

SULLIVAN

ALGEBRA & TRIGONOMETRY

ELEVENTH EDITION

Get the Most Out of MyLab Math

MyLab™ Math is the teaching and learning platform that empowers instructors to reach every student. By combining trusted author content with digital tools and a flexible platform, MyLab Math personalizes the learning experience and improves results for each student.

- **Flexible platform**—Your course is unique. Whether you’d like to build your own assignments, teach many sections, or set prerequisites, you have flexibility to easily create *your* course to fit *your* needs.
- **Personalized learning**—Each student learns at a different pace. Personalized learning pinpoints the areas each student needs to practice, giving every student the support they need — when and where they need it — to be successful. A variety of options to personalize learning in MyLab Math:
 - With **Companion Study Plan Assignments** you can assign the Study Plan as a prerequisite to a test or quiz, guiding students through the concepts they need to master.
 - With **Personalized Homework**, students take a quiz or test and receive a subsequent homework assignment that is personalized based on their performance. This way, students can focus on just the topics they have not yet mastered.

Homework Overview [Legend](#)  

Name Chapter 1 Homework
 Last Worked 10/14/15 3:26pm
 Current Score 42.86% (3 points out of 7)
 This homework will **not** affect your Study Plan score.
 Number of times you can complete each question: unlimited

 **Changes made here WILL affect your score.** [Go to Results to practice without affecting your score.](#)

▶ You received automatic credit (3 pts) for topics you mastered on Chapter 1 Skills Check Quiz.
 ▶ You only need to work on questions that are links below.

Questions: 7	Scored: 3	Correct: 3	Partial Credit: 0	Incorrect: 0
✓ Question 1 (1/1)	Question 2 (0/1)	Question 3 (0/1)		
✓ Question 4 (1/1)	Question 5 (0/1)	✓ Question 6 (1/1)		
Question 7 (0/1)				

To see what to study next, go to your [Study Plan](#).

To the Student

As you begin, you may feel anxious about the number of theorems, definitions, procedures, and equations. You may wonder if you can learn it all in time. Don't worry—your concerns are normal. This textbook was written with you in mind. If you attend class, work hard, and read and study this text, you will build the knowledge and skills you need to be successful. Here's how you can use the text to your benefit.

Read Carefully

When you get busy, it's easy to skip reading and go right to the problems. Don't ... the text has a large number of examples and clear explanations to help you break down the mathematics into easy-to-understand steps. Reading will provide you with a clearer understanding, beyond simple memorization. Read before class (not after) so you can ask questions about anything you didn't understand. You'll be amazed at how much more you'll get out of class if you do this.

Use the Features

I use many different methods in the classroom to communicate. Those methods, when incorporated into the text, are called "features." The features serve many purposes, from providing timely review of material you learned before (just when you need it) to providing organized review sessions to help you prepare for quizzes and tests. Take advantage of the features and you will master the material.

To make this easier, we've provided a brief guide to getting the most from this text. Refer to "Prepare for Class," "Practice," and "Review" at the front of the text. Spend fifteen minutes reviewing the guide and familiarizing yourself with the features by flipping to the page numbers provided. Then, as you read, use them. This is the best way to make the most of your text.

Please do not hesitate to contact me through Pearson Education, with any questions, comments, or suggestions for improving this text. I look forward to hearing from you, and good luck with all of your studies.

Best Wishes!

Michael Sullivan

Prepare for Class “Read the Book”

Feature	Description	Benefit	Page
Every Chapter Opener begins with . . .			
Chapter-Opening Topic & Project	Each chapter begins with a discussion of a topic of current interest and ends with a related project.	The Project lets you apply what you learned to solve a problem related to the topic.	414
 Internet-Based Projects	The projects allow for the integration of spreadsheet technology that you will need to be a productive member of the workforce.	The projects give you an opportunity to collaborate and use mathematics to deal with issues of current interest.	516
Every Section begins with . . .			
LEARNING OBJECTIVES 	Each section begins with a list of objectives. Objectives also appear in the text where the objective is covered.	These focus your study by emphasizing what’s most important and where to find it.	435
Sections contain . . .			
PREPARING FOR THIS SECTION	Most sections begin with a list of key concepts to review with page numbers.	Ever forget what you’ve learned? This feature highlights previously learned material to be used in this section. Review it, and you’ll always be prepared to move forward.	435
Now Work the ‘Are You Prepared?’ Problems	Problems that assess whether you have the prerequisite knowledge for the upcoming section.	Not sure you need the Preparing for This Section review? Work the ‘Are You Prepared?’ problems. If you get one wrong, you’ll know exactly what you need to review and where to review it!	435, 446
 Now Work PROBLEMS	These follow most examples and direct you to a related exercise.	We learn best by doing. You’ll solidify your understanding of examples if you try a similar problem right away, to be sure you understand what you’ve just read.	442, 447
WARNING	Warnings are provided in the text.	These point out common mistakes and help you to avoid them.	469
Exploration and Seeing the Concept	These graphing utility activities foreshadow a concept or solidify a concept just presented.	You will obtain a deeper and more intuitive understanding of theorems and definitions.	430, 455
In Words	These provide alternative descriptions of select definitions and theorems.	Does math ever look foreign to you? This feature translates math into plain English.	452
 Calculus	These appear next to information essential for the study of calculus.	Pay attention—if you spend extra time now, you’ll do better later!	210, 419, 442
SHOWCASE EXAMPLES	These examples provide “how-to” instruction by offering a guided, step-by-step approach to solving a problem.	With each step presented on the left and the mathematics displayed on the right, you can immediately see how each step is used.	381
 Model It! Examples and Problems	These examples and problems require you to build a mathematical model from either a verbal description or data. The homework Model It! problems are marked by purple headings.	It is rare for a problem to come in the form “ <i>Solve the following equation.</i> ” Rather, the equation must be developed based on an explanation of the problem. These problems require you to develop models to find a solution to the problem.	459, 488
NEW!  Need to Review?	These margin notes provide a just-in-time reminder of a concept needed now, but covered in an earlier section of the book. Each note is back-referenced to the chapter, section and page where the concept was originally discussed.	Sometimes as you read, you encounter a word or concept you know you’ve seen before, but don’t remember exactly what it means. This feature will point you to where you first learned the word or concept. A quick review now will help you see the connection to what you are learning for the first time and make remembering easier the next time.	428

Practice “Work the Problems”

Feature	Description	Benefit	Page
‘Are You Prepared?’ Problems	These assess your retention of the prerequisite material you’ll need. Answers are given at the end of the section exercises. This feature is related to the Preparing for This Section feature.	Do you always remember what you’ve learned? Working these problems is the best way to find out. If you get one wrong, you’ll know exactly what you need to review and where to review it!	452, 460
Concepts and Vocabulary	These short-answer questions, mainly Fill-in-the-Blank, Multiple-Choice and True/False items, assess your understanding of key definitions and concepts in the current section.	It is difficult to learn math without knowing the language of mathematics. These problems test your understanding of the formulas and vocabulary.	446
Skill Building	Correlated with section examples, these problems provide straightforward practice.	It’s important to dig in and develop your skills. These problems provide you with ample opportunity to do so.	446–448
Applications and Extensions	These problems allow you to apply your skills to real-world problems. They also allow you to extend concepts learned in the section.	You will see that the material learned within the section has many uses in everyday life.	449–451
NEW! Challenge Problems	These problems have been added in most sections and appear at the end of the Application and Extensions exercises. They are intended to be thought-provoking, requiring some ingenuity to solve.	Are you a student who likes being challenged? Then the Challenge Problems are for you! Your professor might also choose to assign a challenge problem as a group project. The ability to work with a team is a highly regarded skill in the working world.	451
Explaining Concepts: Discussion and Writing	“Discussion and Writing” problems are colored red. They support class discussion, verbalization of mathematical ideas, and writing and research projects.	To verbalize an idea, or to describe it clearly in writing, shows real understanding. These problems nurture that understanding. Many are challenging, but you’ll get out what you put in.	451
Retain Your Knowledge	These problems allow you to practice content learned earlier in the course.	Remembering how to solve all the different kinds of problems that you encounter throughout the course is difficult. This practice helps you remember.	451
Now Work PROBLEMS	Many examples refer you to a related homework problem. These related problems are marked by a pencil and orange numbers.	If you get stuck while working problems, look for the closest Now Work problem, and refer to the related example to see if it helps.	444, 447, 448
Review Exercises	Every chapter concludes with a comprehensive list of exercises to practice. Use the list of objectives to determine the objective and examples that correspond to the problems.	Work these problems to ensure that you understand all the skills and concepts of the chapter. Think of it as a comprehensive review of the chapter.	511–514

Review “Study for Quizzes and Tests”

Feature	Description	Benefit	Page
The Chapter Review at the end of each chapter contains . . .			
Things to Know	A detailed list of important theorems, formulas, and definitions from the chapter.	Review these and you’ll know the most important material in the chapter!	509–510
You Should Be Able to . . .	Contains a complete list of objectives by section, examples that illustrate the objective, and practice exercises that test your understanding of the objective.	Do the recommended exercises and you’ll have mastered the key material. If you get something wrong, go back and work through the objective listed and try again.	510–511
Review Exercises	These provide comprehensive review and practice of key skills, matched to the Learning Objectives for each section.	Practice makes perfect. These problems combine exercises from all sections, giving you a comprehensive review in one place.	511–514
Chapter Test	About 15–20 problems that can be taken as a Chapter Test. Be sure to take the Chapter Test under test conditions—no notes!	Be prepared. Take the sample practice test under test conditions. This will get you ready for your instructor’s test. If you get a problem wrong, you can watch the Chapter Test Prep Video.	514
Cumulative Review	These problem sets appear at the end of each chapter, beginning with Chapter 2. They combine problems from previous chapters, providing an ongoing cumulative review. When you use them in conjunction with the Retain Your Knowledge problems, you will be ready for the final exam.	These problem sets are really important. Completing them will ensure that you are not forgetting anything as you go. This will go a long way toward keeping you primed for the final exam.	515
Chapter Projects	The Chapter Projects apply to what you’ve learned in the chapter. Additional projects are available on the Instructor’s Resource Center (IRC).	The Chapter Projects give you an opportunity to use what you’ve learned in the chapter to the opening topic. If your instructor allows, these make excellent opportunities to work in a group, which is often the best way to learn math.	516
 Internet-Based Projects	In selected chapters, a Web-based project is given.	These projects give you an opportunity to collaborate and use mathematics to deal with issues of current interest by using the Internet to research and collect data.	516

