

PRECALCULUS

Enhanced with Graphing Utilities

Seventh Edition

SULLIVAN • SULLIVAN

Get the most out of MyMathLab®

MyMathLab, Pearson's online learning management system, creates personalized experiences for students and provides powerful tools for instructors. With a wealth of tested and proven resources, each course can be tailored to fit your specific needs. Talk to your Pearson Representative about ways to integrate MyMathLab into your course for the best results.

Data-Driven Reporting for Instructors

- MyMathLab's comprehensive online gradebook automatically tracks students' results to tests, quizzes, homework, and work in the study plan.
- The Reporting Dashboard, found under More Gradebook Tools, makes it easier than ever to identify topics where students are struggling, or specific students who may need extra help.

Learning in Any Environment

- Because classroom formats and student needs continually change and evolve, MyMathLab has built-in flexibility to accommodate various course designs and formats.
- With a new, streamlined, mobile-friendly design, students and instructors can access courses from most mobile devices to work on exercises and review completed assignments.

Available in MyMathLab[®] for Your Precalculus Course

Achieve Your Potential

Success in math can make a difference in your life. MyMathLab is a learning experience with resources to help you achieve your potential in this course and beyond. MyMathLab will help you learn the new skills required, and also help you learn the concepts and make connections for future courses and careers.

Visualization and Conceptual Understanding

These MyMathLab resources will help you think visually and connect the concepts.

NEW! Guided Visualizations

These engaging interactive figures bring mathematical concepts to life, helping students visualize the concepts through directed explorations and purposeful manipulation. *Guided Visualizations* are assignable in MyMathLab and encourage active learning, critical thinking, and conceptual learning.

EXAMPLE Finding Vertical Asymptotes

Find the vertical asymptotes, if any, of the graph of each rational function.

$$R(x) = \frac{5x^2}{3+x}$$

$$R(x) = \frac{x^2 - 3x - 4}{x^2 + x + 1} = \frac{(x-4)(x+1)}{x^2 + x + 1}$$

$$x^2 + x + 1 = 0$$

Video Assessment Exercises

Video assessment is tied to key Author in Action videos to check students' conceptual understanding of important math concepts. Students watch a video and work corresponding assessment questions.

Preparedness and Study Skills

MyMathLab® gives access to many learning resources that refresh knowledge of topics previously learned. *Getting Ready* material, *Retain Your Knowledge Exercises*, and *Note-Taking Guides* are some of the tools available.

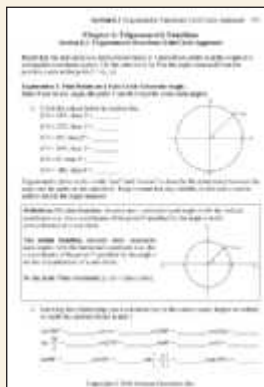

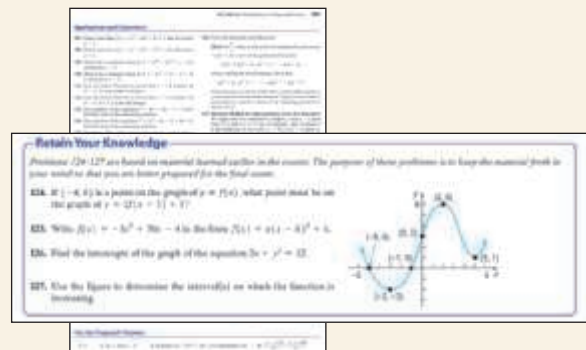

Getting Ready

Students refresh prerequisite topics through skill review quizzes and personalized homework integrated in MyMathLab. With *Getting Ready* content in MyMathLab students get just the help they need to be prepared to learn the new material.

Retain Your Knowledge Exercises

New! *Retain Your Knowledge Exercises* support ongoing review at the course level and help students maintain essential skills.

Guided Lecture Notes

Get help focusing on important concepts with the use of this structured organized note-taking tool. The *Guided Lecture Notes* are available in MyMathLab for download or as a printed student supplement.

Prepare for Class “Read the Book”

| Feature | Description | Benefit | Page(s) |
|--|---|---|-------------|
| Every Chapter Opener begins with ... | | | |
| Chapter-Opening Topic & Project | Each chapter begins with a discussion of a topic of current interest and ends with a related project. | In the concluding project, you will apply what you have learned to solve a problem related to the topic. | 257, 361 |
|  Internet-Based Projects | These projects allow for the integration of spreadsheet technology that you will need to be a productive member of the workforce. | The projects give you an opportunity to collaborate and use mathematics to deal with issues of current interest. | 257, 361 |
| Every Section begins with ... | | | |
| Learning Objectives  | Each section begins with a list of objectives. Individual objectives also appear in the text where they are covered. | These objectives focus your studying by emphasizing what’s most important and where to find it. | 278 |
| Sections contain ... | | | |
| PREPARING FOR THIS SECTION | Most sections begin with a list of key concepts to review, with page numbers. | Ever forget what you’ve learned? This feature highlights previously learned material to be used in this section. Review it, and you’ll always be prepared to move forward. | 278 |
| Now Work the ‘Are You Prepared?’ Problems | These problems assess whether you have the prerequisite knowledge for the upcoming section. | Not sure you need the Preparing for This Section review? Work the ‘Are You Prepared?’ problems. If you get one wrong, you’ll know exactly what you need to review and where to review it! | 278, 289 |
|  Now Work PROBLEMS | These follow most examples and direct you to a related exercise. | We learn best by doing. You’ll solidify your understanding of examples if you try a similar problem right away, to be sure you understand what you’ve just read. | 287 |
| WARNING | Warnings are provided in the text. | These point out common mistakes and help you avoid them. | 312 |
| Explorations and Seeing the Concept | These graphing utility activities foreshadow a concept or reinforce a concept just presented. | You will obtain a deeper and more intuitive understanding of theorems and definitions. | 227, 284 |
|  In Words | This feature provides alternative descriptions of select definitions and theorems. | Does math ever look foreign to you? This feature translates math into plain English. | 280 |
|  Calculus | This symbol appears next to information essential for the study of calculus. | Pay attention—if you spend extra time now, you’ll do better later! | 86, 88, 223 |
| SHOWCASE EXAMPLES | These examples provide “how to” instruction by offering a guided, step-by-step approach to solving a problem. | With each step presented on the left and the mathematics displayed on the right, you can immediately see how each step is employed. | 192–193 |
|  Model It! Examples and Problems | These examples and problems require you to build a mathematical model from either a verbal description or data. The homework Model It! problems are marked by purple problem numbers. | It is rare for a problem to come in the form “Solve the following equation.” Rather, the equation must be developed based on an explanation of the problem. These problems require you to develop models that will enable you to describe the problem mathematically and suggest a solution to the problem. | 303, 332 |

Practice “Work the Problems”

| Feature | Description | Benefit | Page(s) |
|--|--|---|--------------------|
| ‘Are You Prepared?’ Problems | These problems assess your retention of the prerequisite material. Answers are given at the end of the section exercises. This feature is related to the Preparing for This Section feature. | Do you always remember what you’ve learned? Working these problems is the best way to find out. If you get one wrong, you’ll know exactly what you need to review and where to review it! | 278, 289 |
| Concepts and Vocabulary | These short-answer questions, mainly fill-in-the-blank, multiple-choice, and true/false items, assess your understanding of key definitions and concepts in the current section. | It is difficult to learn math without knowing the language of mathematics. These problems test your understanding of the formulas and vocabulary. | 290 |
| Skill Building | Correlated with section examples, these problems provide straightforward practice. | It’s important to dig in and develop your skills. These problems give you ample opportunity to do so. | 290–292 |
| Mixed Practice | These problems offer comprehensive assessment of the skills learned in the section by asking problems related to more than one concept or objective. These problems may also require you to utilize skills learned in previous sections. | Learning mathematics is a building process. Many concepts build on each other and are related. These problems help you see how mathematics builds on itself and how the concepts are linked together. | 292 |
| Applications and Extensions | These problems allow you to apply your skills to real-world problems. They also enable you to extend concepts learned in the section. | You will see that the material learned within the section has many uses in everyday life. | 292–294 |
| Explaining Concepts: Discussion and Writing | “Discussion and Writing” problems are colored red. They support class discussion, verbalization of mathematical ideas, and writing and research projects. | To verbalize an idea, or to describe it clearly in writing, shows real understanding. These problems nurture that understanding. Many are challenging, but you’ll get out what you put in. | 295 |
| NEW! Retain Your Knowledge | These problems allow you to practice content learned earlier in the course. | Remembering how to solve all the different kinds of problems that you encounter throughout the course is difficult. This practice helps you remember previously learned skills. | 295 |
| Now Work PROBLEMS | Many examples refer you to a related homework problem. These related problems are marked by a pencil and orange numbers. | If you get stuck while working problems, look for the closest Now Work problem, and refer to the related example to see if it helps. | 279, 287, 288, 291 |
| Review Exercises | Every chapter concludes with a comprehensive list of exercises to practice. Use the list of objectives to determine what objective and examples correspond to each problem. | Work these problems to ensure that you understand all the skills and concepts employed in the chapter. Think of it as a comprehensive review of the chapter. All answers to Chapter Review problems appear in the back of the text. | 356–359 |

Review “Study for Quizzes and Tests”

| Feature | Description | Benefit | Page(s) |
|--|---|--|---------|
| The Chapter Review at the end of each chapter contains ... | | | |
| Things to Know | A detailed list of important theorems, formulas, and definitions from the chapter. | Review these and you'll know the most important material in the chapter! | 354–355 |
| You Should Be Able to ... | A complete list of objectives by section and, for each, examples that illustrate the objective, and practice exercises that test your understanding of the objective. | Do the recommended exercises and you'll have mastered the key material. If you get something wrong, go back and work through the example listed, and try again. | 355–356 |
| Review Exercises | These provide comprehensive review and practice of key skills, matched to the Learning Objectives for each section. | Practice makes perfect. These problems combine exercises from all sections, giving you a comprehensive review in one place. | 356–359 |
| Chapter Test | About 15–20 problems that can be taken as a Chapter Test. Be sure to take the Chapter Test under test conditions—no notes! | Be prepared. Take the sample practice test under test conditions. This will get you ready for your instructor's test. If you get a problem wrong, you can watch the Chapter Test Prep Video. | 359 |
| Cumulative Review | These problem sets appear at the end of each chapter, beginning with Chapter 2. They combine problems from previous chapters, providing an ongoing cumulative review. When you use them in conjunction with the Retain Your Knowledge problems, you will be ready for the final exam. | These problem sets are really important. Completing them will ensure that you are not forgetting anything as you go. This will go a long way toward keeping you primed for the final exam. | 360 |
| Chapter Projects | The Chapter Projects apply to what you've learned in the chapter. Additional projects are available on the Instructor's Resource Center (IRC). | The Chapter Projects give you an opportunity to apply what you've learned in the chapter to the opening topic. If your instructor allows, these make excellent opportunities to work in a group, which is often the best way of learning math. | 361 |
|  Internet-Based Projects | In selected chapters, a Web-based project is given. | These projects give you an opportunity to collaborate and use mathematics to deal with issues of current interest by using the Internet to research and collect data. | 361 |

To the Student

As you begin, you may feel anxious about the number of theorems, definitions, procedures, and equations you encounter. You may wonder if you can learn it all in time. Don't worry, your concerns are normal. This text was written with you in mind. If you attend class, work hard, and read and study effectively, you will build the knowledge and skills you need to be successful. Here's how you can use the text to your benefit.

