study the language of each medical specialty at Fulwood Medical Center, you will also meet the members of each specialty's health care team and learn more about their roles in caring for the patient.

## “Why Do I Need to Learn Medical Terminology?” Communication Needs

Throughout your career as a health professional, you will need to communicate with other health professionals. This need is present whether you are providing direct patient care—for example, as a CMA like Luis Guitterez—or whether you are providing indirect patient care—for example, as a medical transcriptionist, biller, or coder. In this book, you will find all the medical terms necessary to equip yourself with the essential medical vocabulary needed for work and further study in any of the allied health professional careers.

As you can see in Case Report W.2, health professionals use specific terms and a different language to describe to each other situations they encounter each day. You need to be able to understand, spell, and pronounce the terms they use.

Modern medical terminology is an artificial language constructed over centuries using words and elements from Greek and Latin origins (where healing professions began). Some 15,000 or more words are formed from 1,200 Greek and Latin roots. New words are being added continually as new medical discoveries are made. Medical terminology enables health professionals from different fields, different specialties, and different countries to communicate clearly and precisely with each other. Every profession has its own language (*Figure W.3*).

## Listening, Speaking, Reading, Writing, and Critical Thinking

Daily in your practice as a health professional you will:

**Listen** to information from physicians about patient care, and carry out their instructions.

**Listen** to patients describing their symptoms, and translate their descriptions into medical terms.

**Speak** to physicians and other health professionals to report information and ask questions.

**Speak** to patients to translate and clarify information given to them by physicians and other health professionals.

**Read** physicians' comments and treatment plans in patient medical records and insurance reports.

**Read** the results of physical examinations, procedures, and laboratory and diagnostic tests.

**Write** to document actions taken by yourself and other members of the health care team (*Figure W.4*).

**Write** to precisely record verbal orders, test results given over the phone, and other phone messages.

**Think** critically to evaluate medical documentation for accuracy.

**Think** critically to analyze and discover the meaning of unfamiliar medical terms using the strategies outlined in *Chapter 1* of this book.

IF YOU CANNOT SPEAK AND UNDERSTAND THE LANGUAGE, YOU CANNOT JOIN THE CLUB.

▲ **FIGURE W.3**  
Every Profession Has Its Own Language

You may have difficulty understanding your auto mechanic when she tells you that the expansion valve, evaporator core, and orifice tubes in your air-conditioning system need to be replaced.

▲ **FIGURE W.4**  
Accurate Documentation of Care Is Critical.

## Muscles and Tendons

The Essentials of the Languages of  
Orthopedics and Rehabilitation

CHAPTER  
5

### Learning Outcomes

The appendicular skeleton, which includes the bones of the upper and lower limbs, is attached to the axial skeleton through joints and associated muscles. Understanding the terminology that identifies and describes the muscles and tendons of the limbs and trunk is vital to your knowledge of the human body. Information in this chapter provides correct medical terminology to:

LO 5.1 Use roots, combining forms, suffixes, and prefixes to construct and analyze (deconstruct) medical terms related to muscles and tendons and rehabilitation medicine.

LO 5.2 Spell and pronounce correctly medical terms related to muscles and tendons and rehabilitation medicine in order to communicate them with accuracy and precision in any health care setting.

LO 5.3 Define accepted abbreviations related to muscles and tendons and rehabilitation medicine.

LO 5.4 Relate the three different types of muscles to their structures, functions, and disorders.

LO 5.5 Identify diagnostic and therapeutic methods for disorders of the muscles and tendons.

LO 5.6 Describe the muscles and tendons of the trunk, shoulder girdle, and upper limbs and their disorders.

LO 5.7 Describe the muscles and tendons of the pelvic girdle and lower limbs and their disorders.

LO 5.8 Identify the goals of rehabilitation medicine for disorders of the musculoskeletal system.

LO 5.9 Apply and interpret the medical terms of the muscles and tendons, their disorders and rehabilitation medicine to documentation, medical review, and medical reports.

LO 5.10 Translate the medical terms of the muscles and tendons and their disorders and rehabilitation medicine into everyday language in order to communicate clearly with patients and their families.

51

## “What’s Unique About This Book?”

Although the chapters in this book are organized by body system, as in many other textbooks on medical terminology, this book has many unique features that enhance learning, create interest, and provide a consistent learning strategy for you.