For the family

Library of Congress Cataloging-in-Publication Data

Names: Sullivan, Michael, 1942- author.
Title: Algebra & Trigonometry / Michael Sullivan (Chicago State University).
Other titles: Algebra and Trigonometry
Description: Eleventh edition. | Boston : Pearson, [2020] | Includes index.
Identifiers: LCCN 2018048214 | ISBN 9780135163078
Subjects: LCSH: Algebra--Textbooks. | Algebra--Study and teaching (Higher) | Trigonometry--Textbooks. | Trigonometry--Study and teaching (Higher)
Classification: LCC QA154.3 .S73 2020 | DDC 512/.13--dc23 LC record available at <https://lcn.loc.gov/2018048214>

About the Cover:

The image on this book's cover was inspired by a talk given by Michael Sullivan III: *Is Mathematical Talent Overrated?*

The answer is yes. In mathematics, innate talent plays a much smaller role than grit and motivation as you work toward your goal. If you put in the time and hard work, you can succeed in your math course—just as an athlete must work to medal in their sport.

Contents

Three Distinct Series	xix
The Flagship Series	xx
Preface to the Instructor	xxi
Get the Most Out of MyLab Math	xxvi
Resources for Success	xxvii
Applications Index	xxix

R Review 1

R.1 Real Numbers	2
Work with Sets • Classify Numbers • Evaluate Numerical Expressions • Work with Properties of Real Numbers	
R.2 Algebra Essentials	17
Graph Inequalities • Find Distance on the Real Number Line • Evaluate Algebraic Expressions • Determine the Domain of a Variable • Use the Laws of Exponents • Evaluate Square Roots • Use a Calculator to Evaluate Exponents • Use Scientific Notation	
R.3 Geometry Essentials	30
Use the Pythagorean Theorem and Its Converse • Know Geometry Formulas • Understand Congruent Triangles and Similar Triangles	
R.4 Polynomials	39
Recognize Monomials • Recognize Polynomials • Add and Subtract Polynomials • Multiply Polynomials • Know Formulas for Special Products • Divide Polynomials Using Long Division • Work with Polynomials in Two Variables	
R.5 Factoring Polynomials	49
Factor the Difference of Two Squares and the Sum and Difference of Two Cubes • Factor Perfect Squares • Factor a Second-Degree Polynomial: $x^2 + Bx + C$ • Factor by Grouping • Factor a Second-Degree Polynomial: $Ax^2 + Bx + C, A \neq 1$ • Complete the Square	
R.6 Synthetic Division	57
Divide Polynomials Using Synthetic Division	
R.7 Rational Expressions	61
Reduce a Rational Expression to Lowest Terms • Multiply and Divide Rational Expressions • Add and Subtract Rational Expressions • Use the Least Common Multiple Method • Simplify Complex Rational Expressions	
R.8 nth Roots; Rational Exponents	72
Work with n th Roots • Simplify Radicals • Rationalize Denominators and Numerators • Simplify Expressions with Rational Exponents	

1 Equations and Inequalities 81

1.1 Linear Equations	82
Solve a Linear Equation • Solve Equations That Lead to Linear Equations • Solve Problems That Can Be Modeled by Linear Equations	
1.2 Quadratic Equations	92
Solve a Quadratic Equation by Factoring • Solve a Quadratic Equation Using the Square Root Method • Solve a Quadratic Equation by Completing the Square • Solve a Quadratic Equation Using the Quadratic Formula • Solve Problems That Can Be Modeled by Quadratic Equations	

1.3 Complex Numbers; Quadratic Equations in the Complex Number System	104
Add, Subtract, Multiply, and Divide Complex Numbers • Solve Quadratic Equations in the Complex Number System	
1.4 Radical Equations; Equations Quadratic in Form; Factorable Equations	113
Solve Radical Equations • Solve Equations Quadratic in Form • Solve Equations by Factoring	
1.5 Solving Inequalities	119
Use Interval Notation • Use Properties of Inequalities • Solve Inequalities • Solve Combined Inequalities	
1.6 Equations and Inequalities Involving Absolute Value	130
Solve Equations Involving Absolute Value • Solve Inequalities Involving Absolute Value	
1.7 Problem Solving: Interest, Mixture, Uniform Motion, Constant Rate Job Applications	134
Translate Verbal Descriptions into Mathematical Expressions • Solve Interest Problems • Solve Mixture Problems • Solve Uniform Motion Problems • Solve Constant Rate Job Problems	
Chapter Review	144
Chapter Test	147
Chapter Projects	147

2 Graphs 149

2.1 The Distance and Midpoint Formulas	150
Use the Distance Formula • Use the Midpoint Formula	
2.2 Graphs of Equations in Two Variables; Intercepts; Symmetry	158
Graph Equations by Plotting Points • Find Intercepts from a Graph • Find Intercepts from an Equation • Test an Equation for Symmetry with Respect to the x -Axis, the y -Axis, and the Origin • Know How to Graph Key Equations	
2.3 Lines	169
Calculate and Interpret the Slope of a Line • Graph Lines Given a Point and the Slope • Find the Equation of a Vertical Line • Use the Point-Slope Form of a Line; Identify Horizontal Lines • Use the Slope-Intercept Form of a Line • Find an Equation of a Line Given Two Points • Graph Lines Written in General Form Using Intercepts • Find Equations of Parallel Lines • Find Equations of Perpendicular Lines	
2.4 Circles	185
Write the Standard Form of the Equation of a Circle • Graph a Circle • Work with the General Form of the Equation of a Circle	
2.5 Variation	191
Construct a Model Using Direct Variation • Construct a Model Using Inverse Variation • Construct a Model Using Joint Variation	
Chapter Review	197
Chapter Test	200
Cumulative Review	200
Chapter Project	201

3	Functions and Their Graphs	202
	3.1 Functions	203
	Describe a Relation • Determine Whether a Relation Represents a Function • Use Function Notation; Find the Value of a Function • Find the Difference Quotient of a Function • Find the Domain of a Function Defined by an Equation • Form the Sum, Difference, Product, and Quotient of Two Functions	
	3.2 The Graph of a Function	219
	Identify the Graph of a Function • Obtain Information from or about the Graph of a Function	
	3.3 Properties of Functions	229
	Identify Even and Odd Functions from a Graph • Identify Even and Odd Functions from an Equation • Use a Graph to Determine Where a Function Is Increasing, Decreasing, or Constant • Use a Graph to Locate Local Maxima and Local Minima • Use a Graph to Locate the Absolute Maximum and the Absolute Minimum • Use a Graphing Utility to Approximate Local Maxima and Local Minima and to Determine Where a Function Is Increasing or Decreasing • Find the Average Rate of Change of a Function	
	3.4 Library of Functions; Piecewise-defined Functions	242
	Graph the Functions Listed in the Library of Functions • Analyze a Piecewise-defined Function	
	3.5 Graphing Techniques: Transformations	254
	Graph Functions Using Vertical and Horizontal Shifts • Graph Functions Using Compressions and Stretches • Graph Functions Using Reflections about the x -Axis and the y -Axis	
	3.6 Mathematical Models: Building Functions	267
	Build and Analyze Functions	
	Chapter Review	273
	Chapter Test	277
	Cumulative Review	278
	Chapter Projects	278
4	Linear and Quadratic Functions	280
	4.1 Properties of Linear Functions and Linear Models	281
	Graph Linear Functions • Use Average Rate of Change to Identify Linear Functions • Determine Whether a Linear Function Is Increasing, Decreasing, or Constant • Build Linear Models from Verbal Descriptions	
	4.2 Building Linear Models from Data	291
	Draw and Interpret Scatter Plots • Distinguish between Linear and Nonlinear Relations • Use a Graphing Utility to Find the Line of Best Fit	
	4.3 Quadratic Functions and Their Properties	299
	Graph a Quadratic Function Using Transformations • Identify the Vertex and Axis of Symmetry of a Parabola • Graph a Quadratic Function Using Its Vertex, Axis, and Intercepts • Find a Quadratic Function Given Its Vertex and One Other Point • Find the Maximum or Minimum Value of a Quadratic Function	
	4.4 Building Quadratic Models from Verbal Descriptions and from Data	312
	Build Quadratic Models from Verbal Descriptions • Build Quadratic Models from Data	