Read Carefully

When you get busy, it's easy to skip reading and go right to the problems. Don't! The text provides a large number of examples and clear explanations to help you break down the mathematics into easy-to-understand steps. Reading will provide you with a clearer understanding, beyond simple memorization. Read before class (not after) so you can ask questions about anything you didn't understand. You'll be amazed at how much more you'll get out of class when you do this.

Use the Features

We use many different methods in the classroom to communicate. Those methods, when incorporated into the text, are called "features." The features serve many purposes, from supplying a timely review of material you learned before (just when you need it), to providing organized review sessions to help you prepare for quizzes and tests. Take advantage of the features and you will master the material.

To make this easier, we've provided a brief guide to getting the most from this book. Refer to the "Prepare for Class," "Practice," and "Review" guidelines on pages i–iii. Spend fifteen minutes reviewing the guide and familiarizing yourself with the features by flipping to the page numbers provided. Then, as you read, use them. This is the best way to make the most of your text.

Please do not hesitate to contact us, through Pearson Education, with any questions, comments, or suggestions about ways to improve this text. We look forward to hearing from you, and good luck with all of your studies.

Best Wishes!

Michael Sullivan

Michael Sullivan III

Contents

| | |
|--|--------------|
| Three Distinct Series | xix |
| The Enhanced with Graphing Utilities Series | xx |
| Preface to the Instructor | xxi |
| Resources for Success | xxvii |
| Applications Index | xxix |

1 **Graphs** **1**

1.1 The Distance and Midpoint Formulas; Graphing Utilities; Introduction to Graphing Equations **2**

Use the Distance Formula • Use the Midpoint Formula • Graph Equations by Plotting Points • Graph Equations Using a Graphing Utility • Use a Graphing Utility to Create Tables • Find Intercepts from a Graph • Use a Graphing Utility to Approximate Intercepts

1.2 Intercepts; Symmetry; Graphing Key Equations **18**

Find Intercepts Algebraically from an Equation • Test an Equation for Symmetry • Know How to Graph Key Equations

1.3 Solving Equations Using a Graphing Utility **26**

Solve Equations Using a Graphing Utility

1.4 Lines **29**

Calculate and Interpret the Slope of a Line • Graph Lines Given a Point and the Slope • Find the Equation of a Vertical Line • Use the Point–Slope Form of a Line; Identify Horizontal Lines • Write the Equation of a Line in Slope–Intercept Form • Find the Equation of a Line Given Two Points • Graph Lines Written in General Form Using Intercepts • Find Equations of Parallel Lines • Find Equations of Perpendicular Lines

1.5 Circles **45**

Write the Standard Form of the Equation of a Circle • Graph a Circle by Hand and by Using a Graphing Utility • Work with the General Form of the Equation of a Circle

Chapter Review **52**

Chapter Test **54**

Chapter Project **55**

2 **Functions and Their Graphs** **56**

2.1 Functions **57**

Determine Whether a Relation Represents a Function • Find the Value of a Function • Find the Difference Quotient of a Function • Find the Domain of a Function Defined by an Equation • Form the Sum, Difference, Product, and Quotient of Two Functions

2.2 The Graph of a Function **72**

Identify the Graph of a Function • Obtain Information from or about the Graph of a Function

2.3 Properties of Functions **81**

Determine Even and Odd Functions from a Graph • Identify Even and Odd Functions from an Equation • Use a Graph to Determine Where a Function Is

Increasing, Decreasing, or Constant • Use a Graph to Locate Local Maxima and Local Minima • Use a Graph to Locate the Absolute Maximum and the Absolute Minimum • Use a Graphing Utility to Approximate Local Maxima and Local Minima and to Determine Where a Function Is Increasing or Decreasing • Find the Average Rate of Change of a Function

| | | |
|------------|---|------------|
| 2.4 | Library of Functions; Piecewise-defined Functions | 95 |
| | Graph the Functions Listed in the Library of Functions • Graph Piecewise-defined Functions | |
| 2.5 | Graphing Techniques: Transformations | 106 |
| | Graph Functions Using Vertical and Horizontal Shifts • Graph Functions Using Compressions and Stretches • Graph Functions Using Reflections about the x -Axis and the y -Axis | |
| 2.6 | Mathematical Models: Building Functions | 118 |
| | Build and Analyze Functions | |
| | Chapter Review | 123 |
| | Chapter Test | 127 |
| | Cumulative Review | 128 |
| | Chapter Projects | 128 |

3 Linear and Quadratic Functions **130**

| | | |
|------------|--|------------|
| 3.1 | Properties of Linear Functions and Linear Models | 131 |
| | Graph Linear Functions • Use Average Rate of Change to Identify Linear Functions • Determine Whether a Linear Function Is Increasing, Decreasing, or Constant • Build Linear Models from Verbal Descriptions | |
| 3.2 | Building Linear Models from Data | 141 |
| | Draw and Interpret Scatter Diagrams • Distinguish between Linear and Nonlinear Relations • Use a Graphing Utility to Find the Line of Best Fit | |
| 3.3 | Quadratic Functions and Their Properties | 148 |
| | Graph a Quadratic Function Using Transformations • Identify the Vertex and Axis of Symmetry of a Quadratic Function • Graph a Quadratic Function Using Its Vertex, Axis, and Intercepts • Find a Quadratic Function Given Its Vertex and One Other Point • Find the Maximum or Minimum Value of a Quadratic Function | |
| 3.4 | Build Quadratic Models from Verbal Descriptions and from Data | 160 |
| | Build Quadratic Models from Verbal Descriptions • Build Quadratic Models from Data | |
| 3.5 | Inequalities Involving Quadratic Functions | 170 |
| | Solve Inequalities Involving a Quadratic Function | |
| | Chapter Review | 174 |
| | Chapter Test | 177 |
| | Cumulative Review | 178 |
| | Chapter Projects | 179 |

4 Polynomial and Rational Functions **180**

| | | |
|------------|---|------------|
| 4.1 | Polynomial Functions and Models | 181 |
| | Identify Polynomial Functions and Their Degree • Graph Polynomial Functions Using Transformations • Identify the Real Zeros of a Polynomial Function and Their Multiplicity • Analyze the Graph of a Polynomial Function • Build Cubic Models from Data | |

| | | |
|------------|---|------------|
| 4.2 | The Real Zeros of a Polynomial Function | 201 |
| | Use the Remainder and Factor Theorems • Use Descartes' Rule of Signs to Determine the Number of Positive and the Number of Negative Real Zeros of a Polynomial Function • Use the Rational Zeros Theorem to List the Potential Rational Zeros of a Polynomial Function • Find the Real Zeros of a Polynomial Function • Solve Polynomial Equations • Use the Theorem for Bounds on Zeros • Use the Intermediate Value Theorem | |
| 4.3 | Complex Zeros; Fundamental Theorem of Algebra | 216 |
| | Use the Conjugate Pairs Theorem • Find a Polynomial Function with Specified Zeros • Find the Complex Zeros of a Polynomial Function | |
| 4.4 | Properties of Rational Functions | 220 |
| | Find the Domain of a Rational Function • Find the Vertical Asymptotes of a Rational Function • Find the Horizontal or Oblique Asymptote of a Rational Function | |
| 4.5 | The Graph of a Rational Function | 232 |
| | Analyze the Graph of a Rational Function • Solve Applied Problems Involving Rational Functions | |
| 4.6 | Polynomial and Rational Inequalities | 243 |
| | Solve Polynomial Inequalities Algebraically and Graphically • Solve Rational Inequalities Algebraically and Graphically | |
| | Chapter Review | 250 |
| | Chapter Test | 254 |
| | Cumulative Review | 254 |
| | Chapter Projects | 255 |
| 5 | Exponential and Logarithmic Functions | 257 |
| 5.1 | Composite Functions | 258 |
| | Form a Composite Function • Find the Domain of a Composite Function | |
| 5.2 | One-to-One Functions; Inverse Functions | 266 |
| | Determine Whether a Function Is One-to-One • Determine the Inverse of a Function Defined by a Map or a Set of Ordered Pairs • Obtain the Graph of the Inverse Function from the Graph of the Function • Find the Inverse of a Function Defined by an Equation | |
| 5.3 | Exponential Functions | 278 |
| | Evaluate Exponential Functions • Graph Exponential Functions • Define the Number e • Solve Exponential Equations | |
| 5.4 | Logarithmic Functions | 295 |
| | Change Exponential Statements to Logarithmic Statements and Logarithmic Statements to Exponential Statements • Evaluate Logarithmic Expressions • Determine the Domain of a Logarithmic Function • Graph Logarithmic Functions • Solve Logarithmic Equations | |
| 5.5 | Properties of Logarithms | 308 |
| | Work with the Properties of Logarithms • Write a Logarithmic Expression as a Sum or Difference of Logarithms • Write a Logarithmic Expression as a Single Logarithm • Evaluate a Logarithm Whose Base Is Neither 10 Nor e • Graph a Logarithmic Function Whose Base Is Neither 10 Nor e | |
| 5.6 | Logarithmic and Exponential Equations | 317 |
| | Solve Logarithmic Equations • Solve Exponential Equations • Solve Logarithmic and Exponential Equations Using a Graphing Utility | |

| | | |
|------------|--|------------|
| 5.7 | Financial Models | 325 |
| | Determine the Future Value of a Lump Sum of Money • Calculate Effective Rates of Return • Determine the Present Value of a Lump Sum of Money • Determine the Rate of Interest or the Time Required to Double a Lump Sum of Money | |
| 5.8 | Exponential Growth and Decay Models; Newton's Law; Logistic Growth and Decay Models | 334 |
| | Find Equations of Populations That Obey the Law of Uninhibited Growth • Find Equations of Populations That Obey the Law of Decay • Use Newton's Law of Cooling • Use Logistic Models | |
| 5.9 | Building Exponential, Logarithmic, and Logistic Models from Data | 345 |
| | Build an Exponential Model from Data • Build a Logarithmic Model from Data • Build a Logistic Model from Data | |
| | Chapter Review | 354 |
| | Chapter Test | 359 |
| | Cumulative Review | 360 |
| | Chapter Projects | 361 |
| 6 | Trigonometric Functions | 362 |
| 6.1 | Angles and Their Measure | 363 |
| | Convert between Decimal and Degree, Minute, Second Measures for Angles • Find the Length of an Arc of a Circle • Convert from Degrees to Radians and from Radians to Degrees • Find the Area of a Sector of a Circle • Find the Linear Speed of an Object Traveling in Circular Motion | |
| 6.2 | Trigonometric Functions: Unit Circle Approach | 377 |
| | Find the Exact Values of the Trigonometric Functions Using a Point on the Unit Circle • Find the Exact Values of the Trigonometric Functions of Quadrantal Angles • Find the Exact Values of the Trigonometric Functions of $\frac{\pi}{4} = 45^\circ$ • Find the Exact Values of the Trigonometric Functions of $\frac{\pi}{6} = 30^\circ$ and $\frac{\pi}{3} = 60^\circ$ • Find the Exact Values of the Trigonometric Functions for Integer Multiples of $\frac{\pi}{6} = 30^\circ$, $\frac{\pi}{4} = 45^\circ$, and $\frac{\pi}{3} = 60^\circ$ • Use a Calculator to Approximate the Value of a Trigonometric Function • Use a Circle of Radius r to Evaluate the Trigonometric Functions | |
| 6.3 | Properties of the Trigonometric Functions | 394 |
| | Determine the Domain and the Range of the Trigonometric Functions • Determine the Period of the Trigonometric Functions • Determine the Signs of the Trigonometric Functions in a Given Quadrant • Find the Values of the Trigonometric Functions Using Fundamental Identities • Find the Exact Values of the Trigonometric Functions of an Angle Given One of the Functions and the Quadrant of the Angle • Use Even–Odd Properties to Find the Exact Values of the Trigonometric Functions | |
| 6.4 | Graphs of the Sine and Cosine Functions | 408 |
| | Graph Functions of the Form $y = A \sin(\omega x)$ Using Transformations • Graph Functions of the Form $y = A \cos(\omega x)$ Using Transformations • Determine the Amplitude and Period of Sinusoidal Functions • Graph Sinusoidal Functions Using Key Points • Find an Equation for a Sinusoidal Graph | |
| 6.5 | Graphs of the Tangent, Cotangent, Cosecant, and Secant Functions | 423 |
| | Graph Functions of the Form $y = A \tan(\omega x) + B$ and $y = A \cot(\omega x) + B$ • Graph Functions of the Form $y = A \csc(\omega x) + B$ and $y = A \sec(\omega x) + B$ | |

| | | |
|------------|--|------------|
| 6.6 | Phase Shift; Sinusoidal Curve Fitting | 431 |
| | Graph Sinusoidal Functions of the Form $y = A \sin(\omega x - \phi) + B$ • Build Sinusoidal Models from Data | |
| | Chapter Review | 442 |
| | Chapter Test | 448 |
| | Cumulative Review | 449 |
| | Chapter Projects | 450 |