Each chapter is broken down into lessons; each lesson is broken down into self-contained topic areas so that there are smaller “chunks” of information to master.

## You Are . . . You Are Communicating With . . .

At the beginning of each chapter and lesson, you are placed in the role of a health professional in a field related to the body system and medical specialty covered in the material. At the same time, learning objectives (LOs) are presented for each chapter and lesson. These techniques immediately engage your attention, motivate you to read on to discover how this patient’s diagnosis and care progress, and illustrate the medical terminology being introduced in the lessons.

## Word Analysis And Definition

All the information needed for a topic area is presented in self-contained two-page spreads.

On the left-hand page, the new medical terms are introduced. On the right-hand page, for

each new medical term the pronunciation, color-coded word elements, and definition are provided in a **Word Analysis and Definition (WAD)** box. For example, in Case Report W.2 earlier in this chapter, the medical terms diabetic, retinopathy, neuropathy, tachycardia, tachypnea, hypotensive, ketoacidosis, glucometer, and pneumonia were used. On the right-hand page here, you can see an example of how these terms are analyzed. All these terms will appear again in the appropriate body-system chapter.

Also, below each WAD are exercises that test your understanding of key components of the terminology analyzed in the WAD.

## Exercises

In addition to the exercises at the end of each topic area, there are chapter review questions exercises included in Connect (see below).

Attention is given to developing skills in pronunciation, spelling, forming plurals, using abbreviations, and writing medical language. The exercises take you beyond memorization and teach you to think critically about the realistic application of the medical language you are learning.

## Keynotes

- **Study Hints** provide ways to help retain knowledge.
- **Abbreviation Boxes** show commonly accepted abbreviations.
- **Illustrations and photos** are vivid and clear and correlate precisely to the appropriate terms in the text.

 connect

A ONE-STOP SPOT TO PRESENT, DELIVER, AND ASSESS DIGITAL ASSETS AVAILABLE WITH ESSENTIALS OF MEDICAL LANGUAGE:

**McGraw-Hill Connect® Essentials of Medical Language** provides online presentation, assignment, and assessment solutions. It connects students with the tools and resources they’ll need to achieve success. With *Connect*, students can complete assignments, quizzes, and tests online. A robust set of questions and activities, including all of the lesson exercises and end-of-chapter questions, additional case studies, and interactives, are presented and aligned with the textbook’s learning outcomes.

**Connect Essentials of Medical Language** also provides students with 24/7 online access to an ebook. This media-rich version of the textbook is available through the McGraw-Hill Education Connect platform and allows seamless integration of text, media, and assessments. To learn more, visit <http://connect.mheducation.com>.

 LEARNSMART™  
ADVANTAGE

MCGRAW-HILL EDUCATION’S ADAPTIVE SUITE

New from McGraw-Hill Education, LearnSmart Advantage is a series of adaptive learning products, which include LearnSmart, Smartbook, LearnSmart Prep, LearnSmart Achieve, and LearnSmart Labs. Since 2009, LearnSmart has been the most widely used and intelligent adaptive learning resource proven to improve learning. Developed to deliver demonstrable results in boosting grades, increasing course retention, and strengthening memory recall, the LearnSmart Advantage series spans the entire learning process from course preparation to providing the first adaptive reading experience, and it’s found only in SmartBook. Distinguishing what students know from what they don’t, and honing in on concepts they are most likely to forget, each product in the series helps students study smarter and retain more knowledge. A smarter learning experience for students coupled with valuable reporting tools for instructors, and available in hundreds of course areas, LearnSmart Advantage is advancing learning like no other products in higher education today. **Go to [www.LearnSmartAdvantage.com](http://www.LearnSmartAdvantage.com)** for more information.