4.5	Inequalities Involving Quadratic Functions	321
	Solve Inequalities Involving a Quadratic Function	
	Chapter Review	325
	Chapter Test	327
	Cumulative Review	328
	Chapter Projects	329
5	Polynomial and Rational Functions	330
5.1	Polynomial Functions	331
	Identify Polynomial Functions and Their Degree • Graph Polynomial Functions Using Transformations • Identify the Real Zeros of a Polynomial Function and Their Multiplicity	
5.2	Graphing Polynomial Functions; Models	346
	Graph a Polynomial Function • Graph a Polynomial Function Using a Graphing Utility • Build Cubic Models from Data	
5.3	Properties of Rational Functions	354
	Find the Domain of a Rational Function • Find the Vertical Asymptotes of a Rational Function • Find a Horizontal or an Oblique Asymptote of a Rational Function	
5.4	The Graph of a Rational Function	365
	Graph a Rational Function • Solve Applied Problems Involving Rational Functions	
5.5	Polynomial and Rational Inequalities	380
	Solve Polynomial Inequalities • Solve Rational Inequalities	
5.6	The Real Zeros of a Polynomial Function	387
	Use the Remainder and Factor Theorems • Use Descartes' Rule of Signs to Determine the Number of Positive and the Number of Negative Real Zeros of a Polynomial Function • Use the Rational Zeros Theorem to List the Potential Rational Zeros of a Polynomial Function • Find the Real Zeros of a Polynomial Function • Solve Polynomial Equations • Use the Theorem for Bounds on Zeros • Use the Intermediate Value of Theorem	
5.7	Complex Zeros; Fundamental Theorem of Algebra	401
	Use the Conjugate Pairs Theorem • Find a Polynomial Function with Specified Zeros • Find the Complex Zeros of a Polynomial Function	
	Chapter Review	408
	Chapter Test	411
	Cumulative Review	412
	Chapter Projects	413
6	Exponential and Logarithmic Functions	414
6.1	Composite Functions	415
	Form a Composite Function • Find the Domain of a Composite Function	
6.2	One-to-One Functions; Inverse Functions	423
	Determine Whether a Function Is One-to-One • Obtain the Graph of the Inverse Function from the Graph of a One-to-One Function • Verify an Inverse Function • Find the Inverse of a Function Defined by an Equation	
6.3	Exponential Functions	435
	Evaluate Exponential Functions • Graph Exponential Functions • Define the Number e • Solve Exponential Equations	

6.4	Logarithmic Functions	452
	Change Exponential Statements to Logarithmic Statements and Logarithmic Statements to Exponential Statements • Evaluate Logarithmic Expressions • Determine the Domain of a Logarithmic Function • Graph Logarithmic Functions • Solve Logarithmic Equations	
6.5	Properties of Logarithms	465
	Work with the Properties of Logarithms • Write a Logarithmic Expression as a Sum or Difference of Logarithms • Write a Logarithmic Expression as a Single Logarithm • Evaluate Logarithms Whose Base Is Neither 10 Nor e	
6.6	Logarithmic and Exponential Equations	474
	Solve Logarithmic Equations • Solve Exponential Equations • Solve Logarithmic and Exponential Equations Using a Graphing Utility	
6.7	Financial Models	481
	Determine the Future Value of a Lump Sum of Money • Calculate Effective Rates of Return • Determine the Present Value of a Lump Sum of Money • Determine the Rate of Interest or the Time Required to Double a Lump Sum of Money	
6.8	Exponential Growth and Decay Models; Newton's Law; Logistic Growth and Decay Models	491
	Model Populations That Obey the Law of Uninhibited Growth • Model Populations That Obey the Law of Uninhibited Decay • Use Newton's Law of Cooling • Use Logistic Models	
6.9	Building Exponential, Logarithmic, and Logistic Models from Data	502
	Build an Exponential Model from Data • Build a Logarithmic Model from Data • Build a Logistic Model from Data	
	Chapter Review	509
	Chapter Test	514
	Cumulative Review	515
	Chapter Projects	516

7 **Trigonometric Functions** **517**

7.1	Angles, Arc Length, and Circular Motion	518
	Angles and Degree Measure • Convert between Decimal and Degree, Minute, Second Measures for Angles • Find the Length of an Arc of a Circle • Convert from Degrees to Radians and from Radians to Degrees • Find the Area of a Sector of a Circle • Find the Linear Speed of an Object Traveling in Circular Motion	
7.2	Right Triangle Trigonometry	531
	Find the Values of Trigonometric Functions of Acute Angles • Use Fundamental Identities • Find the Values of the Remaining Trigonometric Functions, Given the Value of One of Them • Use the Complementary Angle Theorem	
7.3	Computing the Values of Trigonometric Functions of Acute Angles	543
	Find the Exact Values of the Trigonometric Functions of $\frac{\pi}{4} = 45^\circ$ • Find the Exact Values of the Trigonometric Functions of $\frac{\pi}{6} = 30^\circ$ and $\frac{\pi}{3} = 60^\circ$ • Use a Calculator to Approximate the Values of the Trigonometric Functions of Acute Angles • Model and Solve Applied Problems Involving Right Triangles	

7.4 Trigonometric Functions of Any Angle	555
Find the Exact Values of the Trigonometric Functions for Any Angle • Use Coterminal Angles to Find the Exact Value of a Trigonometric Function • Determine the Signs of the Trigonometric Functions of an Angle in a Given Quadrant • Find the Reference Angle of an Angle • Use a Reference Angle to Find the Exact Value of a Trigonometric Function • Find the Exact Values of the Trigonometric Functions of an Angle, Given Information about the Functions	
7.5 Unit Circle Approach; Properties of the Trigonometric Functions	566
Find the Exact Values of the Trigonometric Functions Using the Unit Circle • Know the Domain and Range of the Trigonometric Functions • Use Periodic Properties to Find the Exact Values of the Trigonometric Functions • Use Even-Odd Properties to Find the Exact Values of the Trigonometric Functions	
7.6 Graphs of the Sine and Cosine Functions	579
Graph the Sine Function $y = \sin x$ and Functions of the Form $y = A \sin(\omega x)$ • Graph the Cosine Function $y = \cos x$ and Functions of the Form $y = A \cos(\omega x)$ • Determine the Amplitude and Period of Sinusoidal Functions • Graph Sinusoidal Functions Using Key Points • Find an Equation for a Sinusoidal Graph	
7.7 Graphs of the Tangent, Cotangent, Cosecant, and Secant Functions	594
Graph the Tangent Function $y = \tan x$ and the Cotangent Function $y = \cot x$ • Graph Functions of the Form $y = A \tan(\omega x) + B$ and $y = A \cot(\omega x) + B$ • Graph the Cosecant Function $y = \csc x$ and the Secant Function $y = \sec x$ • Graph Functions of the Form $y = A \csc(\omega x) + B$ and $y = A \sec(\omega x) + B$	
7.8 Phase Shift; Sinusoidal Curve Fitting	601
Graph Sinusoidal Functions of the Form $y = A \sin(\omega x - \phi) + B$ • Build Sinusoidal Models from Data	
Chapter Review	613
Chapter Test	618
Cumulative Review	619
Chapter Projects	620

8 Analytic Trigonometry **621**

8.1 The Inverse Sine, Cosine, and Tangent Functions	622
Define the Inverse Sine Function • Find the Value of an Inverse Sine Function • Define the Inverse Cosine Function • Find the Value of an Inverse Cosine Function • Define the Inverse Tangent Function • Find the Value of an Inverse Tangent Function • Use Properties of Inverse Functions to Find Exact Values of Certain Composite Functions • Find the Inverse Function of a Trigonometric Function • Solve Equations involving Inverse Trigonometric Functions	
8.2 The Inverse Trigonometric Functions (Continued)	635
Define the Inverse Secant, Cosecant, and Cotangent Functions • Find the Value of Inverse Secant, Cosecant, and Cotangent Functions • Find the Exact Value of Composite Functions Involving the Inverse Trigonometric Functions • Write a Trigonometric Expression as an Algebraic Expression	
8.3 Trigonometric Equations	641
Solve Equations Involving a Single Trigonometric Function • Solve Trigonometric Equations Using a Calculator • Solve Trigonometric Equations Quadratic in Form • Solve Trigonometric Equations Using Fundamental Identities • Solve Trigonometric Equations Using a Graphing Utility	

8.4	Trigonometric Identities	651
	Use Algebra to Simplify Trigonometric Expressions • Establish Identities	
8.5	Sum and Difference Formulas	659
	Use Sum and Difference Formulas to Find Exact Values • Use Sum and Difference Formulas to Establish Identities • Use Sum and Difference Formulas Involving Inverse Trigonometric Functions • Solve Trigonometric Equations Linear in Sine and Cosine	
8.6	Double-angle and Half-angle Formulas	672
	Use Double-angle Formulas to Find Exact Values • Use Double-angle Formulas to Establish Identities • Use Half-angle Formulas to Find Exact Values	
8.7	Product-to-Sum and Sum-to-Product Formulas	683
	Express Products as Sums • Express Sums as Products	
	Chapter Review	687
	Chapter Test	690
	Cumulative Review	691
	Chapter Projects	692
9	Applications of Trigonometric Functions	693
9.1	Applications Involving Right Triangles	694
	Solve Right Triangles • Solve Applied Problems	
9.2	The Law of Sines	700
	Solve SAA or ASA Triangles • Solve SSA Triangles • Solve Applied Problems	
9.3	The Law of Cosines	711
	Solve SAS Triangles • Solve SSS Triangles • Solve Applied Problems	
9.4	Area of a Triangle	718
	Find the Area of SAS Triangles • Find the Area of SSS Triangles	
9.5	Simple Harmonic Motion; Damped Motion; Combining Waves	724
	Build a Model for an Object in Simple Harmonic Motion • Analyze Simple Harmonic Motion • Analyze an Object in Damped Motion • Graph the Sum of Two Functions	
	Chapter Review	734
	Chapter Test	736
	Cumulative Review	737
	Chapter Projects	737
10	Polar Coordinates; Vectors	739
10.1	Polar Coordinates	740
	Plot Points Using Polar Coordinates • Convert from Polar Coordinates to Rectangular Coordinates • Convert from Rectangular Coordinates to Polar Coordinates • Transform Equations between Polar and Rectangular Forms	
10.2	Polar Equations and Graphs	749
	Identify and Graph Polar Equations by Converting to Rectangular Equations • Test Polar Equations for Symmetry • Graph Polar Equations by Plotting Points	
10.3	The Complex Plane; De Moivre's Theorem	764
	Plot Points in the Complex Plane • Convert a Complex Number between Rectangular Form and Polar Form or Exponential Form • Find Products and Quotients of Complex Numbers • Use De Moivre's Theorem • Find Complex Roots	

