

**Problem 1.46**

Your boss, whose background is in financial planning, is concerned about the company's high-weighted average cost of capital of 21%. He has asked you to determine what combination of debt-equity financing would lower the company's WACC to 13%. If the cost of the company's equity capital is 6% and the cost of debt financing is 28%, what debt-equity mix would you recommend?