## Word Analysis and Definition

S = Suffix P = Prefix R = Root R/CF = Combining Form

WORD	PRONUNCIATION	ELEMENTS		DEFINITION
diabetes mellitus	dye-ah-BEE-teez MEL-ih-tus		diabetes, Greek <i>a siphon</i> mellitus, Latin <i>sweetened with honey</i>	Metabolic syndrome caused by absolute or relative insulin deficiency and/or insulin ineffectiveness Pertaining to or suffering from diabetes
diabetic (adj)	dye-ah-BET-ik	S/ R/	-ic <i>pertaining to</i> diabet- <i>diabetes</i>	
hypotension	HIGH-poh-TEN-shun	S/ P/ R/	-ion <i>action, condition</i> hypo- <i>below</i> -tens- <i>pressure</i>	Persistent low arterial blood pressure
hypotensive (adj)	HIGH-poh-TEN-siv	S/	-ive <i>pertaining to, quality of</i>	Pertaining to or suffering from hypotension
ketoacidosis	KEY-toe-ass-ih-DOE-sis	S/ R/CF R/CF	-sis <i>abnormal condition</i> ket/o- <i>ketone</i> -acid/o- <i>acid</i>	Excessive production of ketones, making the blood acidic
neuropathy	nyu-ROP-ah-thee	S/ R/CF	-pathy <i>disease</i> neur/o- <i>nerve</i>	Any disorder affecting the nervous system
pneumonia (Note: The initial "p" is silent.)	new-MOH-nee-ah	S/ R/	-ia <i>condition</i> pneumon- <i>air, lung</i>	Inflammation of the lung parenchyma
retinopathy	ret-ih-NOP-ah-thee	S/ R/CF	-pathy <i>disease</i> retin/o- <i>retina</i>	Any disease of the retina
tachycardia	tack-ih-KAR-dee-ah	S/ P/ R/	-ia <i>condition</i> tachy- <i>rapid</i> -card- <i>heart</i>	Rapid heart rate, above 100 beats per minute
tachypnea	tack-ip-NEE-ah	P/ R/	tachy- <i>rapid</i> -pnea <i>breathe</i>	Rapid breathing

The elements of a term are discussed in Chapter 1.

SmartBook is the first and only adaptive reading experience currently available. SmartBook personalizes content for each student in a continuously adapting reading experience. Reading is no longer a passive and linear experience, but an engaging and dynamic one where students are more likely to master and retain important concepts, thus coming to class better prepared. Valuable reports provide instructors with insight into how students are progressing through textbook content, and are useful for shaping in-class time and assessments. As a result of the adaptive reading experience found in SmartBook, students are more likely to retain knowledge, stay in class, and get better grades. This revolutionary technology is available only from McGraw-Hill Education for hundreds of course areas as part of the LearnSmart Advantage series.

## EXERCISES

**Elements** are your best tool for understanding medical terms. In the chart below, the elements are listed in column 1. Identify the meaning of each element in column 2, and give an example of a term containing that element in column 3. Some terms will apply to more than one element. The first one is done for you.

Element	Meaning of Element	Medical Term Containing This Element
hypo	below	hypotension
tens		
ion		
neuro		
retino		
pathy		
ia		
pneumon		
pnea		
tachy		

1. Choose any term from column 3, and use it in a sentence of your choice:

---

---

---

## “What Is Lifelong, Active Learning?”

### Lifelong Learning

Your current training in medical terminology is necessary for you to be able to continue your education in your health care profession. But it is important to recognize that school is only one of the many places where you acquire knowledge.

You also acquire knowledge:

- Each time you ask a question about a patient or a report and receive an answer.
- Each time you analyze an unfamiliar medical term and discover its meaning.
- Each time you interact with a patient and see how that patient is coping with his or her problems (*Figure W.5*).

All these are opportunities for learning to discover *your own* answers to *your own* problems or lack of knowledge.

This type of knowledge—discovered through your own experience and driven by your own needs and goals—is genuine, real, and trustworthy for you. It is not like what you learn in school, which is determined by some distant authority.

The authentic knowledge you gain from solving your own problems, whether by yourself or with the help of other people or resources, motivates you to acquire still more knowledge and helps you grow as a person and as a professional.

Throughout your working life, additional classroom training will be needed to keep your skills and professional knowledge up to date with new developments in medicine. You will also continue to learn through your own experience. Everything you do in life can result in learning.

**Your own** experience and judgment become your most valuable resources for making your life vibrant, strong, creative, and what *you* want *it* to be.

**Your own** experience and judgment maximize your professional and personal success.

**Your own** learning never ends.

▲ **FIGURE W.5**  
Every Patient Interaction  
Is an Opportunity for  
Learning.

### Keynote

Novelist Lillian Smith said, “When you stop learning, stop listening, stop looking, and stop asking new questions, then it is time to die.”

▲ **FIGURE W.6**  
Medical assistant  
interacts with a  
physician.