7 Analytic Trigonometry **451**

| | | |
|------------|--|------------|
| 7.1 | The Inverse Sine, Cosine, and Tangent Functions | 452 |
| | Find the Exact Value of an Inverse Sine Function • Find an Approximate Value of an Inverse Sine Function • Use Properties of Inverse Functions to Find Exact Values of Certain Composite Functions • Find the Inverse Function of a Trigonometric Function • Solve Equations Involving Inverse Trigonometric Functions | |
| 7.2 | The Inverse Trigonometric Functions (Continued) | 466 |
| | Find the Exact Value of Expressions Involving the Inverse Sine, Cosine, and Tangent Functions • Define the Inverse Secant, Cosecant, and Cotangent Functions • Use a Calculator to Evaluate $\sec^{-1}x$, $\csc^{-1}x$, and $\cot^{-1}x$ • Write a Trigonometric Expression as an Algebraic Expression | |
| 7.3 | Trigonometric Equations | 472 |
| | Solve Equations Involving a Single Trigonometric Function • Solve Trigonometric Equations Using a Calculator • Solve Trigonometric Equations Quadratic in Form • Solve Trigonometric Equations Using Fundamental Identities • Solve Trigonometric Equations Using a Graphing Utility | |
| 7.4 | Trigonometric Identities | 482 |
| | Use Algebra to Simplify Trigonometric Expressions • Establish Identities | |
| 7.5 | Sum and Difference Formulas | 490 |
| | Use Sum and Difference Formulas to Find Exact Values • Use Sum and Difference Formulas to Establish Identities • Use Sum and Difference Formulas Involving Inverse Trigonometric Functions • Solve Trigonometric Equations Linear in Sine and Cosine | |
| 7.6 | Double-angle and Half-angle Formulas | 502 |
| | Use Double-angle Formulas to Find Exact Values • Use Double-angle Formulas to Establish Identities • Use Half-angle Formulas to Find Exact Values | |
| 7.7 | Product-to-Sum and Sum-to-Product Formulas | 513 |
| | Express Products as Sums • Express Sums as Products | |
| | Chapter Review | 517 |
| | Chapter Test | 520 |
| | Cumulative Review | 520 |
| | Chapter Projects | 521 |

8 Applications of Trigonometric Functions **522**

| | | |
|------------|--|------------|
| 8.1 | Right Triangle Trigonometry; Applications | 523 |
| | Find the Value of Trigonometric Functions of Acute Angles Using Right Triangles • Use the Complementary Angle Theorem • Solve Right Triangles • Solve Applied Problems | |

| | | |
|------------|--|------------|
| 8.2 | The Law of Sines | 536 |
| | Solve SAA or ASA Triangles • Solve SSA Triangles • Solve Applied Problems | |
| 8.3 | The Law of Cosines | 546 |
| | Solve SAS Triangles • Solve SSS Triangles • Solve Applied Problems | |
| 8.4 | Area of a Triangle | 553 |
| | Find the Area of SAS Triangles • Find the Area of SSS Triangles | |
| 8.5 | Simple Harmonic Motion; Damped Motion; Combining Waves | 560 |
| | Build a Model for an Object in Simple Harmonic Motion • Analyze Simple Harmonic Motion • Analyze an Object in Damped Motion • Graph the Sum of Two Functions | |
| | Chapter Review | 569 |
| | Chapter Test | 572 |
| | Cumulative Review | 573 |
| | Chapter Projects | 574 |
| 9 | Polar Coordinates; Vectors | 576 |
| 9.1 | Polar Coordinates | 577 |
| | Plot Points Using Polar Coordinates • Convert from Polar Coordinates to Rectangular Coordinates • Convert from Rectangular Coordinates to Polar Coordinates • Transform Equations between Polar and Rectangular Forms | |
| 9.2 | Polar Equations and Graphs | 586 |
| | Identify and Graph Polar Equations by Converting to Rectangular Equations • Graph Polar Equations Using a Graphing Utility • Test Polar Equations for Symmetry • Graph Polar Equations by Plotting Points | |
| 9.3 | The Complex Plane; De Moivre's Theorem | 602 |
| | Plot Points in the Complex Plane • Convert a Complex Number between Rectangular Form and Polar Form • Find Products and Quotients of Complex Numbers in Polar Form • Use De Moivre's Theorem • Find Complex Roots | |
| 9.4 | Vectors | 610 |
| | Graph Vectors • Find a Position Vector • Add and Subtract Vectors Algebraically • Find a Scalar Multiple and the Magnitude of a Vector • Find a Unit Vector • Find a Vector from Its Direction and Magnitude • Model with Vectors | |
| 9.5 | The Dot Product | 625 |
| | Find the Dot Product of Two Vectors • Find the Angle between Two Vectors • Determine Whether Two Vectors Are Parallel • Determine Whether Two Vectors Are Orthogonal • Decompose a Vector into Two Orthogonal Vectors • Compute Work | |
| 9.6 | Vectors in Space | 632 |
| | Find the Distance between Two Points in Space • Find Position Vectors in Space • Perform Operations on Vectors • Find the Dot Product • Find the Angle between Two Vectors • Find the Direction Angles of a Vector | |
| 9.7 | The Cross Product | 642 |
| | Find the Cross Product of Two Vectors • Know Algebraic Properties of the Cross Product • Know Geometric Properties of the Cross Product • Find a Vector Orthogonal to Two Given Vectors • Find the Area of a Parallelogram | |
| | Chapter Review | 648 |
| | Chapter Test | 651 |
| | Cumulative Review | 652 |
| | Chapter Projects | 652 |

| | | |
|---|--|------------|
| 10 | Analytic Geometry | 653 |
| <hr/> | | |
| 10.1 Conics | | 654 |
| | Know the Names of the Conics | |
| <hr/> | | |
| 10.2 The Parabola | | 655 |
| | Analyze Parabolas with Vertex at the Origin • Analyze Parabolas with Vertex at (h, k) • Solve Applied Problems Involving Parabolas | |
| <hr/> | | |
| 10.3 The Ellipse | | 665 |
| | Analyze Ellipses with Center at the Origin • Analyze Ellipses with Center at (h, k) • Solve Applied Problems Involving Ellipses | |
| <hr/> | | |
| 10.4 The Hyperbola | | 676 |
| | Analyze Hyperbolas with Center at the Origin • Find the Asymptotes of a Hyperbola • Analyze Hyperbolas with Center at (h, k) • Solve Applied Problems Involving Hyperbolas | |
| <hr/> | | |
| 10.5 Rotation of Axes; General Form of a Conic | | 690 |
| | Identify a Conic • Use a Rotation of Axes to Transform Equations • Analyze an Equation Using a Rotation of Axes • Identify Conics without a Rotation of Axes | |
| <hr/> | | |
| 10.6 Polar Equations of Conics | | 698 |
| | Analyze and Graph Polar Equations of Conics • Convert the Polar Equation of a Conic to a Rectangular Equation | |
| <hr/> | | |
| 10.7 Plane Curves and Parametric Equations | | 704 |
| | Graph Parametric Equations by Hand • Graph Parametric Equations Using a Graphing Utility • Find a Rectangular Equation for a Curve Defined Parametrically • Use Time as a Parameter in Parametric Equations • Find Parametric Equations for Curves Defined by Rectangular Equations | |
| <hr/> | | |
| Chapter Review | | 718 |
| Chapter Test | | 720 |
| Cumulative Review | | 721 |
| Chapter Projects | | 722 |
| <hr/> | | |
| 11 | Systems of Equations and Inequalities | 723 |
| <hr/> | | |
| 11.1 Systems of Linear Equations: Substitution and Elimination | | 724 |
| | Solve Systems of Equations by Substitution • Solve Systems of Equations by Elimination • Identify Inconsistent Systems of Equations Containing Two Variables • Express the Solution of a System of Dependent Equations Containing Two Variables • Solve Systems of Three Equations Containing Three Variables • Identify Inconsistent Systems of Equations Containing Three Variables • Express the Solution of a System of Dependent Equations Containing Three Variables | |
| <hr/> | | |
| 11.2 Systems of Linear Equations: Matrices | | 739 |
| | Write the Augmented Matrix of a System of Linear Equations • Write the System of Equations from the Augmented Matrix • Perform Row Operations on a Matrix • Solve a System of Linear Equations Using Matrices | |
| <hr/> | | |
| 11.3 Systems of Linear Equations: Determinants | | 755 |
| | Evaluate 2 by 2 Determinants • Use Cramer's Rule to Solve a System of Two Equations Containing Two Variables • Evaluate 3 by 3 Determinants • Use Cramer's Rule to Solve a System of Three Equations Containing Three Variables • Know Properties of Determinants | |
| <hr/> | | |
| 11.4 Matrix Algebra | | 765 |
| | Find the Sum and Difference of Two Matrices • Find Scalar Multiples of a Matrix • Find the Product of Two Matrices • Find the Inverse of a Matrix • Solve a System of Linear Equations Using an Inverse Matrix | |
| <hr/> | | |

| | |
|--|------------|
| 11.5 Partial Fraction Decomposition | 782 |
| Decompose $\frac{P}{Q}$ Where Q Has Only Nonrepeated Linear Factors • Decompose $\frac{P}{Q}$ Where Q Has Repeated Linear Factors • Decompose $\frac{P}{Q}$ Where Q Has a Nonrepeated Irreducible Quadratic Factor • Decompose $\frac{P}{Q}$ Where Q Has a Repeated Irreducible Quadratic Factor | |
| 11.6 Systems of Nonlinear Equations | 790 |
| Solve a System of Nonlinear Equations Using Substitution • Solve a System of Nonlinear Equations Using Elimination | |
| 11.7 Systems of Inequalities | 800 |
| Graph an Inequality by Hand • Graph an Inequality Using a Graphing Utility • Graph a System of Inequalities | |
| 11.8 Linear Programming | 809 |
| Set Up a Linear Programming Problem • Solve a Linear Programming Problem | |
| Chapter Review | 816 |
| Chapter Test | 820 |
| Cumulative Review | 821 |
| Chapter Projects | 822 |
| 12 Sequences; Induction; the Binomial Theorem | 823 |
| 12.1 Sequences | 824 |
| Write the First Several Terms of a Sequence • Write the Terms of a Sequence Defined by a Recursive Formula • Use Summation Notation • Find the Sum of a Sequence Algebraically and Using a Graphing Utility • Solve Annuity and Amortization Problems | |
| 12.2 Arithmetic Sequences | 837 |
| Determine Whether a Sequence Is Arithmetic • Find a Formula for an Arithmetic Sequence • Find the Sum of an Arithmetic Sequence | |
| 12.3 Geometric Sequences; Geometric Series | 844 |
| Determine Whether a Sequence Is Geometric • Find a Formula for a Geometric Sequence • Find the Sum of a Geometric Sequence • Determine Whether a Geometric Series Converges or Diverges | |
| 12.4 Mathematical Induction | 854 |
| Prove Statements Using Mathematical Induction | |
| 12.5 The Binomial Theorem | 858 |
| Evaluate $\binom{n}{j}$ • Use the Binomial Theorem | |
| Chapter Review | 864 |
| Chapter Test | 867 |
| Cumulative Review | 867 |
| Chapter Projects | 868 |
| 13 Counting and Probability | 869 |
| 13.1 Counting | 870 |
| Find All the Subsets of a Set • Count the Number of Elements in a Set • Solve Counting Problems Using the Multiplication Principle | |

| | |
|--|------------|
| 13.2 Permutations and Combinations | 875 |
| Solve Counting Problems Using Permutations Involving n Distinct Objects • Solve Counting Problems Using Combinations • Solve Counting Problems Using Permutations Involving n Nondistinct Objects | |
| 13.3 Probability | 884 |
| Construct Probability Models • Compute Probabilities of Equally Likely Outcomes • Find Probabilities of the Union of Two Events • Use the Complement Rule to Find Probabilities | |
| Chapter Review | 894 |
| Chapter Test | 896 |
| Cumulative Review | 897 |
| Chapter Projects | 897 |