10.4 Vectors	773
Graph Vectors • Find a Position Vector • Add and Subtract Vectors Algebraically • Find a Scalar Multiple and the Magnitude of a Vector • Find a Unit Vector • Find a Vector from Its Direction and Magnitude • Model with Vectors	
10.5 The Dot Product	788
Find the Dot Product of Two Vectors • Find the Angle between Two Vectors • Determine Whether Two Vectors Are Parallel • Determine Whether Two Vectors Are Orthogonal • Decompose a Vector into Two Orthogonal Vectors • Compute Work	
Chapter Review	795
Chapter Test	798
Cumulative Review	799
Chapter Projects	799
11 Analytic Geometry	800
11.1 Conics	801
Know the Names of the Conics	
11.2 The Parabola	802
Analyze Parabolas with Vertex at the Origin • Analyze Parabolas with Vertex at (h, k) • Solve Applied Problems Involving Parabolas	
11.3 The Ellipse	811
Analyze Ellipses with Center at the Origin • Analyze Ellipses with Center at (h, k) • Solve Applied Problems Involving Ellipses	
11.4 The Hyperbola	821
Analyze Hyperbolas with Center at the Origin • Find the Asymptotes of a Hyperbola • Analyze Hyperbolas with Center at (h, k) • Solve Applied Problems Involving Hyperbolas	
11.5 Rotation of Axes; General Form of a Conic	834
Identify a Conic • Use a Rotation of Axes to Transform Equations • Analyze an Equation Using a Rotation of Axes • Identify Conics without Rotating the Axes	
11.6 Polar Equations of Conics	842
Analyze and Graph Polar Equations of Conics • Convert the Polar Equation of a Conic to a Rectangular Equation	
11.7 Plane Curves and Parametric Equations	849
Graph Parametric Equations • Find a Rectangular Equation for a Plane Curve Defined Parametrically • Use Time as a Parameter in Parametric Equations • Find Parametric Equations for Plane Curves Defined by Rectangular Equations	
Chapter Review	862
Chapter Test	864
Cumulative Review	865
Chapter Projects	865
12 Systems of Equations and Inequalities	867
12.1 Systems of Linear Equations: Substitution and Elimination	868
Solve Systems of Equations by Substitution • Solve Systems of Equations by Elimination • Identify Inconsistent Systems of Equations Containing Two Variables • Express the Solution of a System of Dependent Equations	

Containing Two Variables • Solve Systems of Three Equations Containing Three Variables • Identify Inconsistent Systems of Equations Containing Three Variables • Express the Solution of a System of Dependent Equations Containing Three Variables

12.2 Systems of Linear Equations: Matrices	882
Write the Augmented Matrix of a System of Linear Equations • Write the System of Equations from the Augmented Matrix • Perform Row Operations on a Matrix • Solve a System of Linear Equations Using Matrices	
12.3 Systems of Linear Equations: Determinants	896
Evaluate 2 by 2 Determinants • Use Cramer's Rule to Solve a System of Two Equations Containing Two Variables • Evaluate 3 by 3 Determinants • Use Cramer's Rule to Solve a System of Three Equations Containing Three Variables • Know Properties of Determinants	
12.4 Matrix Algebra	907
Find the Sum and Difference of Two Matrices • Find Scalar Multiples of a Matrix • Find the Product of Two Matrices • Find the Inverse of a Matrix • Solve a System of Linear Equations Using an Inverse Matrix	
12.5 Partial Fraction Decomposition	924
Decompose $\frac{P}{Q}$ Where Q Has Only Nonrepeated Linear Factors	
• Decompose $\frac{P}{Q}$ Where Q Has Repeated Linear Factors • Decompose $\frac{P}{Q}$ Where Q Has a Nonrepeated Irreducible Quadratic Factor • Decompose $\frac{P}{Q}$ Where Q Has a Repeated Irreducible Quadratic Factor	
12.6 Systems of Nonlinear Equations	933
Solve a System of Nonlinear Equations Using Substitution • Solve a System of Nonlinear Equations Using Elimination	
12.7 Systems of Inequalities	942
Graph an Inequality • Graph a System of Inequalities	
12.8 Linear Programming	949
Set Up a Linear Programming Problem • Solve a Linear Programming Problem	
Chapter Review	957
Chapter Test	960
Cumulative Review	961
Chapter Projects	962

13 Sequences; Induction; the Binomial Theorem 963

13.1 Sequences	964
List the First Several Terms of a Sequence • List the Terms of a Sequence Defined by a Recursive Formula • Use Summation Notation • Find the Sum of a Sequence	
13.2 Arithmetic Sequences	974
Determine Whether a Sequence Is Arithmetic • Find a Formula for an Arithmetic Sequence • Find the Sum of an Arithmetic Sequence	
13.3 Geometric Sequences; Geometric Series	981
Determine Whether a Sequence Is Geometric • Find a Formula for a Geometric Sequence • Find the Sum of a Geometric Sequence	
• Determine Whether a Geometric Series Converges or Diverges	
• Solve Annuity Problems	

13.4 Mathematical Induction	993
Prove Statements Using Mathematical Induction	
13.5 The Binomial Theorem	997
Evaluate $\binom{n}{j}$ • Use the Binomial Theorem	
Chapter Review	1003
Chapter Test	1006
Cumulative Review	1006
Chapter Projects	1007

14 Counting and Probability 1008

14.1 Counting	1009
Find All the Subsets of a Set • Count the Number of Elements in a Set • Solve Counting Problems Using the Multiplication Principle	
14.2 Permutations and Combinations	1014
Solve Counting Problems Using Permutations Involving n Distinct Objects • Solve Counting Problems Using Combinations • Solve Counting Problems Using Permutations Involving n Nondistinct Objects	
14.3 Probability	1023
Construct Probability Models • Compute Probabilities of Equally Likely Outcomes • Find Probabilities of the Union of Two Events • Use the Complement Rule to Find Probabilities	
Chapter Review	1033
Chapter Test	1035
Cumulative Review	1036
Chapter Projects	1036

Three Distinct Series

Students have different goals, learning styles, and levels of preparation. Instructors have different teaching philosophies, styles, and techniques. Rather than write one series to fit all, the Sullivans have written three distinct series. All share the same goal—to develop a high level of mathematical understanding and an appreciation for the way mathematics can describe the world around us. The manner of reaching that goal, however, differs from series to series.

Flagship Series, Eleventh Edition

The Flagship Series is the most traditional in approach yet modern in its treatment of precalculus mathematics. In each text, needed review material is included, and is referenced when it is used. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor: *College Algebra*, *Algebra & Trigonometry*, *Trigonometry: A Unit Circle Approach*, *Precalculus*.

Enhanced with Graphing Utilities Series, Seventh Edition

This series provides a thorough integration of graphing utilities into topics, allowing students to explore mathematical concepts and encounter ideas usually studied in later courses. Many examples show solutions using algebra side-by-side with graphing techniques. Using technology, the approach to solving certain problems differs from the Flagship Series, while the emphasis on understanding concepts and building strong skills is maintained: *College Algebra*, *Algebra & Trigonometry*, *Precalculus*.

Concepts through Functions Series, Fourth Edition

This series differs from the others, utilizing a functions approach that serves as the organizing principle tying concepts together. Functions are introduced early in various formats. The approach supports the Rule of Four, which states that functions can be represented symbolically, numerically, graphically, and verbally. Each chapter introduces a new type of function and then develops all concepts pertaining to that particular function. The solutions of equations and inequalities, instead of being developed as stand-alone topics, are developed in the context of the underlying functions. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor: *College Algebra*; *Precalculus, with a Unit Circle Approach to Trigonometry*; *Precalculus, with a Right Triangle Approach to Trigonometry*.

The Flagship Series

College Algebra, Eleventh Edition

This text provides a contemporary approach to college algebra, with three chapters of review material preceding the chapters on functions. Graphing calculator usage is provided, but is optional. After completing this book, a student will be adequately prepared for trigonometry, finite mathematics, and business calculus.

Algebra & Trigonometry, Eleventh Edition

This text contains all the material in *College Algebra*, but also develops the trigonometric functions using a right triangle approach and shows how it relates to the unit circle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Vectors in the plane, sequences, induction, and the binomial theorem are also presented. Graphing calculator usage is provided, but is optional. After completing this book, a student will be adequately prepared for finite mathematics, business calculus, and engineering calculus.

Precalculus, Eleventh Edition

This text contains one review chapter before covering the traditional precalculus topics of polynomial, rational, exponential, and logarithmic functions and their graphs. The trigonometric functions are introduced using a unit circle approach and showing how it relates to the right triangle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Vectors in the plane and in space, including the dot and cross products, sequences, induction, and the binomial theorem are also presented. Graphing calculator usage is provided, but is optional. The final chapter provides an introduction to calculus, with a discussion of the limit, the derivative, and the integral of a function. After completing this book, a student will be adequately prepared for finite mathematics, business calculus, and engineering calculus.

Trigonometry: a Unit Circle Approach, Eleventh Edition

This text, designed for stand-alone courses in trigonometry, develops the trigonometric functions using a unit circle approach and shows how it relates to the right triangle approach. Vectors in the plane and in space, including the dot and cross products, are presented. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Graphing calculator usage is provided, but is optional. After completing this book, a student will be adequately prepared for finite mathematics, business calculus, and engineering calculus.

Preface to the Instructor

As a professor of mathematics at an urban public university for 35 years, I understand the varied needs of algebra and trigonometry students. Students range from being underprepared with little mathematical background and a fear of mathematics, to being highly prepared and motivated. For some, this is their final course in mathematics. For others, it is preparation for future mathematics courses. I have written this text with both groups in mind.