### Actively Experiencing Medical Language

Medical terms were created to provide health care professionals a way to communicate with each other and document the care they provide. To provide effective patient care, all health care professionals must be fluent in medical language. One misused or misspelled medical term on a patient record can cause errors that can result in injury or death to patients, incorrect coding or billing of medical claims, and possible fraud charges.

When medical terms are separated from their intended context, as they are in other medical terminology textbooks, it is easy to lose sight of how important it is to use them accurately and precisely. Learning medical terminology in the context of the medical setting reinforces the importance of correct usage and precision in communication.

During your externship at Fulwood Medical Center, you will *experience* medical language. Just as in a real medical center, you will encounter and apply medical terminology in a variety of ways. Actively experiencing medical language will help ensure that you are truly learning, and not simply memorizing, the medical terms in each chapter. Memorizing a term allows you to use it in the same situation (e.g., repeating a definition) but doesn't help you apply it in new situations. Whether you are reading chart notes in a patient's medical record (*Figure W.6*) or a description of the treatment prescribed by a physician, you will see medical terms being used for the purpose they were intended.

## Active Learning

It's no good sitting back and expecting someone else to pour knowledge into your head. You have to **actively work at learning** (Figure W.7).

### Get the Most Out of Lectures

- **Prepare** for your classroom experiences. Preview the book chapter before class (Figure W.7), and the material will be much easier to understand.
- **Listen actively.** You cannot do this if you are looking at your cell phone, daydreaming, or worrying about what you have to get for dinner.
- **Ask** a question if you do not comprehend something the instructor is saying.
- **Write** good notes. Focus on the main points, and capture key ideas; review and edit your notes within 24 hours of the class.

### Get the Most Out of Reading

- **Concentrate** on what you are reading. Review the titles, objectives, headings, and visuals for each lesson to identify what the lesson is all about.
- **Read** actively using the SQ3R method (see the Study Hint) to help you.
- **Write** down any questions you have.

### Study with a Partner or Group

- **Find** a study partner. Schedule study dates, compare notes, talk through concepts and questions, and quiz each other.
- **Establish** a small study group, including your study partner. Again, compare notes and quiz each other.

### Perform Well on Tests

- **Read** the directions carefully, and scan the entire test so that you know how long it is and what types of activities it contains.
- **Answer** the easy questions or sections first so that you finish as much as possible before doing the difficult questions, which might slow you down.
- **Use** any extra time, after you have finished the test, to check that you have answered all the questions and then to confirm your answers.

### Know and Motivate Yourself

- What type of learner are you? **Visual**—who responds best by **seeing** information. **Auditory**—who works best by listening. **Tactile**—who prefers hands-on applications. Recognize your type and motivate yourself by emphasizing your best method of learning to help achieve your goals.

**A few months of committed study now is a small price to pay for a lifetime of professionalism.**

▲ **FIGURE W.7**  
Identify your own personal preferences for learning, and seek out the resources that will best help you with your studies. Recognize your weaknesses, and try to compensate for or work to improve them.

#### Study Hint

The SQ3R model for reading is a successful equation for studying:

Survey what you are going to read.

Question what you are going to learn after the preview.

Read the assignment.

Recite. Stop every once in a while, look up from the book, and put what you've just read into your own words.

Review. After you've finished, review the main points.

## Case Report W.3

Your first day of externship at Fulwood Medical Center went well. You enjoyed being in the Primary Care Clinic with Dr. Lee and Luis Guitterez, CMA. You wonder if this could be a career choice for you. Now it's 6:15 p.m. at home, and you have yet to feed the kids, get them to bed, pay some bills, pick up around the house, and review a whole chapter in your medical terminology text to prepare for a test in class tomorrow. How are you going to do all this?

### “How Can I Help Myself Learn Better?”

You have a lot of time and money invested in your education. To succeed, you need to be able to focus and manage your time and your studies. To manage the difficulties described in Case Report W.3 (Figure W.8), you need to:

▲ **FIGURE W.8**  
An Evening at Home.

#### Keynote

Life, living, and learning are constant choices of priority.