14 A Preview of Calculus: The Limit, Derivative, and Integral of a Function **899**

| | |
|--|------------|
| 14.1 Finding Limits Using Tables and Graphs | 900 |
| Find a Limit Using a Table • Find a Limit Using a Graph | |
| 14.2 Algebra Techniques for Finding Limits | 905 |
| Find the Limit of a Sum, a Difference, and a Product • Find the Limit of a Polynomial • Find the Limit of a Power or a Root • Find the Limit of a Quotient • Find the Limit of an Average Rate of Change | |
| 14.3 One-sided Limits; Continuous Functions | 912 |
| Find the One-sided Limits of a Function • Determine Whether a Function Is Continuous | |
| 14.4 The Tangent Problem; The Derivative | 919 |
| Find an Equation of the Tangent Line to the Graph of a Function • Find the Derivative of a Function • Find Instantaneous Rates of Change • Find the Instantaneous Velocity of a Particle | |
| 14.5 The Area Problem; The Integral | 927 |
| Approximate the Area Under the Graph of a Function • Approximate Integrals Using a Graphing Utility | |
| Chapter Review | 934 |
| Chapter Test | 936 |
| Chapter Projects | 937 |

A Review **A1**

| | |
|--|------------|
| A.1 Algebra Essentials | A1 |
| Work with Sets • Graph Inequalities • Find Distance on the Real Number Line • Evaluate Algebraic Expressions • Determine the Domain of a Variable • Use the Laws of Exponents • Evaluate Square Roots • Use a Calculator to Evaluate Exponents | |
| A.2 Geometry Essentials | A14 |
| Use the Pythagorean Theorem and Its Converse • Know Geometry Formulas • Understand Congruent Triangles and Similar Triangles | |
| A.3 Polynomials | A22 |
| Recognize Monomials • Recognize Polynomials • Know Formulas for Special Products • Divide Polynomials Using Long Division • Factor Polynomials • Complete the Square | |

| | |
|--|------------|
| A.4 Synthetic Division | A31 |
| Divide Polynomials Using Synthetic Division | |
| A.5 Rational Expressions | A35 |
| Reduce a Rational Expression to Lowest Terms • Multiply and Divide Rational Expressions • Add and Subtract Rational Expressions • Use the Least Common Multiple Method • Simplify Complex Rational Expressions | |
| A.6 Solving Equations | A43 |
| Solve Linear Equations • Solve Rational Equations • Solve Quadratic Equations by Factoring • Solve Quadratic Equations Using the Square Root Method • Solve Quadratic Equations by Completing the Square • Solve Quadratic Equations Using the Quadratic Formula • Solve Equations Quadratic in Form • Solve Absolute Value Equations • Solve Equations by Factoring | |
| A.7 Complex Numbers; Quadratic Equations in the Complex Number System | A57 |
| Add, Subtract, Multiply, and Divide Complex Numbers • Solve Quadratic Equations in the Complex Number System | |
| A.8 Problem Solving: Interest, Mixture, Uniform Motion, Constant Rate Job Applications | A65 |
| Translate Verbal Descriptions into Mathematical Expressions • Solve Interest Problems • Solve Mixture Problems • Solve Uniform Motion Problems • Solve Constant Rate Job Problems | |
| A.9 Interval Notation; Solving Inequalities | A76 |
| Use Interval Notation • Use Properties of Inequalities • Solve Inequalities • Solve Combined Inequalities • Solve Inequalities Involving Absolute Value | |
| A.10 nth Roots; Rational Exponents | A86 |
| Work with n th Roots • Simplify Radicals • Rationalize Denominators • Solve Radical Equations • Simplify Expressions with Rational Exponents | |
| B The Limit of a Sequence; Infinite Series | B1 |
| Answers | AN1 |
| Credits | C1 |
| Subject Index | I1 |

Three Distinct Series

Students have different goals, learning styles, and levels of preparation. Instructors have different teaching philosophies, styles, and techniques. Rather than write one series to fit all, the Sullivans have written three distinct series. All share the same goal—to develop a high level of mathematical understanding and an appreciation for the way mathematics can describe the world around us. The manner of reaching that goal, however, differs from series to series.

Enhanced with Graphing Utilities Series, Seventh Edition

This series provides a thorough integration of graphing utilities into topics, allowing students to explore mathematical concepts and encounter ideas usually studied in later courses. Using technology, the approach to solving certain problems differs from the Contemporary or Concepts through Functions Series, while the emphasis on understanding concepts and building strong skills does not: *College Algebra, Algebra & Trigonometry, Precalculus*.

Contemporary Series, Tenth Edition

The Contemporary Series is the most traditional in approach, yet modern in its treatment of precalculus mathematics. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor: *College Algebra, Algebra & Trigonometry, Trigonometry: A Unit Circle Approach, Precalculus*.

Concepts through Functions Series, Third Edition

This series differs from the others, utilizing a functions approach that serves as the organizing principle tying concepts together. Functions are introduced early in various formats. This approach supports the Rule of Four, which states that functions are represented symbolically, numerically, graphically, and verbally. Each chapter introduces a new type of function and then develops all concepts pertaining to that particular function. The solutions of equations and inequalities, instead of being developed as stand-alone topics, are developed in the context of the underlying functions. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor: *College Algebra; Precalculus, with a Unit Circle Approach to Trigonometry; Precalculus, with a Right Triangle Approach to Trigonometry*.

The Enhanced with Graphing Utilities Series

College Algebra

This text provides an approach to college algebra that completely integrates graphing technology without sacrificing mathematical analysis and conceptualization. The text has three chapters of review material preceding the chapters on functions. After completing this text, a student will be prepared for trigonometry, finite mathematics, and business calculus.

Algebra & Trigonometry

This text contains all the material in *College Algebra*, but it also develops the trigonometric functions using a right triangle approach and shows how that approach is related to the unit circle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Graphing calculator usage is integrated throughout. After completing this text, a student will be prepared for finite mathematics, business calculus, and engineering calculus.

Precalculus

This text contains one review chapter before covering the traditional precalculus topics of functions and their graphs, polynomial and rational functions, and exponential and logarithmic functions. The trigonometric functions are introduced using a unit circle approach and show how it is related to the right triangle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Graphing calculator usage is integrated throughout. The final chapter provides an introduction to calculus, with a discussion of the limit, the derivative, and the integral of a function. After completing this text, a student will be prepared for finite mathematics, business calculus, and engineering calculus.

Preface to the Instructor

As professors at an urban university and a community college, Michael Sullivan and Michael Sullivan III are aware of the varied needs of Precalculus students. Such students range from those who have little mathematical background and are fearful of mathematics courses, to those with a strong mathematical education and a high level of motivation. For some of your students, this will be their last course in mathematics, whereas others will further their mathematical education. We have written this text with both groups in mind.

As a teacher, and as an author of precalculus, engineering calculus, finite mathematics, and business calculus texts, Michael Sullivan understands what students must know if they are to be focused and successful in upper-level math courses. However, as a father of four, he also understands the realities of college life. As an author of a developmental mathematics series, Michael's son and co-author, Michael Sullivan III, understands the trepidations and skills that students bring to the Precalculus course. As the father of a current college student, Michael III realizes that today's college students demand a variety of media to support their education. This text addresses that demand by providing technology and video support that enhances understanding without sacrificing math skills. Together, both authors have taken great pains to ensure that the text offers solid, student-friendly examples and problems, as well as a clear and seamless writing style.

A tremendous benefit of authoring a successful series is the broad-based feedback we receive from teachers and students. We are sincerely grateful for their support. Virtually every change in this edition is the result of their thoughtful comments and suggestions. We are confident that, building on the success of the first six editions and incorporating many of these suggestions, we have made *Precalculus Enhanced with Graphing Utilities*, 7th Edition, an even better tool for learning and teaching. We continue to encourage you to share with us your experiences teaching from this text.

Features in the Seventh Edition

A descriptive list of the many special features of *Precalculus* can be found in the front of this text.

This list places the features in their proper context, as building blocks of an overall learning system that has been carefully crafted over the years to help students get the most out of the time they put into studying. Please take the time to review this and to discuss it with your students at the beginning of your course. When students utilize these features, they are more successful in the course.

New to the Seventh Edition

- **Retain Your Knowledge** This new category of problems in the exercise set is based on the article “To Retain

New Learning, Do the Math” published in the *Edurati Review*. In this article, Kevin Washburn suggests that “the more students are required to recall new content or skills, the better their memory will be.” It is frustrating when students cannot recall skills learned earlier in the course. To alleviate this recall problem, we have created “Retain Your Knowledge” problems. These are problems considered to be “final exam material” that students can use to maintain their skills. All the answers to these problems appear in the back of the text, and all are programmed in MyMathLab.

- **Guided Lecture Notes** Ideal for online, emporium/redesign courses, inverted classrooms, or traditional lecture classrooms. These lecture notes help students take thorough, organized, and understandable notes as they watch the Author in Action videos. They ask students to complete definitions, procedures, and examples based on the content of the videos and text. In addition, experience suggests that students learn by doing and understanding the why/how of the concept or property. Therefore, many sections have an exploration activity to motivate student learning. These explorations introduce the topic and/or connect it to either a real-world application or a previous section. For example, when the vertical-line test is discussed in Section 2.2, after the theorem statement, the notes ask the students to explain why the vertical-line test works by using the definition of a function. This challenge helps students process the information at a higher level of understanding.
- **Illustrations** Many of the figures now have captions to help connect the illustrations to the explanations in the body of the text.
- **TI Screen Shots** In this edition we have replaced all the screen shots from the sixth edition with screen shots using TI-84 Plus C. These updated screen shots help students visualize concepts clearly and help make stronger connections among equations, data, and graphs in full color.
- **Exercise Sets** All the exercises in the text have been reviewed and analyzed for this edition, some have been removed, and new ones have been added. All time-sensitive problems have been updated to the most recent information available. The problem sets remain classified according to purpose.

The “*Are You Prepared?*” problems have been improved to better serve their purpose as a just-in-time review of concepts that the student will need to apply in the upcoming section.

The *Concepts and Vocabulary* problems have been expanded and now include multiple-choice exercises. Together with the fill-in-the-blank and true/false problems, these exercises have been written to serve as reading quizzes.