A tremendous benefit of authoring a successful series is the broad-based feedback I receive from instructors and students who have used previous editions. I am sincerely grateful for their support. Virtually every change to this edition is the result of their thoughtful comments and suggestions. I hope that I have been able to take their ideas and, building upon a successful foundation of the tenth edition, make this series an even better learning and teaching tool for students and instructors.

Features in the Eleventh Edition

A descriptive list of the many special features of *Algebra & Trigonometry* can be found on the endpapers in the front of this text. This list places the features in their proper context, as building blocks of an overall learning system that has been carefully crafted over the years to help students get the most out of the time they put into studying. Please take the time to review it and to discuss it with your students at the beginning of your course. My experience has been that when students use these features, they are more successful in the course.

- **Updated! Retain Your Knowledge Problems** These problems, which were new to the previous edition, are based on the article “*To Retain New Learning, Do the Math,*” published in the *Edurati Review*. In this article, Kevin Washburn suggests that “the more students are required to recall new content or skills, the better their memory will be.” The Retain Your Knowledge problems were so well received that they have been expanded in this edition. Moreover, while the focus remains to help students maintain their skills, in most sections, problems were chosen that preview skills required to succeed in subsequent sections or in calculus. These are easily identified by the calculus icon (\int). All answers to Retain Your Knowledge problems are given in the back of the text and all are assignable in MyLab Math.
- **Guided Lecture Notes** Ideal for online, emporium/redesign courses, inverted classrooms, or traditional lecture classrooms. These lecture notes help students take thorough, organized, and understandable notes as they watch the Author in Action videos. They ask students to complete definitions, procedures, and examples based on the content of the videos and text. In addition, experience suggests that students learn by doing and understanding the why/how of the concept or property. Therefore, many

sections will have an exploration activity to motivate student learning. These explorations introduce the topic and/or connect it to either a real-world application or a previous section. For example, when the vertical-line test is discussed in Section 3.2, after the theorem statement, the notes ask the students to explain why the vertical-line test works by using the definition of a function. This challenge helps students process the information at a higher level of understanding.

- **Illustrations** Many of the figures have captions to help connect the illustrations to the explanations in the body of the text.
- **Graphing Utility Screen Captures** In several instances we have added Desmos screen captures along with the TI-84 Plus C screen captures. These updated screen captures provide alternate ways of visualizing concepts and making connections between equations, data and graphs in full color.
- **Chapter Projects**, which apply the concepts of each chapter to a real-world situation, have been enhanced to give students an up-to-the-minute experience. Many of these projects are new requiring the student to research information online in order to solve problems.
- **Exercise Sets** The exercises in the text have been reviewed and analyzed some have been removed, and new ones have been added. All time-sensitive problems have been updated to the most recent information available. The problem sets remain classified according to purpose.

The “*Are You Prepared?*” problems have been improved to better serve their purpose as a just-in-time review of concepts that the student will need to apply in the upcoming section.

The **Concepts and Vocabulary** problems have been expanded to cover each objective of the section. These multiple-choice, fill-in-the-blank, and True/False exercises have been written to also serve as reading quizzes.

Skill Building problems develop the student’s computational skills with a large selection of exercises that are directly related to the objectives of the section. **Mixed Practice** problems offer a comprehensive assessment of skills that relate to more than one objective. Often these require skills learned earlier in the course.

Applications and Extensions problems have been updated. Further, many new application-type exercises have been added, especially ones involving information and data drawn from sources the student will recognize, to improve relevance and timeliness.

At the end of Applications and Extensions, we have a collection of one or more **Challenge Problems**. These problems, as the title suggests, are intended to be thought-provoking, requiring some ingenuity to solve. They can be used for group work or to challenge students. At the end of the Annotated Instructor’s

Edition and in the online Instructor's Solutions Manual, we have provided solutions to all these problems.

The *Explaining Concepts: Discussion and Writing* exercises provide opportunity for classroom discussion and group projects.

Updated! Retain Your Knowledge has been improved and expanded. The problems are based on material learned earlier in the course. They serve to keep information that has already been learned “fresh” in the mind of the student. Answers to all these problems appear in the Student Edition.

Need to Review? These margin notes provide a just-in-time reminder of a concept needed now, but covered in an earlier section of the book. Each note includes a reference to the chapter, section and page where the concept was originally discussed.

Content Changes to the 11th edition

- **Challenge Problems** have been added in most sections at the end of the Application and Extensions exercises. Challenge Problems are intended to be thought-provoking problems that require some ingenuity to solve. They can be used to challenge students or for group work. Solutions to Challenge Problems are at available in the Annotated Instructor's Edition and the online Instructors Solutions Manual.
- **Need to Review?** These margin notes provide a just-in-time review for a concept needed now, but covered in an earlier section of the book. Each note is back-referenced to the chapter, section and page where the concept was originally discussed.
- Additional **Retain Your Knowledge** exercises, whose purpose is to keep learned material fresh in a student's mind, have been added to each section. Many of these new problems preview skills required for calculus or for concepts needed in subsequent sections.
- **Desmos** screen captures have been added throughout the text. This is done to recognize that graphing technology expands beyond graphing calculators.
- Examples and exercises throughout the text have been augmented to reflect a broader selection of STEM applications.
- Concepts and Vocabulary exercises have been expanded to cover each objective of a section.
- Skill building exercises have been expanded to assess a wider range of difficulty.
- Applied problems and those based on real data have been updated where appropriate.

Chapter R

- Section R.8 Objective 3 now includes rationalizing the numerator
 - NEW Example 6 Rationalizing Numerators
 - Problems 69-76 provide practice.
- Section R.8 Exercises now include more practice in simplifying radicals

Chapter 1

- NEW Section 1.2 Objective 2 Solve a Quadratic Equation Using the Square Root Method.

Chapter 2

- NEW Section 2.2 Example 9 Testing an Equation for Symmetry
- Section 2.3 has been reorganized to treat the slope-intercept form of the equation of a line before finding an equation of a line using two points.

Chapter 3

- NEW Section 3.1 Objective 1 Describe a Relation
- NEW Section 3.2 Example 4 Expending Energy
- NEW Section 3.4 Example 4 Analyzing a Piecewise-defined Function
- NEW Example 1 Describing a Relation demonstrates using the Rule of Four to express a relation numerically, as a mapping, and graphically given a verbal description.

Chapter 4

- Section 4.3 introduces the concept of concavity for a quadratic function
- NEW Section 4.3 Example 3 Graphing a Quadratic Function Using Its Vertex, Axis, and Intercepts
- Section 4.3 Example 8 Analyzing the Motion of a Projectile (formerly in Section 4.4)
- NEW Section 4.4 Example 4 Fitting a Quadratic Function to Data

Chapter 5

- Section 5.1 has been revised and split into two sections:
 - 5.1 Polynomial Functions
 - 5.2 Graphing Polynomial Functions; Models
- NEW Section 5.2 Example 2 Graphing a Polynomial Function (a 4th degree polynomial function)

Chapter 6

- Section 6.2 now finds and verifies inverse functions analytically and graphically

Chapter 7

- NEW Section 7.1 Example 6 Field Width of a Digital Lens Reflex Camera Lens
- NEW Section 7.5 Example 5 Using Symmetry to Find Exact Values of Trigonometric Functions
- Section 7.6 and 7.7 were reorganized for increased clarity.

Chapter 8

- Sections 8.1 and 8.2 were reorganized for increased clarity.

Chapter 10

- Section 10.3 The complex plane; DeMoivre's Theorem, was rewritten to support the exponential form of a complex number.
 - Euler's Formula is introduced to express a complex number in exponential form

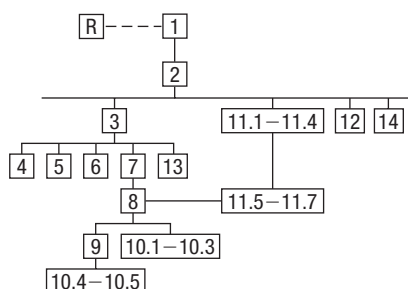

- The exponential form of a complex number is used to compute products and quotients.
- DeMoivre's Theorem is expressed using the exponential form of a complex number.
- The exponential form is used to find complex roots

Chapter 12

- NEW Section 12.5 Example 1 Identifying Proper and Improper Rational Expressions

Using the Eleventh Edition Effectively with Your Syllabus

To meet the varied needs of diverse syllabi, this text contains more content than is likely to be covered in an *Algebra & Trigonometry* course. As the chart illustrates, this text has been organized with flexibility of use in mind. Within a given chapter, certain sections are optional (see the details that follow the figure below) and can be omitted without loss of continuity.

Chapter R Review

This chapter consists of review material. It may be used as the first part of the course or later as a just-in-time review when the content is required. Specific references to this chapter occur throughout the text to assist in the review process.

Chapter 1 Equations and Inequalities

Primarily a review of Intermediate Algebra topics, this material is a prerequisite for later topics. The coverage of complex numbers and quadratic equations with a negative discriminant is optional and may be postponed or skipped entirely without loss of continuity.

Acknowledgments

Textbooks are written by authors, but evolve from an idea to final form through the efforts of many people. It was Don Dellen who first suggested this text and series to me. Don is remembered for his extensive contributions to publishing and mathematics.

Thanks are due to the following people for their assistance and encouragement to the preparation of this edition:

- From Pearson Education: Anne Kelly for her substantial contributions, ideas, and enthusiasm; Dawn Murrin,

Chapter 2 Graphs

This chapter lays the foundation for functions. Section 2.5 is optional.

Chapter 3 Functions and Their Graphs

Perhaps the most important chapter. Section 3.6 is optional.

Chapter 4 Linear and Quadratic Functions

Topic selection depends on your syllabus. Sections 4.2 and 4.4 may be omitted without loss of continuity.