- **Recognize** the stresses in your life at different times.
- **Prioritize** mentally, and handle each task in the order of importance. In this case, eat a healthy meal with your kids, enjoy putting them to bed, pay the bills, and then relax (or meditate) for 10 minutes. When you are relaxed, settle down to review the text, and go to bed at a reasonable hour. Picking up around the house will have to wait because study and sleep are a higher priority. Sounds too easy? What other choices do you have to be able to study in an effective way?
- **Actively develop a support group.** Enlist the support of your spouse, parents, siblings, friends—any people you can trust and rely on. If you have a test every Thursday, get one of them to come over Wednesday night and put the kids to bed while you go over to his or her house or the library to study.
- **Find your own space.** Create a place where you keep everything for your courses at your fingertips, clutter-free.
- **Study when you are most productive.** Are you a night owl or an early bird? Set a daily study time for yourself.
- **Balance your life.** While studying should be a main focus, plan time for family, friends, leisure, exercise, and sleep.
- **Resist distractions.** Avoid the temptation to surf the Web, send instant messages, and make phone calls. Stick to your schedule.
- **Be realistic** when planning—know your limits and priorities.
- **Be prepared** for the unexpected (child's illness, your illness, inclement weather) that can turn your schedule into shambles.
- **Reprioritize** daily on the basis of schedule disruptions and other conflicts.
- **Identify** clear goals for what you need to get done today, this week, this month, before the end of the semester, and so on.

## EXERCISES

**Write out** all of your activities for a typical week. On average, how many hours each week do you spend sleeping, grooming, eating, working, running errands, studying, attending your children's activities, and watching TV? Add all the hours up. There are 168 hours in the week. How many hours do you have left for studying? A sample time budget is shown below.

Activity	Number of Hours per Day	Number of Days per Week	Number of Hours per Week
Sleeping	8	7	56
Grooming	1	7	7
Meals: preparation, eating, cleanup	1	7	7
Cleaning, laundry	1	3	3
Commuting to and from school	1	5	5
In class	4	5	20
Doing errands	1	3	3
Family time	3	7	21
Church, workout, hobbies			5
Job			30
Friends, going out, TV, entertainment			6
TOTAL			163
TOTAL HOURS IN A WEEK			168
Hours remaining for study			5

- ARE 5 HOURS ENOUGH FOR STUDY?
- WHEN ARE THEY AVAILABLE?
- WHAT CAN YOU DO TO INCREASE THEM?

STUDY HOURS SHOULD BE SPENT IN A SETTING THAT ALLOWS YOU TO CONCENTRATE ON YOUR WORK AND NOT BE DISTRACTED. TURN OFF YOUR CELL PHONE AND TV. THE BIGGEST QUESTION TO ASK YOURSELF IS, "AM I INVESTING MY TIME WISELY?" IF NOT, HOW CAN YOU BUDGET YOUR TIME DIFFERENTLY SO THAT MORE TIME IS SPENT ON HIGHER-PRIORITY ACTIVITIES?

# The Anatomy of Medical Terms

The Essential Elements of the Language of Medicine

## Case Report 1.1

### You are . . .

. . . a **respiratory therapist** working with Tavis Senko, MD, a pulmonologist at Fulwood Medical Center.

### You are communicating with . . .

. . . Mrs. Sandra Schwartz, a 43-year-old woman referred to Dr. Senko by her primary care physician, Dr. Andrew McDonald, an **internist**. Mrs. Schwartz has a persistent abnormality on her chest X-ray. You have been asked to determine her **pulmonary** function prior to a scheduled **bronchoscopy**.

This summary of a Case Report illustrates for you the use of some simple medical terms. Modern health care and medicine have their own language. The medical terms all have precise meanings, which enable you, as a health professional, to communicate clearly and accurately with other health professionals involved in the care of a patient. This communication is critical for patient safety and the delivery of high-quality patient care.

## Learning Outcomes

The technical language of medicine has been developed logically from Latin and Greek roots. In fact, it was in Latin and Greek cultures that the concept of treating patients began. Medical terms are built from their individual parts, or **elements**, which form the **anatomy** of the word. The information in this chapter will enable you to:

- LO 1.1** Select the **roots**, **combining vowels** and **combining forms** of medical terms.
- LO 1.2** Demonstrate the importance of **suffixes** and **prefixes** in forming medical terms.
- LO 1.3** Construct (build) medical terms from separate elements.
- LO 1.4** Deconstruct (break down) medical terms into their elements.
- LO 1.5** Use correctly the plurals of medical terms.
- LO 1.6** Articulate the correct pronunciations of medical terms.
- LO 1.7** Demonstrate precision and accuracy in documentation and other written and verbal communication of medical terms.