Skill Building problems develop the student's computational skills with a large selection of exercises that are directly related to the objectives of the section. **Mixed Practice** problems offer a comprehensive assessment of skills that relate to more than one objective. Often these require skills learned earlier in the course.

Applications and Extensions problems have been updated. Further, many new application-type exercises have been added, especially ones involving information and data drawn from sources the student will recognize, to improve relevance and timeliness.

The **Explaining Concepts: Discussion and Writing** exercises have been improved and expanded to provide more opportunity for classroom discussion and group projects.

New to this edition, **Retain Your Knowledge** exercises consist of a collection of four problems in each exercise set that are based on material learned earlier in the course. They serve to keep information that has already been learned “fresh” in the mind of the student. Answers to all these problems appear in the Student Edition.

The **Review Exercises** in the Chapter Review have been streamlined, but they remain tied to the clearly expressed objectives of the chapter. Answers to all these problems appear in the Student Edition.

- **Annotated Instructor's Edition** As a guide, the author's suggestions for homework assignments are indicated by a blue underscore below the problem number. These problems are assignable in MyMathLab.

Content Changes in the Seventh Edition

- **Section 2.1** The objective Find the Difference Quotient of a Function has been added.
- **Section 4.2** The objective Use Descartes' Rule of Signs has been included.
- **Section 4.2** The theorem Bounds on the Zeros of a Polynomial Function is now based on the traditional method of using synthetic division.
- **Section 4.5** Content has been added that discusses the role of multiplicity of the zeros of the denominator of a rational function as it relates to the graph near a vertical asymptote.

Using the Seventh Edition Effectively with Your Syllabus

To meet the varied needs of diverse syllabi, this text contains more content than is likely to be covered in a *Precalculus* course. As the chart illustrates, this text has been organized with flexibility of use in mind. Within a given chapter, certain sections are optional (see the details that follow the accompanying figure) and can be omitted without loss of continuity.

Chapter 1 Graphs

A quick coverage of this chapter, which is mainly review material, will enable you to get to Chapter 2, “Functions and Their Graphs”, earlier.

Chapter 2 Functions and Their Graphs

Perhaps the most important chapter. Section 2.6 is optional.

Chapter 3 Linear and Quadratic Functions

Topic selection depends on your syllabus. Sections 3.2 and 3.4 may be omitted without a loss of continuity.

Chapter 4 Polynomial and Rational Functions

Topic selection depends on your syllabus.

Chapter 5 Exponential and Logarithmic Functions

Sections 5.1–5.6 follow in sequence. Sections 5.7, 5.8, and 5.9 are optional.

Chapter 6 Trigonometric Functions

Section 6.6 may be omitted in a brief course.

Chapter 7 Analytic Trigonometry

Sections 7.2 and 7.7 may be omitted in a brief course.

Chapter 8 Applications of Trigonometric Functions

Sections 8.4 and 8.5 may be omitted in a brief course.

Chapter 9 Polar Coordinates; Vectors

Sections 9.1–9.3 and Sections 9.4–9.7 are independent and may be covered separately.

Chapter 10 Analytic Geometry

Sections 10.1–10.4 follow in sequence. Sections 10.5, 10.6, and 10.7 are independent of each other, but each requires Sections 10.1–10.4.

Chapter 11 Systems of Equations and Inequalities

Sections 11.2–11.7 may be covered in any order, but each requires Section 11.1. Section 11.8 is optional but requires Section 11.7.

Chapter 12 Sequences; Induction; The Binomial Theorem

There are three independent parts: Sections 12.1–12.3; Section 12.4; and Section 12.5.

Chapter 13 Counting and Probability

The sections follow in sequence.

Chapter 14 A Preview of Calculus: The Limit, Derivative, and Integral of a Function

If time permits, coverage of this chapter will provide your student with a beneficial head-start in calculus. The sections follow in sequence.

Appendix A Review

This chapter consists of review material. It may be used as the first part of the course or later as a just-in-time review when the content is required. Specific references to this chapter occur throughout the book to assist in the review process.

Appendix B The Limit of a Sequence; Infinite Series

This section represents a more thorough treatment of sequences and series.

Acknowledgments

Texts are written by authors, but they evolve from idea to final form through the efforts of many people.

Thanks are due to the following people for their assistance and encouragement during the preparation of this edition:

- From Pearson Education: Anne Kelly for her substantial contributions, ideas, and enthusiasm; Dawn Murrin, for her unmatched talent at getting the details right; Joseph Colella for always getting the reviews and pages to us on time; Peggy McMahon for directing the always difficult production process; Rose Kernan for handling liaison between the compositor and author; Peggy Lucas for her genuine interest in marketing this text; Chris Hoag for her continued support and genuine interest; Paul Corey for his leadership and commitment to excellence; and the Pearson Math and Science Sales team for their continued confidence and personal support of our texts.

- Accuracy checkers: C. Brad Davis read the entire manuscript and checked the accuracy of answers. His attention to detail is amazing. Timothy Britt created the Solutions Manuals and accuracy-checked answers.

- Michael Sullivan III would like to thank his colleagues at Joliet Junior College for their support and feedback.

Finally, we offer our sincere thanks to the dedicated users and reviewers of our texts, whose collective insights form the backbone of each text revision.

The list of those to whom we are indebted continues to grow. If we've forgotten anyone, please accept our apology. Thank you to all.

Get the most out of MyMathLab[®]

MyMathLab is the world's leading online resource for teaching and learning mathematics. MyMathLab helps students and instructors improve results, and provides engaging experiences and personalized learning for each student so learning can happen in any environment. Plus, it offers flexible and time-saving course management features to allow instructors to easily manage their classes while remaining in complete control, regardless of course format.

Personalized Support for Students

- MyMathLab comes with many learning resources—eText, animations, videos, and more—all designed to support your students as they progress through their course.
- The Adaptive Study Plan acts as a personal tutor, updating in real time based on student performance to provide personalized recommendations on what to work on next. With the new Companion Study Plan assignments, instructors can now assign the Study Plan as a prerequisite to a test or quiz, helping to guide students through concepts they need to master.
- Personalized Homework allows instructors to create homework assignments tailored to each student's specific needs, focused on just the topics they have not yet mastered.

Used by nearly 4 million students each year, the MyMathLab and MyStatLab family of products delivers consistent, measurable gains in student learning outcomes, retention, and subsequent course success.

Resources for Success

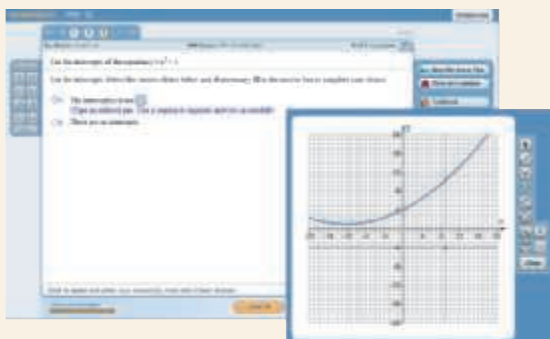

MyMathLab® Online Course for the Enhanced with Graphing Utilities, Series, 7th ed., by Michael Sullivan and Michael Sullivan III
(access code required)

MyMathLab delivers proven results in helping individual students succeed. The author team, led by Michael Sullivan and Michael Sullivan III, has developed specific content in MyMathLab to ensure quality resources are available to help foster success in mathematics – and beyond! The MyMathLab features described here will help:

- Review math skills and forgotten concepts
- Retain new concepts while moving through the course
- Develop skills that will help with the transition to college

Supportive Exercise Sets

With *Getting Ready* content students refresh prerequisite topics through assignable skill review quizzes and personalized homework. *New video assessment questions* are tied to key Author in Action videos to check students' conceptual understanding of important math concepts. *Guided Visualizations* help students better understand the visual aspects of key concepts in figure format. The figures are included in MyMathLab as both a teaching and an assignable learning tool.

Encourage Retention

New *Retain Your Knowledge* quizzes promote ongoing review at the course level and help students maintain essential skills. New functionality within the graphing utility allows graphing of 3-point quadratic functions, 4-point cubic graphs, and transformations in exercises.

Boost Study Skills

Skills for Success Modules are integrated with MyMathLab courses to help students succeed in collegiate courses and prepare for future professions. Topics such as “Time Management,” “Stress Management” and “Financial Literacy” are available for you to assign to your students.

Resources for Success

Instructor Resources

Additional resources can be downloaded from www.mymathlab.com or www.pearsonhighered.com or hardcopy resources can be ordered from your sales representative.

Annotated Instructor Edition

Includes all answers to the exercises sets. Shorter answers are on the page beside the exercises, and longer answers are in the back of the text. Sample homework assignments are indicated by a blue underline within each end-of-section exercise set and may be assigned in MyMathLab.

Instructor's Solutions Manual

Includes fully worked solutions to all exercises in the text.

Mini Lecture Notes

This guide includes additional examples and helpful teaching tips, by section.

PowerPoint® Lecture Slides

These files contain fully editable slides correlated with the text.

Test Gen®

Test Gen® (www.pearsoned.com/testgen) enables instructor to build, edit, print, and administer tests using a computerized bank of question developed to cover all the objectives of the text.

Online Chapter Projects

Additional projects that give students an opportunity to apply what they learned in the chapter.

Student Resources

Additional resources to promote student success:

Lecture Videos

Author in Action videos are actual classroom lectures with fully worked-out examples presented by Michael Sullivan III. All video is assignable in MyMathLab.

Chapter Test Prep Videos

Students can watch instructors work through step-by-step solutions to all chapter test exercises from the text. These are available in MyMathLab and on YouTube.

Student Solutions Manual

Provides detailed worked-out solutions to odd-numbered exercises.

Guided Lecture Notes

These lecture notes assist students in taking thorough, organized, and understandable notes while watching Author in Action videos. Students actively participate in learning the how/why of important concepts through explorations and activities. The Guided Lecture Notes are available as pdfs and customizable Word files in MyMathLab. They can also be packaged with the text and MyMathLab access code.

Algebra Review

Four Chapters of Intermediate Algebra review. Perfect for a slower-paced course or for individual review.