Chapter 5 Polynomial and Rational Functions

Topic selection depends on your syllabus.

Chapter 6 Exponential and Logarithmic Functions

Sections 6.1–6.6 follow in sequence. Sections 6.7, 6.8, and 6.9 are optional.

Chapter 7 Trigonometric Functions

Section 7.8 may be omitted in a brief course.

Chapter 8 Analytic Trigonometry

Sections 8.2, 8.6, and 8.8 may be omitted in a brief course.

Chapter 9 Applications of Trigonometric Functions

Sections 9.4 and 9.5 may be omitted in a brief course.

Chapter 10 Polar Coordinates; Vectors

Sections 10.1–10.3 and Sections 10.4–10.5 are independent and may be covered separately.

Chapter 11 Analytic Geometry

Sections 11.1–11.4 follow in sequence. Sections 11.5, 11.6, and 11.7 are independent of each other, but each requires Sections 11.1–11.4.

Chapter 12 Systems of Equations and Inequalities

Sections 12.2–12.7 may be covered in any order, but each requires Section 12.1. Section 12.8 requires Section 12.7.

Chapter 13 Sequences; Induction; The Binomial Theorem

There are three independent parts: Sections 13.1–13.3; Section 13.4; and Section 13.5.

Chapter 14 Counting and Probability

The sections follow in sequence.

for her unmatched talent at getting the details right; Joseph Colella for always getting the reviews and pages to me on time; Peggy McMahon for directing the always difficult production process; Rose Kernan for handling liaison between the compositor and author; Peggy Lucas and Stacey Sveum for their genuine interest in marketing this text. Marcia Horton for her continued support and genuine interest; Paul Corey for his leadership and commitment to excellence; and the Pearson Sales team, for their continued confidence and personal support of Sullivan texts.

- Accuracy checkers: C. Brad Davis who read the entire manuscript and accuracy checked answers. His attention to detail is amazing; Timothy Britt, for creating the Solutions Manuals; and Kathleen Miranda and Pamela Trim for accuracy checking answers.

Finally, I offer my grateful thanks to the dedicated users and reviewers of my texts, whose collective insights form the backbone of each textbook revision.

Michael Sullivan

Get the Most Out of MyLab Math

Math courses are continuously evolving to help today’s students succeed. It’s more challenging than ever to support students with a wide range of backgrounds, learner styles, and math anxieties. The flexibility to build a course that fits instructors’ individual course formats—with a variety of content options and multimedia resources all in one place—has made MyLab Math the market-leading solution for teaching and learning mathematics since its inception.

Preparedness

One of the biggest challenges in College Algebra, Trigonometry, and Precalculus is making sure students are adequately prepared with prerequisite knowledge. For a student, having the essential algebra skills upfront in this course can dramatically increase success.

- **MyLab Math with Integrated Review** can be used in corequisite courses, or simply to help students who enter without a full understanding of prerequisite skills and concepts. **Integrated Review** provides videos on review topics with a corresponding worksheet, along with premade, assignable skills-check quizzes and personalized review homework assignments. **Integrated Review** is now available within all Sullivan 11th Edition MyLab Math courses.

Assignments	
10/18/19 11:59pm	◆ Chapter 4 Skills Check
10/18/19 11:59pm	▶ ● Chapter 4 Skills Review Homework
04/01/20 11:59pm	◆ Chapter 5 Skills Check
04/01/20 11:59pm	▶ ● Chapter 5 Skills Review Homework
09/14/20 11:59pm	◆ Chapter 6 Skills Check
09/14/20 11:59pm	▶ ● Chapter 6 Skills Review Homework

Resources for Success

Instructor Resources

Online resources can be downloaded from www.pearson.com, or hardcopy resources can be ordered from your sales representative.

Annotated Instructor's Edition

Algebra & Trigonometry, 11th Edition

ISBN – 0135190541 / 9780135190548

Shorter answers are on the page beside the exercises. Longer answers are in the back of the text.

Instructor's Solutions Manual

ISBN – 0135189322 / 9780135189320

Includes fully worked solutions to all exercises in the text.

Learning Catalytics Question Library

Questions written by Michael Sullivan III are available within MyLab Math to deliver through Learning Catalytics to engage students in your course.

Powerpoint® Lecture Slides

Fully editable slides correlate to the textbook.

Mini Lecture Notes

Includes additional examples and helpful teaching tips, by section.

Testgen®

TestGen (www.pearsoned.com/testgen) enables instructors to build, edit, print, and administer tests using a computerized bank of questions developed to cover all the objectives of the text.

Online Chapter Projects

Additional projects that give students an opportunity to apply what they learned in the chapter.

Student Resources

Additional resources to enhance student success.

Lecture Video

Author in Action videos are actual classroom lectures with fully worked out examples presented by Michael Sullivan, III. All video is assignable within MyLab Math.

Chapter Test Prep Videos

Students can watch instructors work through step-by-step solutions to all chapter test exercises from the text. These are available in MyLab Math and on YouTube.

Student's Solutions Manual

ISBN - 013518925X / 9780135189252

Provides detailed worked-out solutions to odd-numbered exercises.

Guided Lecture Notes

ISBN – 0135189314 / 9780135189313

These lecture notes assist students in taking thorough, organized, and understandable notes while watching Author in Action videos. Students actively participate in learning the how/why of important concepts through explorations and activities. The Guided Lecture Notes are available as PDF's and customizable Word files in MyLab Math. They can also be packaged with the text and the MyLab Math access code.

Algebra Review

ISBN: 0131480065 / 9780131480063

Four printed chapters of Intermediate Algebra review available. Perfect for a corequisite course or for individual review.

Applications Index

Calculus, 543, 554, 565, 593, 612, 700, 718, 749, 773, 787

absolute maximum/minimum in, 233
area under a curve, 267, 634, 834, 848, 924
average rate of change in, 236, 353, 473, 565, 578, 600, 635, 640, 651, 659, 710, 795, 811, 861, 882, 974
carrying a ladder around a corner, 600, 649
composite functions in, 419
concavity test, 311, 956
critical numbers, 974
difference quotient in, 210, 217, 267, 324, 346, 451, 473, 490, 531, 554, 670, 821, 861, 941
discontinuous functions, 379
 e^x in, 443, 973
expression as single quotient in, 77
expressions with rational exponents in, 77
factoring in, 53, 57, 80, 465, 634, 882, 956
functions approximated by polynomial functions in, 353
increasing/decreasing functions in, 231, 311, 346, 578, 848, 949
Intermediate Value Theorem, 396, 949
local maxima/minima in, 233, 291, 501
maximizing projectile range, 676, 681
maximizing rain gutter construction, 681
partial fraction decomposition, 980, 997, 1014, 1023
perpendicular lines, 907, 932
quadratic equations in, 99–100
radians in, 520
rationalizing numerators, 907
reducing expression to lowest terms in, 71
secant line in, 236, 291, 490, 651
second derivative, 1014
Simpson's rule, 320
Snell's Law of Refraction, 650
tangent line, 542, 723, 733, 764
trigonometric expressions and functions, 638, 648, 658, 672, 674–675, 679, 682, 685, 687, 811, 834, 997

Acoustics

amplifying sound, 512
loudness of sound, 463, 514
loudspeaker, 732
sonic boom, 833
tuning fork, 732, 733
whispering galleries, 817–818

Aerodynamics

modeling aircraft motion, 799

Aeronautics

fighter jet design, 722

Agriculture

farm management, 955
farm workers in U.S., 500
field enclosure, 940
grazing area for cow, 723
milk production, 507
minimizing cost, 955
removing stump, 786–787
watering a field, 102

Air travel

bearing of aircraft, 698
distance between two planes, 269
frequent flyer miles, 708
holding pattern, 592, 649
parking at O'Hare International Airport, 251
revising a flight plan, 715
sonic boom, 833
speed and direction of aircraft, 781, 785

Archaeology

age of ancient tools, 493–494
age of fossil, 499
age of tree, 499
date of prehistoric man's death, 513

Architecture

brick staircase, 980, 1005
Burj Khalifa building, 31
Flatiron Building, 722
floor design, 978, 1005
football stadium seating, 979
mosaic design, 980, 1005
Norman window, 37, 318
One World Trade Center, 553
parabolic arch, 318
racetrack design, 820
special window, 318, 326
stadium construction, 980
vertically circular building, 190
window design, 318
window dimensions, 102

Area. See also Geometry

of Bermuda Triangle, 722
under a curve, 634
of isosceles triangle, 681
of portion of rectangle outside of circle, 530
of sector of circle, 525, 528
of segment of circle, 735
of sidewalk, 543
for tethered dog to roam, 530
of windshield wiper sweep, 528

Art

fine decorative pieces, 553
framing a painting, 146

Astronomy

angle of elevation of Sun, 697
distance from Earth to its moon, 29
distances of planets from Sun, 973
Halley's comet, 848
International Space Station (ISS), 861
light-year, 29
planetary orbits
 Earth, 820
 elliptical, 820
 Jupiter, 820
 Mars, 820
 Mercury, 848
 Pluto, 820

Aviation

modeling aircraft motion, 799
orbital launches, 879

Biology

alcohol and driving, 459, 464
bacterial growth, 492–493, 506
 E-coli, 240, 282
blood types, 1013
bone length, 326–327
cricket chirp rate and temperature, 319
healing of wounds, 449, 463
lung volume, 577
maternal age versus Down syndrome, 297
muscle force, 786
yeast biomass as function of time, 505