Applications Index

Acoustics

amplifying sound, 357
loudness of sound, 307
loudspeaker, 567
tuning fork, 567, 568
whispering galleries, 672–673

Aerodynamics

modeling aircraft motion, 652

Agriculture

farm management, 815
field enclosure, 798
grazing area for cow, 558–559
maximizing profit, 815
number of farm workers, 344
removing stump, 624

Air travel

bearing of aircraft, 533, 543
bearing of airplane, 530
frequent flyer miles, 543
holding pattern, 422, 480
lift, 576
parking at O'Hare International Airport, 103
revising a flight plan, 551
speed and direction of aircraft, 618–619, 622

Archeology

age of ancient tools, 337–338
age of fossil, 343
age of tree, 343
date of prehistoric man's death, 358

Architecture

brick staircase, 843, 866
Burj Khalifa building, A15
Flatiron Building, 558
floor design, 841, 866
football stadium seating, 843
mosaic design, 843, 866
Norman window, 167, A20
parabolic arch, 167
racetrack design, 675
special window, 167
stadium construction, 843
window design, 167

Area

of Bermuda Triangle, 558
under a curve, 465
of isosceles triangle, 511
of sector of circle, 373
of segment of circle, 570

Art

fine decorative pieces, 392

Astronomy

angle of elevation of sun, 532
distances of planets from sun, 836
Hale-Bopp comet orbit, 653, 722
planetary orbits, 672
 Earth, 675
 elliptical, 675
 Jupiter, 675
 Mars, 675
 Mercury, 704
 Neptune, 722
 Pluto, 675, 722
radius of the moon, 393

Aviation

modeling aircraft motion, 652
orbital launches, 736
range of plane, A75
speed of plane, A75

Biology

alcohol and driving, 303, 308
bacterial growth, 335–336, 350
 E. coli, 93, 132–133
blood types, 874
bone length, 176
cricket chirp rate and temperature, 169
healing of wounds, 292, 307
maternal age versus Down syndrome, 147
muscle force, 623
yeast biomass as function of time, 349

Business

advertising, 176
automobile production, 264, 753
blending coffee, A73
car rentals, 138–139
checkout lines, 893
clothing store, 895
cookie orders, 819–820
cost
 of can, 239–240, 242
 of commodity, 265
 of manufacturing, 249, 808, A13, A73
 marginal, 158–159, 176
 minimizing, 176
 minimum average, 92
 of production, 264, 780, 820
 of transporting goods, 104
cost equation, 42–43
cost function, 139
 average, 75
demand
 for jeans, 147
demand equation, 175, 177, 255
depreciation, 257
discounts, 265
drive-thru rate
 at Burger King, 288–289

 at Citibank, 293, 307
 at McDonald's, 293
equipment depreciation, 852
expense computation, A74
Jiffy Lube's car arrival rate, 293, 307
managing a meat market, 815
milk production, 351
mixing candy, A73
mixing nuts, A73
new-car markup, A85
orange juice production, 753
precision ball bearings, A13
presale orders, 736
price vs. quantity demanded, 139
product design, 816
production scheduling, 815
product promotion, 43
profit, 780–781
 maximizing, 813–816
profit function, 71
rate of return on, 332
restaurant management, 736
revenue, 159, 173, A73
 airline, 816
 of clothing store, 769–770
 daily, 159
 from digital music, 117
 instantaneous rate of change of, 927, 936
 maximizing, 158, 166, 177
 monthly, 159
 from online advertising, 353
 price and, 148–149
 from stadium seating, 853
 theater, 737
salary, 843
 gross, 70
 increases in, 852, 866
sales
 commission on, 175, A84
 of movie theater ticket, 724, 728–729, 736
 net, 17
 profit from, A75
salvage value, 358
straight-line depreciation, 135–136, 139
supply and demand, 136–137, 139
tax, 249
toy truck manufacturing, 808
transporting goods, 808
truck rentals, 42, 140
unemployment, 896
wages
 of car salesperson, 43

Calculus

area under a curve, 117, 465
area under graph, 92
carrying a ladder around a corner, 480
geometric series, 200
maximizing rain gutter construction, 511

projectile motion, 480
Simpson's rule, 167

Carpentry

pitch, 44

Cartography

Lewis and Clark expedition, 522, 574

Chemistry

acid solution, 736
alpha particles, 689
decomposition reactions, 343
drug concentration, 241
ethanol production, 350
pH, 306
purity of gold, A74
radioactive decay, 342, 343, 350–351, 358
radioactivity from Chernobyl, 343
reactions, 167
salt solutions, A74
sugar molecules, A74
volume of gas, A84

Combinatorics

airport codes, 876
binary codes, 895
birthday permutations, 878, 882, 889–890, 894, 896
blouses and skirts combinations, 874
book arrangements, 882
box stacking, 882
code formation, 882
combination locks, 883
committee formation, 880, 882, 896
 Senate committees, 883
flag arrangement, 881, 895
letter codes, 876–877, 896
license plate possibilities, 882, 895, 896
lining up people, 877, 882
number formation, 874, 882, 896
objects selection, 883
seating arrangements, 895
shirts and ties combinations, 874
telephone numbers, 895
two-symbol codewords, 873
word formation, 880–881, 883

Communications

cell phone towers, 352
installing cable TV, 122
international calling, 140
phone charges, 139
satellite dish, 661, 663
social networking, 345, 351
spreading of rumors, 293, 307
tablet service, 103
Touch-Tone phones, 516, 568
wireless data plan, 56, 92–93, 128–129

Computers and computing

graphics, 624, 781–782
home, 344

iPod memory capacity, 140
laser printers, A74
Microsoft Word users, 344
mind mapping software, 451, 521
social networking, 344–345
three-click rule, 781
website map, 781

Construction

of box, 798, A72, A75
 closed, 126
 open, 122
of brick staircase, 866
of can, 253
of coffee can, A75
of cylindrical tube, 798
of enclosures
 around garden, A74
 around pond, A74
 maximizing area of, 162, 166, 175
of fencing, 162, 166, 175, 798
 minimum cost for, 242
of flashlight, 663
of garden walk, 449
of headlight, 663
of highway, 533, 544, 571
installing cable TV, 122
pitch of roof, 534
of rain gutter, 167, 385, 511, 524–525
of ramp, 543
 access ramp, 43
of rectangular field enclosure, 166
of stadium, 167, 843
of steel drum, 242
of swimming pool, A20, A21
of swing set, 552
of tent, 557
TV dish, 663
vent pipe installation, 675

Cryptography

matrices in, 781

Decorating

Christmas tree, A16

Demographics

age of women and birth rate, 169
birthrate of unmarried women, 159
diversity index, 306
divorced population, 164–165
life expectancy, A84
marital status, 875
mosquito colony growth, 342
population of world, future of, 937–938
poverty rates, 199
rabbit colony growth, 835

Design

of awning, 545
of box with minimum surface area, 242
of fine decorative pieces, 392

of Little League Field, 376
of water sprinkler, 374

Direction

of aircraft, 618–619, 622
compass heading, 623
for crossing a river, 622
of fireworks display, 688
of lightning strikes, 688
of motorboat, 622
of swimmer, 651

Distance

Bermuda Triangle, A21
bicycle riding, 80
from Chicago to Honolulu, 465
circumference of Earth, 375–376
between cities, 369–370, 374
between Earth and Mercury, 545
between Earth and Venus, 545
from Earth to a star, 532
of explosion, 689
as function of time, 119–120, 121
height
 of aircraft, 543, 545
 of bouncing ball, 852, 866
 of bridge, 543
 of building, 532, 533
 of cloud, 528
 of Eiffel Tower, 532
 of embankment, 533
 of Ferris wheel rider, 480
 of Ferris wheel seat, 422
 of Great Pyramid of Cheops, 545, A21
 of helicopter, 571
 of hot-air balloon, 533
 of Lincoln's caricature on Mt. Rushmore, 533
 of mountain, 540, 543
 of statue on a building, 528–529
 of tower, 534
 of tree, 393, 543
 of Washington Monument, 533
 of Willis Tower, 533
from home, 80
from Honolulu to Melbourne, Australia, 465
of hot-air balloon
 to airport, 572
 from intersection, 17
from intersection, 119–120
length
 of guy wire, 551
 of mountain trail, 533
 of ski lift, 543
limiting magnitude of telescope, 358
mapmaking, 522, 574
to the Moon, 544
nautical miles, 375
parallax, 532–533
pendulum swings, 849, 852
to plateau, 532
across a pond, 532
range of airplane, A75

reach of ladder, 532
of rotating beacon, 430–431
between runners, 543
at sea, 544, 571
to shore, 532, 544, 570
between skyscrapers, 534, 535
stopping, 71, 159
to tower, 545
traveled by wheel, A20
between two moving vehicles, 17
 toward intersection, 119–120, 121
between two objects, 532, 533
viewing, 393
visibility of Gibb's Hill Lighthouse beam,
 529–530, 535, A21
visual, A21
walking, 80
width
 of gorge, 531
 of Mississippi River, 534
 of river, 527, 570

Economics

annual earning of young adults, 723
Consumer Price Index (CPI), 333
demand equations, 255
federal stimulus package of 2009, 332
inflation, 332–333
IS-LM model in, 737
marginal propensity to consume, 853
multiplier, 853
participation rate, 71
per capita federal debt, 332
poverty rates, 199
poverty threshold, 17
relative income of child, 781
unemployment, 896

Education

age distribution of community college, 896
college admission, 896
college costs, 332, 780
course choice, 896
degrees awarded, 872
doctorate degrees awarded, 893
faculty composition, 894
field trip, 250
funding a college education, 358
grade computation, A85
IQ tests, A85
learning curve, 294, 307
maximum level achieved, 822
multiple-choice test, 882
Spring break, 815
student loan, 127
 interest on, 780
true/false test, 882
tuition increases, 358
video games and grade-point average, 146

Electricity

alternating current (ac), 447, 501
alternating current (ac) circuits, 421, 440

alternating current (ac) generators, 421–422
charging a capacitor, 568
cost of, 101–102
current in *RC* circuit, 294
current in *RL* circuit, 294, 307
impedance, A65
Kirchhoff's Rules, 737, 754
parallel circuits, A65
 resistance in, 231
rates for, A84
resistance, 231, A42
voltage
 foreign, A13
 U.S., A13

Electronics

Blu-ray drive, 374
DVD drive, 374
loudspeakers, 567
microphones, 25
sawtooth curve, 511, 568

Energy

nuclear power plant, 688
solar, 25, 630–631
solar heat, 664
thermostat control, 116–117

Engineering

bridges
 clearance, 422
 Golden Gate, 163–164
 parabolic arch, 176, 664
 semielliptical arch, 674–675, 720
 suspension, 167, 663
drive wheel, 571
Gateway Arch (St. Louis), 664
grade of road, 44
lean of Leaning Tower of Pisa, 544
moment of inertia, 516
piston engines, 392
product of inertia, 511
road system, 585
robotic arm, 641
rods and pistons, 552
searchlight, 489, 663, 720
whispering galleries, 675

Entertainment

cable subscribers, 352
Demon Roller Coaster customer rate, 293
movie theater, 464
theater revenues, 737

Environment

lake pollution control laws, 835
oil leakage, 264

Exercise and fitness

for weight loss, A84

Finance

annuity, 852

balancing a checkbook, A13
beta of stock, 130, 179
bills in wallet, 896
clothes shopping, 821
college costs, 332
computer system purchase, 332
cost
 of driving car, 43
 of electricity, 101–102
 of fast food, 736
 minimizing, 176, 242
 of natural gas, 104
 of transatlantic travel, 70–71, 79
 of triangular lot, 557
 of vehicle rental, 104, 177
cost function, 139
cost minimization, 158–159
credit cards
 balance on, 789
 debt, 835
 interest on, 332
 payment, 105, 835
depreciation, 292
 of car, 324, 361
discounts, 265
division of money, A67–A68, A73
education savings account, 835
electricity rates, 43
federal income tax, A84
federal stimulus package of 2009, 332
financial planning, 736, 749–750, 753, 808,
 809, 816, A67–A68, A73
foreign exchange, 265
funding a college education, 358
future value of money, 200
gross salary, 70
international calling charges, 140

How to Value a House

Two things to consider in valuing a home are, first, how does it compare to similar homes that have sold recently? Is the asking price fair? And second, what value do you place on the advertised features and amenities? Yes, other people might value them highly, but do you?

Zestimate home valuation, RealestateABC.com, and Reply.com are among the many algorithmic (generated by a computer model) starting points in figuring out the value of a home. They show you how the home is priced relative to other homes in the area, but you need to add in all the things that only someone who has seen the house knows. You can do that using My Estimator, and then you create your own estimate and see how it stacks up against the asking price.

Looking at “Comps”

Knowing whether an asking price is fair will be important when you’re ready to make an offer on a house. It will be even more important when your mortgage lender hires an appraiser to determine whether the house is worth the loan you’re after.

Check with your agent, Zillow.com, propertyshark.com, or other websites to see recent sales of homes in the area that are similar, or comparable, to what you’re looking for. Print them out and keep these “comps” in a three-ring binder; you’ll be referring to them quite a bit.

Note that “recent sales” usually means within the last six months. A sales price from a year ago may bear little or no relation to what is going on in your area right now. In fact, some lenders will not accept comps older than three months.

Market activity also determines how easy or difficult it is to find accurate comps. In a “hot” or busy market, with sales happening all the time, you’re likely to have lots of comps to choose from. In a less active market, finding reasonable comps becomes harder. And if the home you’re looking at has special design features, finding a comparable property is harder still. It’s also necessary to know what’s going on in a given sub-segment. Maybe large, high-end homes are selling like hotcakes, but owners of smaller houses are staying put, or vice versa.

••• A Look Back

Appendix A reviews algebra essentials, geometry essentials, and equations in one variable.

A Look Ahead •••

Here we connect algebra and geometry using the rectangular coordinate system. In the 1600s, algebra had developed sufficiently so that René Descartes (1596–1650) and Pierre de Fermat (1601–1665) were able to use rectangular coordinates to translate geometry problems into algebra problems, and vice versa. This allowed both geometers and algebraists to gain new insights into their subjects, which were thought to be separate, but now were seen as connected.

1.1 The Distance and Midpoint Formulas; Graphing Utilities; Introduction to Graphing Equations

PREPARING FOR THIS SECTION Before getting started, review the following:

- Algebra Essentials (Appendix A, Section A.1, pp. A1–A10)
- Geometry Essentials (Appendix A, Section A.2, pp. A14–A18)

 Now Work the 'Are You Prepared?' problems on page 13.

- OBJECTIVES**
- 1 Use the Distance Formula (p. 4)
 - 2 Use the Midpoint Formula (p. 6)
 - 3 Graph Equations by Plotting Points (p. 7)
 - 4 Graph Equations Using a Graphing Utility (p. 9)
 - 5 Use a Graphing Utility to Create Tables (p. 11)
 - 6 Find Intercepts from a Graph (p. 12)
 - 7 Use a Graphing Utility to Approximate Intercepts (p. 12)

Rectangular Coordinates

We locate a point on the real number line by assigning it a single real number, called the *coordinate of the point*. For work in a two-dimensional plane, points are located by using two numbers.

Begin with two real number lines located in the same plane: one horizontal and the other vertical. The horizontal line is called the **x-axis**, the vertical line the **y-axis**, and the point of intersection the **origin** O . See Figure 1. Assign coordinates to every point on these number lines using a convenient scale. Recall that the scale of a number line is the distance between 0 and 1. In mathematics, we usually use the same scale on each axis, but in applications, different scales appropriate to the application may be used.

The origin O has a value of 0 on both the x -axis and y -axis. Points on the x -axis to the right of O are associated with positive real numbers, and those to the left of O are associated with negative real numbers. Points on the y -axis above O are associated with positive real numbers, and those below O are associated with negative real numbers. In Figure 1, the x -axis and y -axis are labeled as x and y , respectively, and we have used an arrow at the end of each axis to denote the positive direction.

The coordinate system described here is called a **rectangular** or **Cartesian*** **coordinate system**. The plane formed by the x -axis and y -axis is sometimes called the **xy-plane**, and the x -axis and y -axis are referred to as the **coordinate axes**.

Any point P in the xy -plane can be located by using an **ordered pair** (x, y) of real numbers. Let x denote the signed distance of P from the y -axis (*signed* means that, if P is to the right of the y -axis, then $x > 0$, and if P is to the left of the y -axis, then $x < 0$); and let y denote the signed distance of P from the x -axis. The ordered pair (x, y) , also called the **coordinates** of P , gives us enough information to locate the point P in the plane.

For example, to locate the point whose coordinates are $(-3, 1)$, go 3 units along the x -axis to the left of O and then go straight up 1 unit. We **plot** this point by placing a dot at this location. See Figure 2, in which the points with coordinates $(-3, 1)$, $(-2, -3)$, $(3, -2)$, and $(3, 2)$ are plotted.

The origin has coordinates $(0, 0)$. Any point on the x -axis has coordinates of the form $(x, 0)$, and any point on the y -axis has coordinates of the form $(0, y)$.

If (x, y) are the coordinates of a point P , then x is called the **x-coordinate**, or **abscissa**, of P and y is the **y-coordinate**, or **ordinate**, of P . We identify the point P using its coordinates (x, y) by writing $P = (x, y)$. Usually, we will simply say “the point (x, y) ” rather than “the point whose coordinates are (x, y) .”

Figure 1 xy -Plane

Figure 2

*Named after René Descartes (1596–1650), a French mathematician, philosopher, and theologian.

Figure 3

Figure 4 $Y_1 = 2x$ 

Figure 5 Viewing window

The coordinate axes divide the xy -plane into four sections called **quadrants**, as shown in Figure 3. In quadrant I, both the x -coordinate and the y -coordinate of all points are positive; in quadrant II, x is negative and y is positive; in quadrant III, both x and y are negative; and in quadrant IV, x is positive and y is negative. Points on the coordinate axes belong to no quadrant.

Now Work PROBLEM 15

Graphing Utilities

All graphing utilities (graphing calculators and computer software graphing packages) graph equations by plotting points on a screen. The screen itself actually consists of small rectangles, called **pixels**. The more pixels the screen has, the better the resolution. Most graphing calculators have 50 to 100 pixels per square inch; most smartphones have 300 to 450 pixels per square inch. When a point to be plotted lies inside a pixel, the pixel is turned on (lights up). The graph of an equation is a collection of lighted pixels. Figure 4 shows how the graph of $y = 2x$ looks on a TI-84 Plus C graphing calculator.

The screen of a graphing utility will display the coordinate axes of a rectangular coordinate system. However, the scale must be set on each axis. The smallest and largest values of x and y to be included in the graph must also be set. This is called **setting the viewing rectangle** or **viewing window**. Figure 5 illustrates a typical viewing window.

To set the viewing window, values must be given to the following expressions:

- X_{\min} : the smallest value of x shown on the viewing window
- X_{\max} : the largest value of x shown on the viewing window
- X_{sc} : the number of units per tick mark on the x -axis
- Y_{\min} : the smallest value of y shown on the viewing window
- Y_{\max} : the largest value of y shown on the viewing window
- Y_{sc} : the number of units per tick mark on the y -axis

Figure 6 illustrates these settings and their relation to the Cartesian coordinate system.

Figure 6

If the scale used on each axis is known, the minimum and maximum values of x and y shown on the screen can be determined by counting the tick marks. Look again at Figure 5. For a scale of 1 on each axis, the minimum and maximum values of x are -10 and 10 , respectively; the minimum and maximum values of y are also -10 and 10 . If the scale is 2 on each axis, then the minimum and maximum values of x are -20 and 20 , respectively; and the minimum and maximum values of y are -20 and 20 , respectively.

Conversely, if the minimum and maximum values of x and y are known, the scales can be determined by counting the tick marks displayed. This text follows the practice of showing the minimum and maximum values of x and y in illustrations

Figure 7

so that the reader will know how the viewing window was set. See Figure 7, from which the following window settings can be determined:

$$\begin{aligned} X_{\min} &= -3 & Y_{\min} &= -4 \\ X_{\max} &= 3 & Y_{\max} &= 4 \\ X_{\text{scl}} &= 1 & Y_{\text{scl}} &= 2 \end{aligned}$$

 **Now Work** PROBLEMS 19 AND 29

1 Use the Distance Formula

If the same units of measurement (such as inches, centimeters, and so on) are used for both the x -axis and y -axis, then all distances in the xy -plane can be measured using this unit of measurement.

EXAMPLE 1

Finding the Distance between Two Points

Find the distance d between the points $(1, 3)$ and $(5, 6)$.

Solution

First plot the points $(1, 3)$ and $(5, 6)$ and connect them with a straight line. See Figure 8(a). To find the length d , begin by drawing a horizontal line from $(1, 3)$ to $(5, 3)$ and a vertical line from $(5, 3)$ to $(5, 6)$, forming a right triangle, as in Figure 8(b). One leg of the triangle is of length 4 (since $|5 - 1| = 4$) and the other is of length 3 (since $|6 - 3| = 3$). By the Pythagorean Theorem, the square of the distance d that we seek is

$$\begin{aligned} d^2 &= 4^2 + 3^2 = 16 + 9 = 25 \\ d &= \sqrt{25} = 5 \end{aligned}$$

Figure 8

The **distance formula** provides a straightforward method for computing the distance between two points.

THEOREM

Distance Formula

The distance between two points $P_1 = (x_1, y_1)$ and $P_2 = (x_2, y_2)$, denoted by $d(P_1, P_2)$, is

$$d(P_1, P_2) = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \quad (1)$$

Figure 9 illustrates the theorem.

Figure 9 Illustration of the Distance Formula

Proof of the Distance Formula Let (x_1, y_1) denote the coordinates of point P_1 , and let (x_2, y_2) denote the coordinates of point P_2 . Assume that the line joining P_1 and P_2 is neither horizontal nor vertical. Refer to Figure 10(a). The coordinates of P_3 are (x_2, y_1) . The horizontal distance from P_1 to P_3 is the absolute value of

In Words

To compute the distance between two points, find the difference of the x -coordinates, square it, and add this to the square of the difference of the y -coordinates. The square root of this sum is the distance.

the difference of the x -coordinates, $|x_2 - x_1|$. The vertical distance from P_3 to P_2 is the absolute value of the difference of the y -coordinates, $|y_2 - y_1|$. See Figure 10(b). The distance $d(P_1, P_2)$ is the length of the hypotenuse of the right triangle, so, by the Pythagorean Theorem, it follows that

$$\begin{aligned} [d(P_1, P_2)]^2 &= |x_2 - x_1|^2 + |y_2 - y_1|^2 \\ &= (x_2 - x_1)^2 + (y_2 - y_1)^2 \\ d(P_1, P_2) &= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \end{aligned}$$

Figure 10

Now, if the line joining P_1 and P_2 is horizontal, then the y -coordinate of P_1 equals the y -coordinate of P_2 ; that is, $y_1 = y_2$. Refer to Figure 11(a). In this case, the distance formula (1) still works, because, for $y_1 = y_2$, it reduces to

$$d(P_1, P_2) = \sqrt{(x_2 - x_1)^2 + 0^2} = \sqrt{(x_2 - x_1)^2} = |x_2 - x_1|$$

Figure 11

A similar argument holds if the line joining P_1 and P_2 is vertical. See Figure 11(b). ■

EXAMPLE 2**Finding the Length of a Line Segment**

Find the length of the line segment shown in Figure 12.

Solution

The length of the line segment is the distance between the points $P_1 = (x_1, y_1) = (-4, 5)$ and $P_2 = (x_2, y_2) = (3, 2)$. Using the distance formula (1) with $x_1 = -4$, $y_1 = 5$, $x_2 = 3$, and $y_2 = 2$, the length d is

$$\begin{aligned} d &= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} = \sqrt{[3 - (-4)]^2 + (2 - 5)^2} \\ &= \sqrt{7^2 + (-3)^2} = \sqrt{49 + 9} = \sqrt{58} \approx 7.62 \end{aligned}$$

 **Now Work** PROBLEM 35

Figure 12

The distance between two points $P_1 = (x_1, y_1)$ and $P_2 = (x_2, y_2)$ is never a negative number. Also, the distance between two points is 0 only when the points are identical—that is, when $x_1 = x_2$ and $y_1 = y_2$. Also, because $(x_2 - x_1)^2 = (x_1 - x_2)^2$ and $(y_2 - y_1)^2 = (y_1 - y_2)^2$, it makes no difference whether the distance is computed from P_1 to P_2 or from P_2 to P_1 ; that is, $d(P_1, P_2) = d(P_2, P_1)$.

The introduction to this chapter mentioned that rectangular coordinates enable us to translate geometry problems into algebra problems, and vice versa. The next example shows how algebra (the distance formula) can be used to solve geometry problems.