Business

advertising, 183, 298, 327
automobile production, 421, 895
blending coffee, 141
candy bar size, 103
checkout lines, 1032
clothing store, 1035
commissions, 326
cookie orders, 960
copying machines, 146
cost
 of can, 375, 378
 of commodity, 421
 of manufacturing, 29, 141, 386, 948
 marginal, 311, 326
 minimizing, 326, 955, 960
 of printing, 350–351
 of production, 240, 421, 922, 960
 of transporting goods, 252
cost equation, 182, 195
cost function, 290
customer wait times, 377
demand
 for candy, 196
demand equation, 326, 412
depreciation, 414, 464

discount pricing, 91, 92, 422
drive-thru rate
 at Burger King, 445
 at Citibank, 449, 463
 at McDonald's, 449–450
equipment depreciation, 990
expense computation, 142
farm workers in U.S., 500
inventory management, 272
Jiffy Lube's car arrival rate, 449, 463
managing a meat market, 955
milk production, 507
mixing candy, 141
mixing nuts, 141
orange juice production, 895
precision ball bearings, 29
presale orders, 880
price markup, 91
product design, 956
production scheduling, 955
product promotion, 183
profit, 922
 maximizing, 953–954, 955–956
profit function, 218
rate of return on, 488
restaurant management, 880
revenue, 141, 311, 324, 327, 506
 advertising, 508
 airline, 956
 of clothing store, 912
 daily, 311
 from digital music, 266
 from football seating, 991
 maximizing, 311, 317–318
 monthly, 311
 theater, 881
revenue equation, 195
RV rental, 327
salary, 422, 980
 gross, 217
 increases in, 990, 1005
sales
 commission on, 128
 of movie theater ticket, 868, 873, 879
 net, 157
salvage value, 513
straight-line depreciation, 285–286, 289
supply and demand, 286–287, 289
tax, 386
theater attendance, 92
toy truck manufacturing, 948
transporting goods, 949
truck rentals, 182
unemployment, 1035
wages
 of car salesperson, 182
 hourly, 89, 91

Carpentry. *See also* **Construction**

pitch, 184

Chemistry, 91

alpha particles, 833
decomposition reactions, 500

drug concentration, 377
gas laws, 196
mixing acids, 146
pH, 462
purity of gold, 142
radioactive decay, 499, 506–507, 513,
 514, 956
radioactivity from Chernobyl, 500
salt solutions, 142, 143, 146
self-catalytic chemical reaction, 311
sugar molecules, 142
volume of gas, 128

Combinatorics

airport codes, 1015
binary codes, 1035

Review

R

A Look Ahead →

Chapter R, as the title states, contains review material. Your instructor may choose to cover all or part of it as a regular chapter at the beginning of your course or later as a just-in-time review when the content is required. Regardless, when information in this chapter is needed, a specific reference to this chapter will be made so you can review.

Outline

- R.1** Real Numbers
- R.2** Algebra Essentials
- R.3** Geometry Essentials
- R.4** Polynomials
- R.5** Factoring Polynomials
- R.6** Synthetic Division
- R.7** Rational Expressions
- R.8** n th Roots; Rational Exponents

R.1 Real Numbers

PREPARING FOR THIS TEXT Before getting started, read “To the Student” at the front of this text.

- OBJECTIVES**
- 1 Work with Sets (p. 2)
 - 2 Classify Numbers (p. 4)
 - 3 Evaluate Numerical Expressions (p. 8)
 - 4 Work with Properties of Real Numbers (p. 9)

1 Work with Sets

A **set** is a well-defined collection of distinct objects. The objects of a set are called its **elements**. By **well-defined**, we mean that there is a rule that enables us to determine whether a given object is an element of the set. If a set has no elements, it is called the **empty set**, or **null set**, and is denoted by the symbol \emptyset .

For example, the set of **digits** consists of the collection of numbers 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9. If we use the symbol D to denote the set of digits, then we can write

$$D = \{0, 1, 2, 3, 4, 5, 6, 7, 8, 9\}$$

In this notation, the braces $\{ \}$ are used to enclose the objects, or **elements**, in the set. This method of denoting a set is called the **roster method**. A second way to denote a set is to use **set-builder notation**, where the set D of digits is written as

$$D = \{ x \mid x \text{ is a digit} \}$$

Read as “ D is the set of all x such that x is a digit.”

EXAMPLE 1

Using Set-builder Notation and the Roster Method

- (a) $E = \{x \mid x \text{ is an even digit}\} = \{0, 2, 4, 6, 8\}$
 (b) $O = \{x \mid x \text{ is an odd digit}\} = \{1, 3, 5, 7, 9\}$

Because the elements of a set are distinct, we never repeat elements. For example, we would never write $\{1, 2, 3, 2\}$; the correct listing is $\{1, 2, 3\}$. Because a set is a collection, the order in which the elements are listed is immaterial. $\{1, 2, 3\}$, $\{1, 3, 2\}$, $\{2, 1, 3\}$, and so on, all represent the same set.

If every element of a set A is also an element of a set B , then A is a **subset** of B , which is denoted $A \subseteq B$. If two sets A and B have the same elements, then A **equals** B , which is denoted $A = B$.

For example, $\{1, 2, 3\} \subseteq \{1, 2, 3, 4, 5\}$ and $\{1, 2, 3\} = \{2, 3, 1\}$.

DEFINITION Intersection and Union of Two Sets

If A and B are sets, the **intersection** of A with B , denoted $A \cap B$, is the set consisting of elements that belong to both A and B . The **union** of A with B , denoted $A \cup B$, is the set consisting of elements that belong to either A or B , or both.

EXAMPLE 2

Finding the Intersection and Union of Sets

Let $A = \{1, 3, 5, 8\}$, $B = \{3, 5, 7\}$, and $C = \{2, 4, 6, 8\}$. Find:

- (a) $A \cap B$ (b) $A \cup B$ (c) $B \cap (A \cup C)$

- Solution**
- (a) $A \cap B = \{1, 3, 5, 8\} \cap \{3, 5, 7\} = \{3, 5\}$
- (b) $A \cup B = \{1, 3, 5, 8\} \cup \{3, 5, 7\} = \{1, 3, 5, 7, 8\}$
- (c) $B \cap (A \cup C) = \{3, 5, 7\} \cap [\{1, 3, 5, 8\} \cup \{2, 4, 6, 8\}]$
 $= \{3, 5, 7\} \cap \{1, 2, 3, 4, 5, 6, 8\} = \{3, 5\}$

 **Now Work** PROBLEM 15

Usually, in working with sets, we designate a **universal set** U , the set consisting of all the elements that we wish to consider. Once a universal set has been designated, we can consider elements of the universal set not found in a given set.

DEFINITION Complement of a Set

If A is a set, the **complement** of A , denoted \bar{A} , is the set consisting of all the elements in the universal set that are not in A .*

EXAMPLE 3

Finding the Complement of a Set

If the universal set is $U = \{1, 2, 3, 4, 5, 6, 7, 8, 9\}$ and if $A = \{1, 3, 5, 7, 9\}$, then $\bar{A} = \{2, 4, 6, 8\}$.

It follows from the definition of complement that $A \cup \bar{A} = U$ and $A \cap \bar{A} = \emptyset$. Do you see why?

 **Now Work** PROBLEM 19

It is often helpful to draw pictures of sets. Such pictures, called **Venn diagrams**, represent sets as circles enclosed in a rectangle, which represents the universal set. Such diagrams often help us to visualize various relationships among sets. See Figure 1.

Figure 1 Venn diagram

If we know that $A \subseteq B$, we might use the Venn diagram in Figure 2(a). If we know that A and B have no elements in common—that is, if $A \cap B = \emptyset$ —we might use the Venn diagram in Figure 2(b). The sets A and B in Figure 2(b) are said to be **disjoint**.

Figure 2

(a) $A \subseteq B$
subset

(b) $A \cap B = \emptyset$
disjoint sets

Figures 3(a), 3(b), and 3(c) use Venn diagrams to illustrate intersection, union, and complement, respectively.

Figure 3

(a) $A \cap B$
intersection

(b) $A \cup B$
union

(c) \bar{A}
complement

*Some texts use the notation A' or A^c for the complement of A .

2 Classify Numbers

It is helpful to classify the various kinds of numbers that we deal with as sets. The **counting numbers**, or **natural numbers**, are the numbers in the set $\{1, 2, 3, 4, \dots\}$. (The three dots, called an **ellipsis**, indicate that the pattern continues indefinitely.) As their name implies, these numbers are often used to count things. For example, there are 26 letters in our alphabet; there are 100 cents in a dollar. The **whole numbers** are the numbers in the set $\{0, 1, 2, 3, \dots\}$ —that is, the counting numbers together with 0. The set of counting numbers is a subset of the set of whole numbers.

DEFINITION Integers

The **integers** are the set of numbers $\{\dots, -3, -2, -1, 0, 1, 2, 3, \dots\}$.

These numbers are useful in many situations. For example, if your checking account has \$10 in it and you write a check for \$15, you can represent the current balance as $-\$5$.

Each time we expand a number system, such as from the whole numbers to the integers, we do so in order to be able to handle new, and usually more complicated, problems. The integers enable us to solve problems requiring both positive and negative counting numbers, such as profit/loss, height above/below sea level, temperature above/below 0°F , and so on.

But integers alone are not sufficient for *all* problems. For example, they do not answer the question “What part of a dollar is 38 cents?” To answer such a question, we enlarge our number system to include *rational numbers*. For example, $\frac{38}{100}$ answers the question “What part of a dollar is 38 cents?”

DEFINITION Rational Number

A **rational number** is a number that can be expressed as a quotient $\frac{a}{b}$ of two integers. The integer a is called the **numerator**, and the integer b , which cannot be 0, is called the **denominator**. The rational numbers are the numbers in the set $\left\{x \mid x = \frac{a}{b}, \text{ where } a, b \text{ are integers and } b \neq 0\right\}$.