EXAMPLE 3**Using Algebra to Solve Geometry Problems**

Consider the three points $A = (-2, 1)$, $B = (2, 3)$, and $C = (3, 1)$.

- Plot each point and form the triangle ABC .
- Find the length of each side of the triangle.
- Verify that the triangle is a right triangle.
- Find the area of the triangle.

Solution

- Figure 13 shows the points A, B, C and the triangle ABC .
- To find the length of each side of the triangle, use the distance formula (1).

$$d(A, B) = \sqrt{[2 - (-2)]^2 + (3 - 1)^2} = \sqrt{16 + 4} = \sqrt{20} = 2\sqrt{5}$$

$$d(B, C) = \sqrt{(3 - 2)^2 + (1 - 3)^2} = \sqrt{1 + 4} = \sqrt{5}$$

$$d(A, C) = \sqrt{[3 - (-2)]^2 + (1 - 1)^2} = \sqrt{25 + 0} = 5$$

- If the sum of the squares of the lengths of two of the sides equals the square of the length of the third side, the triangle is a right triangle. (Why is this sufficient?) Looking at Figure 13, it seems reasonable to conjecture that the angle at vertex B might be a right angle. We shall check to see whether

$$[d(A, B)]^2 + [d(B, C)]^2 = [d(A, C)]^2$$

Using the results from part (b),

$$\begin{aligned} [d(A, B)]^2 + [d(B, C)]^2 &= (2\sqrt{5})^2 + (\sqrt{5})^2 \\ &= 20 + 5 = 25 = [d(A, C)]^2 \end{aligned}$$

It follows from the converse of the Pythagorean Theorem that triangle ABC is a right triangle.

- Because the right angle is at vertex B , the sides AB and BC form the base and height of the triangle. Its area is

$$\text{Area} = \frac{1}{2}(\text{Base})(\text{Height}) = \frac{1}{2}(2\sqrt{5})(\sqrt{5}) = 5 \text{ square units} \quad \blacksquare$$

Figure 13

 **Now Work** PROBLEM 51 **2 Use the Midpoint Formula**

We now derive a formula for the coordinates of the **midpoint of a line segment**. Let $P_1 = (x_1, y_1)$ and $P_2 = (x_2, y_2)$ be the endpoints of a line segment, and let $M = (x, y)$ be the point on the line segment that is the same distance from P_1 as it is from P_2 . See Figure 14. The triangles P_1AM and MBP_2 are congruent. [Do you see why? Angle $AP_1M =$ angle BMP_2 ,* angle $P_1MA =$ angle MP_2B , and $d(P_1, M) = d(M, P_2)$ is given. So, we have angle-side-angle.] Hence, corresponding sides are equal in length. That is,

$$x - x_1 = x_2 - x \quad \text{and} \quad y - y_1 = y_2 - y$$

$$2x = x_1 + x_2 \quad 2y = y_1 + y_2$$

$$x = \frac{x_1 + x_2}{2} \quad y = \frac{y_1 + y_2}{2}$$

Figure 14 Illustration of midpoint

*A postulate from geometry states that the transversal $\overline{P_1P_2}$ forms congruent corresponding angles with the parallel line segments $\overline{P_1A}$ and \overline{MB} .

THEOREM

Midpoint Formula

The midpoint $M = (x, y)$ of the line segment from $P_1 = (x_1, y_1)$ to $P_2 = (x_2, y_2)$ is

$$M = (x, y) = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right) \quad (2)$$

In Words

To find the midpoint of a line segment, average the x -coordinates of the endpoints, and average the y -coordinates of the endpoints.

EXAMPLE 4

Finding the Midpoint of a Line Segment

Find the midpoint of a line segment from $P_1 = (-5, 5)$ to $P_2 = (3, 1)$. Plot the points P_1 and P_2 and their midpoint.

Solution

Apply the midpoint formula (2) using $x_1 = -5$, $y_1 = 5$, $x_2 = 3$, and $y_2 = 1$. Then the coordinates (x, y) of the midpoint M are

$$x = \frac{x_1 + x_2}{2} = \frac{-5 + 3}{2} = -1 \quad \text{and} \quad y = \frac{y_1 + y_2}{2} = \frac{5 + 1}{2} = 3$$

That is, $M = (-1, 3)$. See Figure 15.

 **Now Work** PROBLEM 57

Figure 15

3 Graph Equations by Plotting Points

An **equation in two variables**, say x and y , is a statement in which two expressions involving x and y are equal. The expressions are called the **sides** of the equation. Since an equation is a statement, it may be true or false, depending on the value of the variables. Any values of x and y that result in a true statement are said to **satisfy** the equation.

For example, the following are all equations in two variables x and y :

$$x^2 + y^2 = 5 \quad 2x - y = 6 \quad y = 2x + 5 \quad x^2 = y$$

The first of these, $x^2 + y^2 = 5$, is satisfied for $x = 1$, $y = 2$, since $1^2 + 2^2 = 5$. Other choices of x and y , such as $x = -1$, $y = -2$, also satisfy this equation. It is not satisfied for $x = 2$ and $y = 3$, since $2^2 + 3^2 = 4 + 9 = 13 \neq 5$.

The **graph of an equation in two variables** x and y consists of the set of points in the xy -plane whose coordinates (x, y) satisfy the equation.

Graphs play an important role in helping us to visualize the relationships that exist between two variables or quantities. Figure 16 shows the relation between the

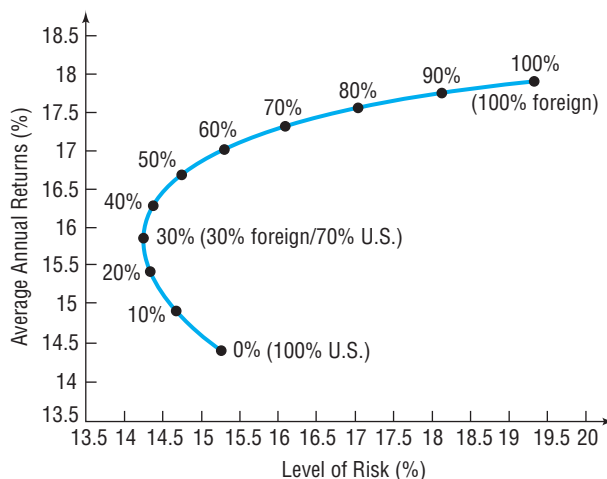

Figure 16

level of risk in a stock portfolio and the average annual rate of return. The graph shows that, when 30% of a portfolio of stocks is invested in foreign companies, risk is minimized.

EXAMPLE 5**Determining Whether a Point Is on the Graph of an Equation**

Determine whether each of the following points is on the graph of the equation $2x - y = 6$.

- (a) $(2, 3)$ (b) $(2, -2)$

Solution

- (a) For the point $(2, 3)$, check to see whether $x = 2$, $y = 3$ satisfies the equation $2x - y = 6$.

$$2x - y = 2(2) - 3 = 4 - 3 = 1 \neq 6$$

The equation is not satisfied, so the point $(2, 3)$ is not on the graph of $2x - y = 6$.

- (b) For the point $(2, -2)$,

$$2x - y = 2(2) - (-2) = 4 + 2 = 6$$

The equation is satisfied, so the point $(2, -2)$ is on the graph of $2x - y = 6$. ■

 **Now Work** PROBLEM 65
EXAMPLE 6**Graphing an Equation by Plotting Points**

Graph the equation: $y = -2x + 3$

Step-by-Step Solution

Step 1: Find some points (x, y) that satisfy the equation. To determine these points, choose values of x and use the equation to find the corresponding values for y . See Table 1.

Table 1

| x | $y = -2x + 3$ | (x, y) |
|-----|------------------|-----------|
| -2 | $-2(-2) + 3 = 7$ | $(-2, 7)$ |
| -1 | $-2(-1) + 3 = 5$ | $(-1, 5)$ |
| 0 | $-2(0) + 3 = 3$ | $(0, 3)$ |
| 1 | $-2(1) + 3 = 1$ | $(1, 1)$ |
| 2 | $-2(2) + 3 = -1$ | $(2, -1)$ |

Step 2: Plot the points listed in the table as shown in Figure 17(a). Now connect the points to obtain the graph of the equation (a line), as shown in Figure 17(b).

Figure 17

EXAMPLE 7**Graphing an Equation by Plotting Points**

Graph the equation: $y = x^2$

Solution

Table 2 provides several points on the graph. Plotting these points and connecting them with a smooth curve gives the graph (a *parabola*) shown in Figure 18.

Table 2

| x | $y = x^2$ | (x, y) |
|-----|-----------|------------|
| -4 | 16 | $(-4, 16)$ |
| -3 | 9 | $(-3, 9)$ |
| -2 | 4 | $(-2, 4)$ |
| -1 | 1 | $(-1, 1)$ |
| 0 | 0 | $(0, 0)$ |
| 1 | 1 | $(1, 1)$ |
| 2 | 4 | $(2, 4)$ |
| 3 | 9 | $(3, 9)$ |
| 4 | 16 | $(4, 16)$ |

Figure 18 $y = x^2$

The graphs of the equations shown in Figures 17(b) and 18 do not show all the points that are on the graph. For example, in Figure 17(b), the point $(20, -37)$ is a part of the graph of $y = -2x + 3$, but it is not shown. Since the graph of $y = -2x + 3$ could be extended out as far as we please, we use arrows to indicate that the pattern shown continues. It is important when illustrating a graph to present enough of the graph so that any viewer of the illustration will “see” the rest of it as an obvious continuation of what is actually there. This is referred to as a **complete graph**.

One way to obtain a complete graph of an equation is to continue plotting points on the graph until a pattern becomes evident. Then these points are connected with a smooth curve following the suggested pattern. But how many points are sufficient? Sometimes knowledge about the equation tells us. For example, we will learn in Section 1.4 that if an equation is of the form $y = mx + b$, then its graph is a line. In this case, two points would suffice to obtain the graph.

One purpose of this text is to investigate the properties of equations in order to decide whether a graph is complete. Sometimes we shall graph equations by plotting points on the graph until a pattern becomes evident and then connect these points with a smooth curve, following the suggested pattern. (Shortly, we shall investigate various techniques that will enable us to graph an equation without plotting so many points.) Other times we shall graph equations using a graphing utility.

4 Graph Equations Using a Graphing Utility

From Examples 6 and 7, we see that a graph can be obtained by plotting points in a rectangular coordinate system and connecting them. Graphing utilities perform these same steps when graphing an equation. For example, the TI-84 Plus C determines 265 evenly spaced input values (starting at X_{\min} and ending at X_{\max}),* uses the equation to determine the output values, plots these points on the screen, and finally (if in the connected mode) draws a line between consecutive points.

To graph an equation in two variables x and y using a graphing utility requires that the equation be written in the form $y = \{\text{expression in } x\}$. If the original equation is not in this form, rewrite it using equivalent equations until the form $y = \{\text{expression in } x\}$ is obtained. In general, there are four ways to obtain equivalent equations.

Procedures That Result in Equivalent Equations

1. Interchange the two sides of the equation:

$$3x + 5 = y \quad \text{is equivalent to} \quad y = 3x + 5$$

2. Simplify the sides of the equation by combining like terms, eliminating parentheses, and so on:

$$2y + 2 + 6 = 2x + 5(x + 1) \quad \text{is equivalent to} \quad 2y + 8 = 7x + 5$$

*These input values depend on the values of X_{\min} and X_{\max} . For example, if $X_{\min} = -10$ and $X_{\max} = 10$, then the first input value will be -10 and the next input value will be $-10 + (10 - (-10))/264 = -9.9242$, and so on.