Examples of rational numbers are $\frac{3}{4}$, $\frac{5}{2}$, $\frac{0}{4}$, $-\frac{2}{3}$, and $\frac{100}{3}$. Since $\frac{a}{1} = a$ for any integer a , it follows that the set of integers is a subset of the set of rational numbers.

Rational numbers may be represented as **decimals**. For example, the rational numbers $\frac{3}{4}$, $\frac{5}{2}$, $-\frac{2}{3}$, and $\frac{7}{66}$ may be represented as decimals by merely carrying out the indicated division:

$$\frac{3}{4} = 0.75 \quad \frac{5}{2} = 2.5 \quad -\frac{2}{3} = -0.666\dots = -0.\overline{6} \quad \frac{7}{66} = 0.106060\dots = 0.1\overline{06}$$

Notice that the decimal representations of $\frac{3}{4}$ and $\frac{5}{2}$ terminate, or end. The decimal representations of $-\frac{2}{3}$ and $\frac{7}{66}$ do not terminate, but they do exhibit a pattern of repetition. For $-\frac{2}{3}$, the 6 repeats indefinitely, as indicated by the bar over the 6; for $\frac{7}{66}$, the block 06 repeats indefinitely, as indicated by the bar over the 06. It can be shown that every rational number may be represented by a decimal that either terminates or is nonterminating with a repeating block of digits, and vice versa.

On the other hand, some decimals do not fit into either of these categories. Such decimals represent **irrational numbers**. Every irrational number may be represented by a decimal that neither repeats nor terminates. In other words, irrational numbers cannot be written in the form $\frac{a}{b}$, where a, b are integers and $b \neq 0$.

Irrational numbers occur naturally. For example, consider the isosceles right triangle whose legs are each of length 1. See Figure 4. The length of the hypotenuse is $\sqrt{2}$, an irrational number.

Also, the number that equals the ratio of the circumference C to the diameter d of any circle, denoted by the symbol π (the Greek letter pi), is an irrational number. See Figure 5.

Figure 4

Figure 5 $\pi = \frac{C}{d}$

DEFINITION Real Numbers

The set of **real numbers** is the union of the set of rational numbers with the set of irrational numbers.

Figure 6 shows the relationship of various types of numbers.*

Figure 6

EXAMPLE 4

Classifying the Numbers in a Set

List the numbers in the set

$$\left\{ -3, \frac{4}{3}, 0.12, \sqrt{2}, \pi, 10, 2.151515 \dots \text{ (where the block 15 repeats)} \right\}$$

that are

- (a) Natural numbers (b) Integers (c) Rational numbers
 (d) Irrational numbers (e) Real numbers

Solution

- (a) 10 is the only natural number.
 (b) -3 and 10 are integers.
 (c) -3 , 10, $\frac{4}{3}$, 0.12, and 2.151515... are rational numbers.
 (d) $\sqrt{2}$ and π are irrational numbers.
 (e) All the numbers listed are real numbers.

Now Work PROBLEM 25

*The set of real numbers is a subset of the set of complex numbers. We discuss complex numbers in Chapter 1, Section 1.3.

Approximations

Every decimal may be represented by a real number (either rational or irrational), and every real number may be represented by a decimal.

In practice, the decimal representation of an irrational number is given as an approximation. For example, using the symbol \approx (read as “approximately equal to”), we can write

$$\sqrt{2} \approx 1.4142 \quad \pi \approx 3.1416$$

In approximating decimals, we either *round* or *truncate* to a given number of decimal places.* The number of places establishes the location of the *final digit* in the decimal approximation.

Truncation: Drop all of the digits that follow the specified final digit in the decimal.

Rounding: Identify the specified final digit in the decimal. If the next digit is 5 or more, add 1 to the final digit; if the next digit is 4 or less, leave the final digit as it is. Then truncate following the final digit.

EXAMPLE 5

Approximating a Decimal to Two Places

Approximate 20.98752 to two decimal places by

- Truncating
- Rounding

Solution

For 20.98752, the final digit is 8, since it is two decimal places from the decimal point.

- To truncate, we remove all digits following the final digit 8. The truncation of 20.98752 to two decimal places is 20.98.
- The digit following the final digit 8 is the digit 7. Since 7 is 5 or more, we add 1 to the final digit 8 and truncate. The rounded form of 20.98752 to two decimal places is 20.99.

EXAMPLE 6

Approximating a Decimal to Two and Four Places

Number	Rounded to Two Decimal Places	Rounded to Four Decimal Places	Truncated to Two Decimal Places	Truncated to Four Decimal Places
(a) 3.14159	3.14	3.1416	3.14	3.1415
(b) 0.056128	0.06	0.0561	0.05	0.0561
(c) 893.46125	893.46	893.4613	893.46	893.4612

Now Work PROBLEM 29

Calculators and Graphing Utilities

Calculators are incapable of displaying decimals that contain a large number of digits. For example, some calculators are capable of displaying only eight digits. When a number requires more than eight digits, the calculator either truncates or rounds.

*Sometimes we say “correct to a given number of decimal places” instead of “truncate.”

To see how your calculator handles decimals, divide 2 by 3. How many digits do you see? Is the last digit a 6 or a 7? If it is a 6, your calculator truncates; if it is a 7, your calculator rounds.

There are different kinds of calculators. An **arithmetic** calculator can only add, subtract, multiply, and divide numbers; therefore, this type is not adequate for this course. **Scientific** calculators have all the capabilities of arithmetic calculators and also contain **function keys** labeled \ln , \log , \sin , \cos , \tan , x^y , inv , and so on. As you proceed through this text, you will discover how to use many of the function keys. **Graphing** calculators have all the capabilities of scientific calculators and contain a screen on which graphs can be displayed. We use the term **graphing utilities** to refer generically to all graphing calculators and computer software graphing packages.

For those who have access to a graphing utility, we have included comments, examples, and exercises marked with a , indicating that a graphing utility is required. We have also included an appendix that explains some of the capabilities of graphing utilities. The  comments, examples, and exercises may be omitted without loss of continuity, if so desired.

Operations

In algebra, we use letters such as x , y , a , b , and c to represent numbers. The symbols used in algebra for the operations of addition, subtraction, multiplication, and division are $+$, $-$, \cdot , and $/$. The words used to describe the results of these operations are **sum**, **difference**, **product**, and **quotient**. Table 1 summarizes these ideas.

Table 1

Operation	Symbol	Words
Addition	$a + b$	Sum: a plus b
Subtraction	$a - b$	Difference: a minus b
Multiplication	$a \cdot b$, $(a) \cdot b$, $a \cdot (b)$, $(a) \cdot (b)$, ab , $(a)b$, $a(b)$, $(a)(b)$	Product: a times b
Division	a/b or $\frac{a}{b}$	Quotient: a divided by b

In algebra, we generally avoid using the multiplication sign \times and the division sign \div so familiar in arithmetic. Notice also that when two expressions are placed next to each other without an operation symbol, as in ab , or in parentheses, as in $(a)(b)$, it is understood that the expressions, called **factors**, are to be multiplied.

We also prefer not to use mixed numbers in algebra. When mixed numbers are used, addition is understood; for example, $2\frac{3}{4}$ means $2 + \frac{3}{4}$. In algebra, use of a mixed number may be confusing because the absence of an operation symbol between two terms is generally taken to mean multiplication. The expression $2\frac{3}{4}$ is therefore written instead as 2.75 or as $\frac{11}{4}$.

The symbol $=$, called an **equal sign** and read as “equals” or “is,” is used to express the idea that the number or expression on the left of the equal sign is equivalent to the number or expression on the right.

EXAMPLE 7

Writing Statements Using Symbols

- (a) The sum of 2 and 7 equals 9. In symbols, this statement is written as $2 + 7 = 9$.
 (b) The product of 3 and 5 is 15. In symbols, this statement is written as $3 \cdot 5 = 15$.

3 Evaluate Numerical Expressions

Consider the expression $2 + 3 \cdot 6$. It is not clear whether we should add 2 and 3 to get 5, and then multiply by 6 to get 30; or first multiply 3 and 6 to get 18, and then add 2 to get 20. To avoid this ambiguity, we have the following agreement.

In Words

Multiply first, then add.

We agree that whenever the two operations of addition and multiplication separate three numbers, the multiplication operation is always performed first, followed by the addition operation.

For $2 + 3 \cdot 6$, then, we have

$$2 + 3 \cdot 6 = 2 + 18 = 20$$

EXAMPLE 8

Finding the Value of an Expression

Evaluate each expression.

(a) $3 + 4 \cdot 5$

(b) $8 \cdot 2 + 1$

(c) $2 + 2 \cdot 2$

Solution

(a) $3 + 4 \cdot 5 = 3 + 20 = 23$

(b) $8 \cdot 2 + 1 = 16 + 1 = 17$

↑
Multiply first.

↑
Multiply first.

(c) $2 + 2 \cdot 2 = 2 + 4 = 6$

Now Work PROBLEM 53

When we want to indicate adding 3 and 4 and then multiplying the result by 5, we use parentheses and write $(3 + 4) \cdot 5$. Whenever parentheses appear in an expression, it means “perform the operations within the parentheses first!”

EXAMPLE 9

Finding the Value of an Expression

(a) $(5 + 3) \cdot 4 = 8 \cdot 4 = 32$

(b) $(4 + 5) \cdot (8 - 2) = 9 \cdot 6 = 54$

When we divide two expressions, as in

$$\frac{2 + 3}{4 + 8}$$

it is understood that the division bar acts like parentheses; that is,

$$\frac{2 + 3}{4 + 8} = \frac{(2 + 3)}{(4 + 8)}$$

Rules for the Order of Operations

1. Begin with the innermost parentheses and work outward. Remember that in dividing two expressions, we treat the numerator and denominator as if they were enclosed in parentheses.
2. Perform multiplications and divisions, working from left to right.
3. Perform additions and subtractions, working from left to right.
